Not only the university in which he taught but also the State of which he was an influential citizen sustained a great loss in the death of this gentleman at Providence, February 3, 1881. A son of Ex-Governor Byron Diman, he was born at Bristol, R. I., May 1, 1831; was graduated with honors at Brown University at 20 years of age, and at Andover Theological Seminary 5 years afterwards, having meanwhile spent 2 years in European study, chiefly in Germany. On leaving Andover he became pastor of the First Congregational Church at Fall River, Mass., from December 9, 1856, to March 1, 1860; then for 4 years more presided over the Harvard Church, Brookline, Mass.; and, thus matured, was called in the summer of 1864 to the chair of history and political economy at Brown, where he had studied. There he served with such efficiency and usefulness as professor, writer, and lecturer that at his death the Providence Journal said of him: "No man living in this city or State could be counted his superior." He was a contributor to the North American and other reviews; published several interesting addresses delivered on important occasions; issued a work on The Theistic Argument in 1881; edited two volumes of Narragansett Club Publications relative to his favorite subject, history, on which he also delivered a series of lectures at Johns Hopkins University, Baltimore. His alma mater in 1870 recognized his ability and learning by bestowing on him its honorary D.D.

HON. JOSHUA BICKNELL CHAPIN.

This gentleman, a graduate of Brown University, was educated a physician, but from deficient hearing gave up his practice to devote himself to business. In 1859 he was chosen State commissioner of public schools, succeeding Hon. John Kingsbury; he held that position till 1861, and was again elected in 1863, holding to 1869. His reports for all these years were models of clearness and full of useful and practical suggestions. The need for parental coöperation with the teachers, for frequent visits by school officers and others to note and to encourage their important work, for careful selection of good sites for school-houses, for giving to the schools fair exteriors and making provision for shade and ventilation, for introducing music, and for educating well the teachers for the primary as well as for the higher schools, were matters that he presented with great force. His decisions on points of school law are highly esteemed. Besides serving as school commissioner he was also for a time editor of the Rhode Island Schoolmaster (1868 and 1869).

## CHIEF STATE SCHOOL OFFICER.

Hon. THOMAS M. STOCKWELL, *State commissioner of public schools, Providence.*

Mr. Stockwell has held the place of supervisor and visitor of the State schools, by annual election of the State board of education, from 1874 to the date at which this goes to press.

## SOUTH CAROLINA.

SUMMARY OF SCHOOL STATISTICS.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |

a United States census of 1880.

(From reports and returns of Hon. Hugh S. Thompson, State superintendent of education, for the two years indicated.)

### STATE SCHOOL SYSTEM.

#### OFFICERS.

A State superintendent of education, elected for a term of 2 years by the people at the general election of State officers, has general supervision of the free public schools and is assisted by a State board of examiners, of which he is ex officio chairman. This board is composed of the State superintendent and 4 members appointed by the governor biennially.

For each county there are a school commissioner elected at each general election and a

county board of examiners, consisting of 2 members appointed by the State board of examiners for 2 years' terms, with the county commissioner as chairman.

For each school district there are 3 school trustees appointed biennially by the county boards of examiners to look after local educational interests, under the supervision of the examiners.—(School law, 1878.)

### OTHER FEATURES OF THE SYSTEM.

In his report for 1880, the State superintendent says that there is no law in force in South Carolina regulating the school age, and the practice has been to leave attendance unrestricted. Inasmuch, however, as the school attendance is now increasing more rapidly than the school fund, he recommends that only pupils between 6 and 16 be admitted hereafter, except where others are needed to make up the number necessary to constitute a public school. The schools are sustained from the proceeds of a tax of 2 mills on $1, to be levied by the boards of county commissioners, which, with a poll tax of $1 on each voter, to be retained in the county where it is collected, constitutes the State fund for school purposes. This, under the constitution, was to go to the several school districts of the counties "in proportion to the respective number of pupils attending the public schools;" the school law of 1878 used the phraseology "the average number of pupils attending" and the act of December 20, 1881, the words "in proportion to the average attendance upon the free schools for the last preceding year." The city of Charleston levies by special law a tax of 1 mill on $1, and at least three other places, under special acts, may levy local taxes; but no general system of district taxation is in use. The length of the school session in each county is determined by the amount of State money received, and hence the average time is only between three and four months, though the constitution calls for 6 months of school. Teachers must have certificates of qualification from the State board of examiners or from that of the county where they propose to teach; in Charleston, from the city board.

### GENERAL CONDITION.

South Carolina in 1881 reported 84 more free public schools, 190 more school-houses, 91 more of them owned by districts, and 29 more built within the year, the others being either rented or gratuitously loaned. The average time of school was lengthened by about 3 days. The valuation of school property in use rose considerably, more teachers were employed, and at a slight increase of pay, with 120 more children enrolled in the free schools for whites. The enrolment in the schools for colored youth fell off by 734, a decrease in total enrolment of 614. The decrease in attendance of colored pupils, the superintendent says, was not from deficiency of educational provision for them, as 100 more teachers of that class were employed. In some counties the school commissioners reported that it was due in part to the unusually severe winter. In the one where the decrease was greatest it came partly from the fact that the school officers were endeavoring to improve the school-houses, and could only do this by using the school funds, so that little was left for tuition in them when completed. It is hoped, however, that the improvement of accommodations will tell on the attendance of succeeding years, while the fact that an institute for colored teachers was held for 4 weeks in July of 1881, with large attendance and with excellent instructors, justifies the hope of great advance in school organization, discipline, and teaching. The similar instruction for white teachers given in another institute seems likely to increase considerably the attendance in the schools for whites.

### AID FROM THE PEABODY FUND.

This State received from the Peabody trustees $4,050 for 1881, of which $1,000 went for teachers' institutes, $1,600 for teachers' scholarships at Nashville, $500 for training colored teachers at Claflin University, $450 for normal training at Hampton Institute, Va., and $250 each for public schools of Winnsboro' and Chester.

### KINDERGÄRTEN.

Only 2 of these means of early preparation for school studies appear to have existed in 1881, one at the Charleston Orphan House, another at Williamston Female College, Williamston. No statistics of these have reached the Bureau.

## CITY SCHOOL SYSTEM.

### CHARLESTON.

*Officers.*—The city of Charleston constitutes a separate school district, with a school board composed of a commissioner from each of its 8 wards, elected at every general municipal election, the board choosing its own officers, one of whom is superintendent of city schools. This board determines the studies to be pursued and the text books to

be used ; makes rules for the government of the schools ; elects and dismisses teachers, causing examinations to be made and granting diplomas to such as have prosecuted successfully the studies in a normal school department.

*Statistics for* 1880–'81.—Population by census of 1880, 49,984; there is no enumeration of the youth of school age available later than that for 1877 ; enrolled in public schools (5 in number, 3 of them for whites and 2 for colored pupils), 6,336, a decrease of 948; teachers employed, the same as in 1879–'80, 86 whites and 5 colored; average monthly pay of women, $39.23; of men, including 2 colored, $121.66; total of salaries paid, $46,171.

*Additional particulars.*—The 5 school-houses reported were, with one exception, brick, with grounds inclosed, and all said to be in good condition. Two of them stand on glebe lands, for which a rent is paid. The valuation of the 5, including furniture and apparatus, was $125,000. Another building was in progress, for use in 1882. The city high school, which charges a small fee for tuition, is not reckoned among the public schools, although a part of the city system of instruction.

Other schools in the city, not of the public system, but made in a large measure free to those attending them through aid from societies or individuals, were the Holy Communion Church Institute, for boys, with 206 pupils and 185 in average attendance; Central School (for boys), 302 pupils; average attendance, 268; Society Street School (for girls), 222; average, 180; Avery Normal Institute (for colored pupils), 439; average, 275, about one-half free through aid from the American Missionary Association (Congregational); Wallingford Academy (also for colored youth), 618; average, 489, mainly free through aid from the Presbyterian Committee of Missions for Freedmen: whole attendance in all these, 1,787; average attendance, 1,397.—(State report for 1880–'81 and city year book for 1881.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS AND NORMAL DEPARTMENTS.

There were four institutions of this class reporting for 1881, all for the training of colored teachers. There is no State normal school.

The *Avery Normal Institute*, Charleston, organized in 1865 and largely aided by the American Missionary Association, had 3 resident and 7 non-resident instructors giving instruction in primary, intermediate, and normal departments. The normal course covered 5 years; the preparatory classical, 3 years. There were 160 normal and 299 other students in attendance in 1881. Since its foundation this school has graduated 45 men and 80 women, besides giving instruction to thousands.

*Fairfield Normal Institute*, Winnsboro', organized in 1869, reported $850 received from public funds, and had 4 instructors, 72 normal and 278 other students in attendance, with 32 graduates, all of whom have since engaged in teaching.

The *Normal Department of Brainerd Institute*, Chester, reported 3 instructors and 40 students, perhaps not all strictly normal. There were 3 departments, primary, grammar, and high.

The *Normal School of Claflin University*, Orangeburg, organized in 1868, had 4 instructors and 76 normal and 52 other students. Two of the normal students graduated and engaged in teaching. The normal course covered 3 years of 33 weeks each. A model school is also reported. As before stated, $500 were granted by the Peabody fund trustees for the training of colored teachers at this school.

### TEACHERS' INSTITUTES.

The second State normal institute for white teachers was held at Greenville, August 2–30, 1881, with aid from the Peabody fund supplementing a State appropriation, and enrolled 335 teachers from 28 counties. The regular work, which was carried on in the buildings of Furman University and of the Baptist Female College, included instruction in the science of education and method of discipline, the English language, primary methods of instruction, arithmetic, and geography. Optional studies were penmanship, singing, physical geography, algebra, calisthenics, Latin, French, and German. Mr. F. Louis Soldan, principal of the City Normal School of St. Louis, Mo., had general charge of the instruction to be given, assisted by Professor Joynes, of the University of Tennessee, and by some of the most successful teachers of the State. Among the lecturers were the United States Commissioner of Education; Dr. Curry, general agent of the Peabody fund; Dr. William T. Harris, long city superintendent at St. Louis; and President Miles, of South Carolina College.

The first State normal institute for colored teachers was held in Columbia, July 5–29, 1881. The faculty was composed of colored instructors from Washington, D. C. A membership of 185 pupil teachers, who represented 25 of the 33 counties of the State, was reported. Instruction was given in methods of teaching arithmetic, reading, phonic

spelling, map and free hand drawing, penmanship, vocal music, geography, and hygiene; the grading of country schools was discussed, a programme for one of four grades being placed upon the blackboard, and much time was spent in practice teaching. Addresses were delivered by Governor Hagood, General John Eaton, and others.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

Free schools of this grade form no part of the public school system of the State. Several institutions called high schools appear in a table appended to the State superintendent's report for 1880–'81, but it is a title indicating only a higher grade of pay school. Charleston High School, for boys, reduced its annual rate from $100 to $40 a pupil, but, though it belonged to and was assisted by the city, it did not profess to receive free scholars. It enrolled 125, under 5 teachers. Its course, not long since revised, requires Latin, but allows French and German to be substituted for Greek. In the city year book for 1881 it is stated that a new site for this school, with ample grounds and buildings, had been bought, and that on these grounds a gymnasium had been built, where, under a skilled instructor, a regular course of physical exercises was to be pursued.

### OTHER SECONDARY SCHOOLS.

In the table of the State report before referred to, 33 schools of academic grade or with academic classes are presented, having 120 teachers and 2,713 pupils, besides the Charleston High School, with 5 teachers and 125 pupils.

For private academic schools, preparatory schools, and preparatory departments of colleges reporting to this Bureau, see Tables VI, VII, and IX of the appendix to this volume; for summaries of the statistics of each class, corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Seven institutions of this class continued to give instruction in 1880–'81, as well as in the opening of 1881–'82. Only 1 of them, Claflin University, Orangeburg, for colored students, was open to women, and this showed but 2 women on its collegiate roll for 1880–'81, though there were many in lower classes. Those for young men were, as before, the College of Charleston, Charleston; Erskine College, Due West; Furman University, Greenville; Newberry College, Newberry; Wofford College, Spartanburg, and Adger College, Walhalla. All, except the College of Charleston (which is a city college), were under some denominational influence; all, except Furman and Wofford, had the usual 4 years' classical course; and all appear to have had also partial courses. Furman and Wofford had their studies arranged in schools, any one of which could be entered and graduated from, or several of them could be taken in combination to form a regular A. B. course. Wofford had just adopted this arrangement in place of a fixed 4 years' course; Furman and Charleston Colleges were reorganizing their courses. Wofford College reports a legacy of $100,000 from the late Rev. Benjamin Wofford; Claflin University, donations amounting to $9,150 from Hon. William B. Claflin, of Massachusetts, Mrs. Claflin, and others.

The old University of South Carolina, suspended in 1877 and reorganized in 1878 and 1879, has been divided, the part of it designed for whites remaining at Columbia; that for colored students, at Claflin University, Orangeburg. Both are sustained out of the agricultural college fund and have the character and courses of agricultural and mechanical colleges.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Four such schools report for 1880–'81, namely: Columbia Female College, Columbia; Due West Female College, Due West; Greenville Female College, Greenville; and Walhalla Female College, Walhalla. All had arrangements for primary and academic as well as collegiate instruction, the last in courses of 3 to 4 years. Greenville offered also a graduate course of 4 years. All taught music, drawing, and painting, with French, and the two last mentioned included German. Williamston College, Williamston, in a catalogue of 1879, presented essentially the same arrangements, with Kindergarten and some polytechnic studies, and in 1880 made a return of its statistics, but makes no report for 1881. The statistics of the 4 institutions that report show 251 preparatory students, 296 collegiate, and 9 special, 556 in all, under 44 instructors. For any other information, see Table VIII of the appendix.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The *South Carolina College of Agriculture and Mechanics*, Columbia, organized in 1880 for white youths of the State, occupies the buildings of the former University of South Carolina and reports a 3 years' scientific course, with opportunity for practical instruction both on the farm and in the shop. Lecture and laboratory courses in general and agricultural chemistry are also offered. Tuition is free, except in the department of languages. Students of the college are at liberty to use the library of the university, which contains 27,000 volumes. There were 4 professors and instructors and 58 students in 1881.

The *South Carolina Agricultural College*, Orangeburg, in connection with Claflin University for colored youth, carries out the design of Congress in its grant for the endowment of such institutions by providing about 150 acres of choice land for practical instruction in agriculture and a carpenter shop for mechanical work. Scientific and industrial education are united, and the student, by labor on the farm and in the shop, may defray part of the expenses of his education. A scientific and agricultural course of 4 years is offered, requiring for admission an examination in the preparatory and normal studies of the university, which occupy 3 years.

### PROFESSIONAL.

There are two institutions giving *theological* instruction that report for 1881. Benedict Institute, Columbia, established in 1871 by the American Baptist Home Mission Society for the education of ministers of the gospel and of teachers, male and female, had 190 students, of which number 43 were in the theological department. Baker Institute, a department of Claflin University, Orangeburg, for the preparation of young men for the Christian ministry, was said in the catalogue of the university to be working successfully; but there was no note of either course or students. The Theological Seminary of the General Assembly of the Presbyterian Church South, Columbia, heretofore suspended, was to be reopened in 1882.

The *Medical College of the State of South Carolina* (regular) continued in 1881 to require 3 years of study, including 2 lecture terms of 20 weeks each. There were 77 students in 1880–'81, 30 receiving the degree of M. D. and 3 degrees in pharmacy.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The South Carolina Institution for the Education of the Deaf and Dumb and the Blind in its thirty-third annual report gives an enrolment of 43 deaf and dumb and 16 blind pupils. Advancement was reported in all departments, especially in the class in articulation. Buildings for shops were being erected, and the institution in all its appointments was said to be ready to carry on its work.

### EDUCATION OF ORPHANS.

The *Holy Communion Church Institute*, Charleston, founded in 1867, reported a principal, assisted by 14 teachers and matrons, an enrolment of 206, with an average attendance of 185. Of the 125 resident pupils 44 were beneficiary; of the 81 day scholars, 37 had scholarships.

The *Thornwell Orphanage*, Clinton, organized in 1875 under the auspices of the Presbyterian Church, receives children between the ages of 5 and 13, and permits them to remain till they are 16 or 18, when, having been trained and educated, they are enabled to find good homes. The common and some of the higher English branches are taught; also, Latin, French, and vocal and instrumental music. A new school building is contemplated, to be called the Orphans' Seminary. All the work of the institution is done by the pupils, the boys learning farming, printing, and house painting; the girls, sewing, cookery, and housework. There were 14 boys and 22 girls reported for 1881.

The *Carolina Orphans' Home*, Spartanburg, founded in 1873, is temporarily suspended.

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATIONS.

The law requires county school commissioners to encourage the holding of such associations, but no report of any meetings, except the State normal institutes for white and colored, previously noted, has been received.

## CHIEF STATE SCHOOL OFFICER.

Hon. HUGH S. THOMPSON, *State superintendent of education, Columbia.*

[Third term, January 1, 1881, to January 1, 1883.]

## TENNESSEE.

STATISTICAL SUMMARY.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| White youth of school age (6–21) | 403,353 | 402,580 | | 773 |
| Colored youth of school age (6–21) | 141,509 | 143,295 | 1,786 | |
| Whole number of school age | 544,862 | 545,875 | 1,013 | |
| Whites in public schools | 229,290 | 215,702 | | 13,588 |
| Colored in public schools | 60,851 | 67,766 | 6,915 | |
| Whole public school enrolment | 290,141 | 283,468 | | 6,673 |
| Average daily attendance, white | 150,854 | 139,469 | | 11,385 |
| Average daily attendance, colored | 40,607 | 41,040 | 433 | |
| Whole average daily attendance | 191,461 | 180,509 | | 10,952 |
| Enrolment in private schools | 41,068 | 35,054 | | 6,014 |
| Average daily attendance | 28,407 | 25,820 | | 2,587 |
| Pupils in public and private schools | 331,209 | 318,522 | | 12,687 |
| Average daily attendance in both | 219,868 | 206,329 | | 13,539 |

| STATE SCHOOL FUND. | | | | |
| Amount of permanent fund | $2,512,500 | $2,512,500 | | |

(From reports of Hon. Leon. Trousdale and Hon. W. S. Doak for the two years indicated.)

### STATE SCHOOL SYSTEM.

#### OFFICERS.

A State superintendent of schools, nominated by the governor and confirmed by the senate for a term of 2 years, has the supervision of the public school system. He must have literary and scientific attainments and skill and experience in the art of teaching. County superintendents, required to have like qualifications and elected biennially by

the county court of each county, exercise a general supervision over the schools in each county. Three school directors, elected by the people of each district for 3 years, with annual change of one, have charge of discipline in the district schools.

### OTHER FEATURES OF THE SYSTEM.

Separate public schools for whites and blacks are free to youth of school age (6–21), to ascertain the number of whom a census is taken annually. These schools are sustained from the proceeds of a State school fund of $2,512,500, bearing interest at 6 per cent., an annual poll tax of $1 on every male citizen, and a State tax of 1 mill on $1 of all property subject to taxation.

The revenues from the first source are apportioned semiannually among the counties according to scholastic population; those from the other two are retained in the counties where they are collected and are distributed among the school districts on the same basis as the State fund. If the means from these sources do not suffice to keep up a public school in each district for five months in each year, the county court must either levy an additional tax for this purpose or submit to the people a proposition to do this by vote. The same court may levy a tax to prolong the school term beyond 5 months. Teachers must have duly authorized certificates of qualification to obtain employment in the schools and receive pay for teaching, which pay is to be the same for men and women doing the same work. The studies to be pursued in every public school are definitely stated, and include the common English branches, with agriculture, elementary geology of Tennessee, and history of the United States, to which may be added vocal music and such other branches as may be provided for by local taxes or be contracted for at certain rates of pay. Where the number of pupils is sufficient, schools are to be graded according to the advancement of pupils. To further this, public scholars are allowed to be taught in higher grade private or corporate schools at public school rates. Such are called consolidated schools.

### GENERAL CONDITION.

The statistics of 1880 are for 91 counties out of 94; those of 1881, for only 89 out of 95. Taken by themselves, they seem to indicate retrogression rather than advancement; for, although there were 86 more public schools, 40 more consolidated ones, and 17 more private, with 926 more teachers, to meet an increase of 1,013 youth of school age, there appear to have been 12,687 fewer pupils attending public and private schools during the second of these years than in the first, while the number in average daily attendance fell off 13,539. School property, too, is rated in 1881 at nearly $200,000 less than in 1880, though there were improvements reported in school buildings (520 log school-houses being abandoned) and there were two more public school-houses.

It may be that some of the loss was apparent only, growing out of lack of reports, since many of the superintendents describe the condition of the schools as good and report popular sentiment with respect to them as improving. Many of the school-houses are said to have been supplied with better furniture, and progress is reported in securing uniform series of text books. The thing most needed to bring about a better condition of the State system appears to be more local taxation to supplement the State distributable school fund, thus making possible longer school sessions with better pay of teachers. Much advancement is looked for consequent on the action of the legislature of 1881, which extended to all incorporated towns the privilege of levying taxes for such purposes.

### AID FROM THE PEABODY FUND.

The trustees of this fund in 1881 furnished aid to the amount of $5,500 to this State, which was divided as follows: Normal college, $3,000; teachers' institutes, $1,500; educational journal, $200; Jackson public schools, $800.—(Report of trustees of Peabody fund.)

## CITY SCHOOL SYSTEMS.

### OFFICERS.

For cities there are boards of education, varying in number of members, elected by the people, with partial change each year. City school superintendents are elected by these boards.

### STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|
| Chattanooga | 12,892 | 3,224 | 2,334 | 1,401 | 34 | $20,796 |
| Knoxville | 9,693 | 3,044 | 1,984 | 1,458 | 29 | 15,699 |
| Memphis | 33,592 | 9,745 | 4,367 | 2,578 | 62 | 41,560 |
| Nashville | 43,350 | 14,512 | 5,845 | 4,371 | 97 | 95,609 |

ADDITIONAL PARTICULARS.

*Chattanooga* classed its schools as primary, grammar, and high, and accommodated them in 7 buildings (4 of which were owned by the city) containing 36 rooms. There were 1,480 white and 854 colored pupils enrolled during the year, a gain of 149. The schools were taught 158 days by 5 men and 29 women. School property was valued at $39,750. The high school offers a 3 years' course, including Latin and German, and had 6 graduates in 1881. An enrolment of 350 in private schools was given.—(City report and return.)

*Knoxville* had 5 school-houses containing 31 school and 2 recitation rooms, with 1,541 sittings for study, occupied by its primary, grammar, and high schools. The schools were taught 196 days by 5 men and 24 women. Private schools reported an enrolment of 120, with 100 in average attendance, taught by 2 teachers in 2 buildings, with 3 rooms and 120 sittings.—(Return.)

*Memphis* reported a school population of 5,837 white and 3,908 colored children, and had 10 school buildings (4 belonging to the city), containing 64 school rooms, with 3,780 sittings. The schools are graded as primary, grammar, and high, the course of study covering 8 years in the lower grades and 3 in the high school. A class of 21 girls and 3 boys graduated in 1881. School property was valued at $139,050. The schools were taught 164 days by 6 men and 56 women.—(City report and return.)

*Nashville* divides its schools into primary, with 3 years; intermediate and grammar, each with 2 years; and high, with a 3 years' course. It accommodated them in 13 school-houses, 9 owned by the city, containing 5,950 sittings for study. The schools were taught 182 of the 193 school days in the year by 15 men and 82 women, with special teachers for music, drawing, and penmanship. The scholastic population reported shows an increase of 2,052, while there was a decrease of 253 in enrolment. The superintendent distrusted the census and thought the apparent decrease in enrolment due to former inaccuracies in keeping the registers. Private schools occupied 9 buildings, with 24 rooms and 1,500 sittings; employed 23 teachers; and enrolled 500 pupils, with 440 in average attendance.—(City report and return.)

## TRAINING OF TEACHERS.

NORMAL SCHOOLS AND NORMAL DEPARTMENTS.

The *State Normal College*, opened at Nashville in 1875 under the sanction of the State of Tennessee, constitutes the literary department of the University of Nashville and is supported from the funds of the university, from the Peabody educational fund, and from State appropriations for scholarships. It receives from any State students of either sex desiring to qualify themselves to teach, and is substantially a normal college of high grade for the whole South. The course of study, covering 3 years, with an additional optional year for advanced work, is strictly professional, and includes instruction in the management and organization of classes and schools. Students completing the 3 years' course receive the degree of licentiate of instruction, and may teach in the public schools of their States without further examination; upon those taking the advanced or baccalaureate course, the university confers the degree of B. A. There were 56 men and 105 women in attendance in 1881, of whom 61 graduated; 6 had received academic degrees and 59 at once engaged in teaching.—(Catalogue and return.)

The Summer Normal Institute at the *University of Tennessee*, Knoxville, held in June and July, 1881, was well organized and successful and did much to elevate the standard of public school education. The whole number of students enrolled was 218, while many others were in attendance part of the session. The regular students were from 35 counties, nearly three-fourths of them being teachers in the public schools. Instruction in the branches taught in these schools comprised the regular course, while optional courses in languages, natural science, and drawing were offered. Instructive and interesting lectures on general educational topics were delivered and were free to all. Of the 65 persons who entered the examinations held at the close of the session, 17 received certificates of the first grade and 19 of the second.

There were 12 other institutions reporting normal departments or normal courses, viz: East Tennessee Wesleyan University, Athens; Humboldt Normal Institute, Humboldt; Warner Institute, Jonesborough; Knoxville College, Knoxville; Freedmen's Normal Institute, Maryville; Maryville College, Maryville; Le Moyne Normal Institute, Memphis; Morristown Seminary, Morristown; Central Tennessee College, Nashville; Fisk University, Nashville; Nashville Normal and Theological Institute, Nashville, and Winchester Normal, Winchester.

For statistics of normal schools reporting, see Table III of the appendix, and a summary of it in the report of the Commissioner preceding.

### STATE TEACHERS' INSTITUTE.

The fifth annual meeting of the State Teachers' Institute, for whites, was held at Nashville, December 27, 1881, J. Braden, D. D., of Central Tennessee College, presiding. The following papers were read: "Methods and illustrations in teaching," Prof. D. Moury; "Courses of study," Professor Tefft; "Normal school work," Prof. A. W. Farnham, of Atlanta University, Georgia, and others by President E. H. Fairchild, of Berea, Ky., Prof. A. J. Steele, and Prof. H. S. Bennett. Brief addresses were made by Dr. Ward, of the New York Independent, Ex-Governor Washburn, of Massachusetts, Rev. W. S. Doak, superintendent of public instruction for Tennessee, and Rev. O. P. F. Fitzgerald, formerly State superintendent in California.—(Indiana School Journal.)

### INSTITUTES FOR COLORED TEACHERS.

Superintendent Doak reports 3 normal institutes for colored teachers held by aid from the Peabody fund; the total attendance in these was 120. He also reports the holding of 168 county institutes, and considers these county meetings of great importance because they are the only special means of improvement within the reach of a large number of teachers. He advises the State to grant aid to these institutes.—(State report.)

### EDUCATIONAL JOURNALS.

The Educational Record, published at Nashville and Tusculum and edited by Miss Julia A. Doak, issued its first number in August, 1881. The aim was to publish a lively but earnest home journal, devoted to the educational interests of Tennessee. Dr. Curry, agent of the Peabody fund, offered some aid, and the trustees of Greeneville and Tusculum College contributed the use of their press.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The State report does not give statistics for schools of this class in 1881, but the cities of Chattanooga, Knoxville, Memphis, and Nashville report high schools. The first, third, and fourth named had 3 years' courses, including Latin. Knoxville, in a return, gives 6 teachers and 194 pupils enrolled, with 177 in daily attendance in its high school; but does not give the course of study, which in 1880 was apparently of 2 years.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, VII, IX, and X of the appendix; for summaries of the same, see corresponding tables in the report of the Commissioner preceding.

More consolidated schools are reported, where instruction in higher branches may be given if the trustees so direct, and some high school instruction is probably thus received.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The University of Tennessee, Knoxville, made a State institution in 1879 and open to men only, reports a preparatory department with 3 instructors and 92 students, and 9 professors and 141 students in the 4 years' course of the university. The degree of B. A. was conferred upon 9 young men and that of B. S. upon 8 at the close of the year 1880–'81.

Of the 16 other colleges reporting, 9 were for both sexes, 7 for men exclusively. Two reported themselves non-sectarian, 4 were under control of the Methodist Episcopal, 4 of the Presbyterian, and 2 of the Baptist Churches, while the Roman Catholic, Lutheran, Protestant Episcopal, and Christian Churches were each represented by one. Two (Central Tennessee College and Fisk University, Nashville) were for the colored race. All in the State gave some preparatory instruction and had substantially 4 years' collegiate courses, though in 6 the plan of separate schools was adopted. Fourteen had scientific courses or departments; 6 prepared for business; 11 made provision for instruction in modern languages, 5 for graduate and 6 for normal study; 10 offered biblical or theological instruction; 3 had departments of law, and 3 of medicine, 1 of these last, Vanderbilt University, Nashville, adding dentistry and pharmacy.

For statistics of colleges reporting, see Table IX of appendix, and a summary of the same in the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Of the 20 universities and colleges in the State 10 admit both sexes, Maryville College having a separate course for women. Besides these, 20 exclusively for young women

are on the lists of this Bureau (of which 16 only make report for 1881, however), all but 3 of them holding charters from the State and most of them presenting courses of 4 to 7 years. Most of them have arrangements for teaching music, drawing and painting, and modern languages; but comparatively few have had libraries of any extent or much school apparatus.

For statistics of those that report, see Table VIII of the appendix; for a summary of these statistics, a corresponding table in the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

No catalogue for 1881 has been received from the State University, Knoxville, which is also the State Agricultural College. In 1880 there were 5 technical courses of 4 years each, viz: civil engineering, mechanical and mining engineering, agriculture, and applied chemistry. There were also partial courses of 2 years each in practical agriculture and in applied mathematics. In the former, students alternated their studies with work on the farm, for which they received pay and were thus enabled to earn their board. As tuition is free to all State appointees, it is hoped that this shorter course will bring to the university a large number of the farming community. Courses in science are found in 13 of the colleges or universities, while Cumberland, Vanderbilt, and the University of the South, at Lebanon, Nashville, and Sewanee, offer courses in engineering.

For statistics of scientific schools reporting, see Table X of the appendix; for summary of statistics, the report of the Commissioner preceding.

### PROFESSIONAL.

The *theological* schools reporting for 1881 are the Theological School of Cumberland University, Lebanon (Cumberland Presbyterian); Nashville Normal and Theological Institute, Nashville (Baptist); theological departments of Central Tennessee College and Vanderbilt University, Nashville (both Methodist); Fisk University (Congregational), also at Nashville; and the theological department of the University of the South, Sewanee (Protestant Episcopal). An examination for admission is not invariably required in these schools; in the Protestant Episcopal school it is demanded by a law of the church. All report courses of study of from 2 to 4 years. The East Tennessee Wesleyan University, Athens (Methodist Episcopal); Southwest Baptist University, Jackson; Bethel College, McKenzie (Cumberland Presbyterian), and Burritt College, Spencer (Christian), all offer biblical instruction in a greater or less degree.

*Legal* instruction is given in the law school of Cumberland University, Lebanon, as well as in the law departments of Central Tennessee College and of Vanderbilt University, both at Nashville. The first was organized in 1847, and reports a 1 year's course of 40 weeks, with 45 students, of whom 32 graduated; the second, organized in 1880, has a course of 2 years of 32 weeks each, and had 4 students; the last, opened for instruction in 1875, has a 2 years' course, each year of 39 weeks, and had 53 students, 13 of them having received a collegiate degree. It graduated 18.

The regular *medical* schools reporting are Meharry Medical Department of Central Tennessee College, for colored students of both sexes; Nashville Medical College (a department of the State University), for which a new building was erected in 1881; and the medical departments of Vanderbilt University and of the University of Nashville. Meharry presents the regular 3 years' course of study, with two lecture courses of 20 weeks each, and offers an additional year's instruction without extra charge. Nashville Medical College requires for graduation 3 years of study, 2 full lecture courses of 24 weeks each, and attendance on dissections during the year. Vanderbilt requires 2 lecture courses of 20 weeks and at least 33 months' study. The University of Nashville has the same requirements as Vanderbilt. Both offer, but do not require, a 3 years' graded course, with examinations at the close of the second and third years.

Vanderbilt University and the medical department of the University of Tennessee each have departments of *dentistry*, requiring attendance on 2 lecture courses of 20 weeks each, with approved dental work, both operative and mechanical. Vanderbilt admits women to this department.

The department of *pharmacy* of Vanderbilt requires 3 hours' laboratory work daily, with attendance on 2 full courses of lectures of 20 weeks each, and a thesis, for graduation.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Tennessee School for the Deaf and Dumb, Knoxville, founded in 1845, reported 60 boys and 40 girls under instruction in the common school branches in 1881. Shoemaking and printing are taught and agriculture to a limited degree. The articulation method is used.—(Return.)

### EDUCATION OF THE BLIND.

The Tennessee School for the Blind, Nashville, in a biennial report covering 1880 (the last received), stated that the common English and some of the higher branches were taught. Special attention was paid to music, all but one of the pupils taking both vocal and instrumental lessons. Instruction in piano tuning, calisthenics, and various industrial employments was also given.

### INDUSTRIAL TRAINING.

Miss Emily L. Austin, in her report of the Knoxville Industrial School, established by her in connection with the colored public school of that city, says that the sewing school completed 329 articles and sold one hundred dollars' worth of goods to the women in the night meetings. A kitchen garden had been established and one of the scholars sent to a Philadelphia school of cookery, that he might be able to teach a class in connection with this school.—(Circular.)

### EDUCATION OF ORPHANS.

The Church Orphans' Home, Memphis, under control of the Sisters of St. Mary, founded in 1867, is the only institution of this class reporting for 1881. The children are taught reading, writing, and arithmetic, sewing, and house work. There were 46 inmates at Easter in 1881. The Canfield Orphans' Asylum, Memphis, St. Mary's Orphan Asylum, Nashville, and the Nashville Protestant Orphan Asylum have heretofore reported.

For statistics of all such institutions reporting, see Table XXII of the appendix.

## EDUCATIONAL CONVENTIONS.

### TENNESSEE STATE TEACHERS' ASSOCIATION.

This association, in connection with the West Tennessee Institute, held a very interesting and profitable meeting, attended by more than 60 teachers and superintendents, at Humboldt, December 1, 1881. The address of welcome by Hon. W. J. McFarland was responded to by S. Y. Caldwell, of the Nashville city schools, president of the association. The subjects presented for discussion were "The necessity for normal training," Superintendent J. C. Brooks; "Character building in education," Prof. J. W. Conger; "How to keep our educated young men from leaving the State," Superintendent J. R. Deason; "What shall we do for our girls?" Miss C. Conway; "Discipline," Dr. W. A. Smith; "Public schools of Tennessee," Judge Turner Foster; "Education and national prosperity," Superintendent W. S. Doak; "Practical science," Prof. N. T. Tupton; "Primary instruction," Miss Nannie Rea. Professors Newhardt, Goodman, Jones, Davis, and others took part in the discussions.—(State report.)

## OBITUARY RECORD.

### GEORGE STODDART BLACKIE, M. D., PH. D.

This eminent scholar, writer, and teacher, great grandson of James Watts of steam engine celebrity, was born at Aberdeen, Scotland, April 10, 1834. He began his education at Edinburgh and continued it at Aberdeen, subsequently studying medicine at Edinburgh and at the Universities of Bonn, Berlin, and Paris. The degrees of A. M. and M. D. and the highest honors were conferred on him by the University of Edinburgh, and later he received other honors and was made a member of various scientific societies in Scotland and in this country. After practising medicine a few years he came to Nashville, where he continued till his death, with the exception of two years spent in teaching in New York. He was professor of botany, chemistry, and natural history in the medical department of the University of Nashville, 1857, and after his return from New York in 1874 held similar positions in the Tennessee College of Pharmacy and the Nashville Medical College. Upon the organization of the medical department of the University of Tennessee he accepted the position of professor of chemistry, which he retained till his death. An author as well as teacher, he published several works on botany and other subjects, besides contributing to English and American scientific and medical journals, and for twelve years he was one of the editors of the Nashville Medical Journal. When the publication of the Southern Practitioner was contemplated the position of senior editor was accepted by him and much of its success is said to have been due to his deep culture and great ability. He was a freemason of high rank and a contributor to the literature of freemasonry. He died in Nashville, Sunday, June 19, 1881.

## CHIEF STATE SCHOOL OFFICER.

Hon. W. S. DOAK,[1] *State superintendent of public schools, Nashville.*

[Term, March 25, 1881, to March 25, 1883.]

[1] Since dead and succeeded by Rev. Gideon S. W. Crawford for his unexpired term.

## TEXAS.

STATISTICAL SUMMARY. *a*

| | 1878–'79. | 1879–'80. | Increase. | Decrease. |
|---|---|---|---|---|

| **STATE SCHOOL FUND.** | | | | |
| Amount of permanent school fund | | *i*$3,385,571 | | |

*a* Statistics for 1881 are wanting, owing to the loss by fire of the returns made to the secretary of the State board of education. Except as noted, the figures given for 1878–'79 are the statistics of 145 counties and 13 cities and towns; those for 1879–'80, of 132 counties and 18 cities and towns.

*b* For whole State, as estimated by the secretary of the State board.

*c* In 118 counties and 13 cities and towns.

*d* In 102 counties and 18 cities and towns.

*e* In 104 counties and 13 cities and towns.

*f* In 104 counties and 18 cities and towns.

*g* In 131 counties.

*h* In 124 counties.

*i* In 1878.

(From second biennial report of Hon. O. N. Hollingsworth, secretary of State board of education.)

## STATE SCHOOL SYSTEM.

### OFFICERS.

The officers who have general control of the public school interests are the governor, secretary of state, and State comptroller, who constitute a State board of education. The secretary of this board has the office duties of a superintendent of education. The administration of public school affairs in each county is in the hands of the county judge, who appoints a board of 3 examiners, consisting of 3 well educated citizens of the county. The interests of each community school are in charge of 3 trustees appointed by the county judge. In cities and towns that have assumed control of their public schools, the city council or board of aldermen have exclusive power to maintain, regulate, and govern the city schools.—(Laws, 1879.)

### OTHER FEATURES OF THE SYSTEM.

The appropriation made for the support of free public schools for 1879–'80 and 1880–'81 consisted of the net proceeds of one-sixth of the ad valorem and occupation taxes collected and of all the annual poll tax, together with the interest on the permanent school fund, however invested. The fund thus formed was to be distributed on the basis of children of school age in each community. Cities and towns controlling their own schools may, by a two-thirds vote of qualified taxpayers, at an election held for that purpose, levy such a tax (not to exceed one-half of 1 per cent.), in addition to the pro rata of the available school fund received from the State, as may be necessary to conduct the schools for ten months in the year. The council or board of aldermen are authorized to pass such ordinances, consistent with the State laws, as may be necessary to establish and maintain free schools, purchase sites, and construct school-houses. Separate schools must be opened for white and colored children, but all are entitled alike to the benefit of the available free school fund. Tuition in the common English branches is free to all children of school age. Pupils not of scholastic age may attend the community free schools upon payment of such tuition fees as may be agreed upon between the teacher and parents; but the interests of State pupils are not to be subordinated to those of private pupils.

### GENERAL CONDITION.

Owing to the burning of the returns made to the secretary of the State board for 1881, no official statement of the general condition of education in the State can be made. The Texas Journal of Education of October, 1881, in an editorial, states that there were 7,000 public free schools maintained for an average term of four months, with an average enrolment of 200,000 pupils of lawful scholastic age. The Journal of Education, October, 1881, says: "Reports received from the principal cities and towns show a largely increased attendance over the same period last year. Favorable reports have also been received from many rural districts."

### AID FROM THE PEABODY FUND.

The agent of the Peabody fund granted in 1880–'81 for the improvement of schools in Texas $10,800, divided as follows: Sam Houston Normal College, $4,500; Houston public schools, $750; Bryan public schools, $800; teachers' institutes, $2,000; educational journal, $200; Nashville scholarships for teachers to be trained at the Normal College there, $2,550.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

In cities and towns that have assumed control of their public schools the city council or board of aldermen are the legal school officers. Galveston reports a city superintendent of schools, appointed in September, 1881, and a board of trustees. Houston and some smaller towns make reports that indicate the same provision.

### STATISTICS AND ADDITIONAL PARTICULARS.

*Austin* elected a board of trustees in 1880, and in September, 1881, levied a tax of 2 mills on the dollar, which, added to the State fund and $2,000 from the Peabody fund, made $16,000, a sum sufficient to run the schools 9 scholastic months. The schools were organized by the superintendent, and 25 teachers, 16 of them ladies, began work under the new system. Schools were graded as primary, grammar, and high, allowing 4 years for each grade. The enrolment the first week was 500, but had reached 1,090 at the close of the year.—(Texas Journal of Education, January, 1882.)

*Galveston* assumed control of her public school fund in July, 1881, and immediately elected trustees and levied a special school tax of 2 mills on the dollar of assessed valuation, which, with $10,000 from the State, amounted to $42,000. A superintendent was appointed, and the schools were organized in September. Up to December 31 they had

enrolled about 1,750 pupils and 34 teachers, with an average of 85 per cent. in attendance. The school age is 6 to 16, being 4 years longer than that of the State. School property was valued at $21,000, and an estimated enrolment of 400 in private schools was reported. Regular normal institutes under the care of the superintendent are held twice a month, one for white and one for colored teachers.—(Letter from superintendent and return.)

*San Antonio* reported to the State superintendent a population of 20,550 and 27 schools maintained for 10 months. With a scholastic population of 3,603, there was an enrolment of 1,737, with 1,045 in average daily attendance.

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

Two institutions of this class were organized in 1879, one for white pupils and one for colored.

The *Sam Houston Normal Institute* (for whites), Huntsville, is not designed to be an academic high school, but a school to fit teachers for their work by practical drill in organizing and conducting schools. The requisites for admission are residence in the State, girls not to be less than 18 and boys not less than 20 years of age, and an avowed purpose to follow teaching as a profession, with a pledge to teach as many sessions in the public schools of this State as the pupil attends at this institute. All pupils must also sustain a satisfactory examination in the branches taught in the public free schools. The State has increased its annual appropriation to $18,000 and the Peabody fund granted a donation of $9,000, enabling the institution to receive 4 State pupils from each senatorial district. Tuition and books are free to all who may attend; board and lodging are also free to State pupils for one year, an incidental fee of $4 a session being the only outlay required from them. The course of study covers two years, with an additional year for advanced work if desired. Two graduates are selected each year to receive advanced instruction at the expense of the Peabody fund in the Normal College at Nashville, Tenn. A model school composed of the resident children of Huntsville has been organized as a regular department of the institute. There were 7 resident instructors, 200 students, (including 50 model school children), and 70 graduates reported for 1881. All the graduates subsequently engaged in teaching.—(Texas Journal of Education.)

The *State Normal School of Texas for Colored Students*, Prairie View, organized under an act of the legislature by the board of directors of the Agricultural and Mechanical College in 1879, receives 1 student from each senatorial district and 3 from the State at large free of all expense to the students. In January, 1881, there were 40 State, 6 pay, and 3 local students in attendance.

### OTHER NORMAL SCHOOLS AND DEPARTMENTS.

The only schools of this class reporting for 1881 are Tillotson Collegiate and Normal Institute, Austin (1881), and Whitesboro' Normal, Whitesboro' (1880). The former, under the auspices of the American Missionary Association, is for colored pupils, and has primary, grammar, normal, preparatory, and collegiate departments. The normal course covers 4 years and requires thorough preparation in the grammar department for admission. A total attendance of 252 was given for 1881; of that number 31 were normal students. The Whitesboro' Normal has primary, grammar, and collegiate departments, and after 1880–'81 was to have a normal class. From the American Normal School, Kellyville, no information has been received.

Mansfield College, Mansfield, for both sexes, and Soule College, Chappell Hill, for young women, offered normal training, and Marvin College, Waxahachie, announced that a department for such instruction would be organized and made as efficient as possible in 1881–'82.

### TEACHERS' INSTITUTE.

The secretary of the board of education, by means of aid granted from the Peabody fund, inaugurated on the 4th of July, 1881, seven normal institutes, which lasted from 5 to 6 weeks, with an aggregate attendance of 451. The one at San Marcos, with 110 teachers in attendance, was the largest; the one at Orange, with 30 present, was the smallest of 6 reported. The work in all was encouraging, and arrangements were made for holding similar meetings in 1882.

### EDUCATIONAL JOURNAL.

The Texas Journal of Education, a paper devoted to public school interests, begun in August, 1880, and continued through 1881, was published at Austin. O. N. Hollingsworth, secretary of the State board of education, has been the editor, assisted by Mrs. Hollingsworth. Many subjects of educational importance are ably discussed. Normal schools and institutes, as well as all means for the aid and improvement of the teachers, receive special attention.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

Information in regard to schools of this class is even more meagre than in former years. In 1879–'80 it was known that such schools were sustained in Brenham, Denison, Houston, and San Antonio. In 1881 Weatherford reported a class in the first grade of the high school and Austin a 4 years' course, but no statistics for that grade.

### OTHER SECONDARY INSTRUCTION.

For information as to business colleges, private academies, and preparatory departments of colleges reporting, see Tables IV, VI, and VII of the appendix; for summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Of 11 institutions of this class in the State, 9 present statistics for 1880–'81, and another (St. Joseph's College, Brownsville) reports that it had been closed and its buildings used for a yellow fever hospital. It was not to be reopened till 1883. The remaining one (Salado College) has made no report of courses since 1873, and none of statistics since 1878. Of the 9 reporting, Southwestern University, Georgetown (Methodist Episcopal South), and Marvin College, Waxahachie (non-sectarian), gave instruction in schools of English, Latin, Greek, mathematics, &c. Baylor University, Independence (Baptist), at the date of its latest catalogue, appeared to have the same arrangement. St. Mary's University, Galveston (Roman Catholic), makes report of preparatory students only. The other 5, all with arrangements for preparatory study and generally with the customary 4 years of collegiate study, were Henderson College, Henderson (non-sectarian); Mansfield Male and Female College, Mansfield (non-sectarian); Austin College, Sherman (Presbyterian); Trinity University, Tehuacana (Cumberland Presbyterian), and Waco University, Waco (Baptist). The last two mentioned, admitting women, had special courses for them, as well as commercial courses; Henderson and Marvin, also admitting them, allowed such courses. For statistics of those that have reported, see Table IX of the appendix; for a summary of them, a like table in the report of the Commissioner preceding.

The State University has been located at Austin, on a site of 40 acres set apart many years ago, with its medical department at Galveston. The board of regents met and organized in November, 1881, at which meeting they established the several departments of the university, defined the general plan of the buildings, and provided for advertising for plans and specifications for the same.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Besides 6 of the colleges above mentioned that admit women to like privileges with young men, 13 schools claiming collegiate rank, 7 of them chartered, are on the lists of this Bureau. Four of these 7 report for 1881 a total of 34 instructors, with 197 preparatory and 268 collegiate students. Another reports 17 instructors and 103 students, without distinguishing the preparatory and collegiate. All the 5 taught music, drawing, and (with one exception) painting, giving instruction also in French and German, to which 2 added Spanish. The courses in most of these schools are fairly advanced for a comparatively new region, and some compare well with those in the older States.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The Agricultural and Mechanical College of Texas, College Station, organized in 1876 on the basis of the congressional land grant, with 7 schools, has undergone a radical change in its plan of instruction and is in reality now a school of agriculture and mechanics. The course of instruction embraced 2 courses for theoretical and practical professional training in agriculture and mechanics of 4 years each, in 1880–'81. The freshman year is the same for both. By an act of the legislature of March, 1881, there are to be 3 students from each senatorial district, appointed by the senators and representatives and maintained and instructed free of charge. The State students are assigned a course of study in accordance with their appointment; pay students may make their own selection, but no other distinction is made. The study of ancient and modern languages is optional, but must not interfere with the regular course. The farm of 2,416 acres, with 230 acres fenced, has some good stock, improved machinery, an orchard, a vineyard, and vegetable garden. There are also connected with the college well equipped chemical and physical

laboratories, with the necessary apparatus, a drawing academy well fitted out, a complete set of meteorological instruments from the United States Signal Office, a series of shops, with a steam engine and the latest and most approved kinds of tools and machinery, and many other things necessary for practical illustration and instruction in the branches taught. There were 127 students reported, all taking the full course, under 9 instructors.

#### PROFESSIONAL.

*Theological* departments are reported in Baylor University, Independence (Baptist), and in Trinity University, Tehuacana (Cumberland Presbyterian). Both have full 2 years' courses. The former reports 2 professors and 7 students; the latter, 1 professor and 19 students.

There are no schools for *legal* training reporting, nor in 1881 does there seem to have been any for instruction in *medicine*, the Texas Medical College and Hospital, Galveston, the only medical school in the State, having suspended its teaching work because of the intention of the regents of the State University to locate the medical school at Galveston.

## SPECIAL INSTRUCTION.

#### EDUCATION OF THE DEAF AND DUMB.

The Texas Institution for the Deaf and Dumb, founded in 1856, reported the school in successful operation in November, 1881, with 6 teachers and 94 pupils, about 30 per cent. receiving instruction in articulation. This institution is connected with the State board of printing, the State printer giving instruction in that art to the pupils. The printing office of the institution is a source of revenue to the State. Shoemaking, farming, and gardening are also taught to the boys, while the girls learn sewing and housework.—(Report.)

#### EDUCATION OF THE BLIND.

The Texas Institution for the Blind in 1880 reported 13 instructors (3 of them blind), 10 employés, and 84 pupils. There are 3 departments: literary, musical, and mechanical. In the first the common school branches, ancient and modern history, natural philosophy, and natural history were taught; in the second, vocal and instrumental music; in the third, broom, mattress, and pillow making, cane seating, piano and organ tuning and repairing, cutting and sewing, both by hand and machine.—(Report.)

## EDUCATIONAL CONVENTIONS.

#### STATE ASSOCIATION.

A called session of the State Teachers' Association was held at Austin, January, 1881, in the interest of higher education. A memorial embodying a plan of organization for the State University was submitted to the governor. The report of the State board of education was discussed and adopted as a report of the committee of the association on changes in school laws. A resolution urging the inauguration of a system of county superintendency was discussed and unanimously passed.

A regular annual meeting of the State educational association to convene at Corsicana, in June, 1881, was announced, but no report of the proceedings is at hand.

## CHIEF STATE SCHOOL OFFICER.

Hon. O. N. Hollingsworth, *secretary State board of education, Austin.*

Mr. Hollingsworth, who entered office in 1874, has been succeeded by Hon. B. M. Baker.

# VERMONT.

## STATISTICAL SUMMARY.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| Youth of school age (5 to 20) | a99,463 | | | |
| Public school enrolment | 75,238 | 75,646 | | 592 |

| Amount of available school fund | $669,087 | $669,087 | | |

a United States census of 1880.

(From reports of Hon. Edward Conant, State superintendent of education, for the two years indicated.)

## STATE SCHOOL SYSTEM.

### OFFICERS.

A State superintendent of education, elected by the legislature at each biennial session, has general charge of school interests. Local officers are county examining boards of 3 members, appointed by town superintendents for the examination of teachers; town superintendents, elected annually by the people; and in towns where the district system has been abolished boards of 3 or 6 directors elected for 3 years, and in districts a moderator, a clerk, a collector of taxes, a treasurer, 1 or 3 auditors, and a prudential committee of 1 or 3 elected by the people for one year. Any town having a high or central school or schools must elect for such high school a prudential committee of not more than 3 to hold office 3 years, 1 going out each year. A law of 1880 gives women the same right as men to hold offices relating to school affairs, also to vote in school district meetings and for town clerks, school commissioners, and superintendents.

### OTHER FEATURES OF THE SYSTEM.

Public schools are supported by district and town taxation, the income of town school funds and of the United States deposit fund. The interest on the last is apportioned

on the basis of population. One-half the town school moneys is apportioned according to the number of children between 5 and 20 attending public schools, the other half among the districts equally without regard to population, except when the sum amounts to $1,200 or more, in which case two-thirds of it are apportioned on the basis of attendance. Towns failing to assess school taxes forfeit to the county a sum equal to double the amount required to be raised by such tax, with costs. Each town must sustain one or more schools in which the common school branches are taught, including free hand drawing, history, the Constitution of the United States, and good behavior. The attendance of children between 8 and 14 is compelled for at least 3 months in the year unless they have been otherwise instructed. The employment by manufacturers of children between 10 and 14 that have not attended the public schools at least 3 months during the preceding year is forbidden. Parents, guardians, and employers render themselves liable to a penalty of from $10 to $20 for an infraction of the law. Any town may establish one or more higher schools if the voters desire it. Teachers must have legal certificates of qualification to teach in order to be entitled to pay from public funds; and they must make report of school statistics annually to the district clerk or forfeit their pay. Town superintendents must report annually to the State superintendent, and the latter biennially to the legislature. The State superintendent is required to hold annual county institutes for teachers whenever so requested in writing by a certain number of teachers, and when not so requested he may hold educational meetings if in his judgment it shall seem best.—(Revised school law.)

### GENERAL CONDITION.

The statistics presented show that 1,094 more pupils were in average attendance on the public schools than in 1879–'80, although there were 6 fewer school districts reported and 36 fewer public schools, bringing the reported enrolment 592 below that of the preceding year. The number of teachers employed (comprising fewer men and more women) was greater by 93; the number who had attended Vermont normal schools was greater; the average monthly pay of men was increased by $1.92, and that of women, already smaller than elsewhere in the United States, was decreased by 60 cents. Less money by $7,033 was expended for all public school purposes, although $37,340 more were received for them.

The ungraded district schools, in which are enrolled about six-sevenths of the pupils attending public schools, are not accomplishing, it is said, what they should. One of the reasons given for this is the collection of population in business centres, leaving the rural districts thinly populated and reducing the size of the district schools. The pupils being young and taxes high, cheap teachers are too frequently employed. School-houses and surroundings are often neglected and pupils leave at an early age. In some instances these hindrances have been overcome by a few energetic persons, and so a number of the best schools in the State are among the ungraded. In these districts school-houses are well cared for, good teachers are employed, and wise supervision is given. But such instances are exceptional. A majority of the ungraded schools greatly need improvement and public sentiment demands that it be made. Among desirable changes in the course of study the superintendent suggests the simplification of text books on arithmetic and the omission of many unimportant details in geography and history, thus saving time for reading and language lessons and elementary work in the natural sciences.

Graded schools have been steadily increasing in number during the last 30 years and now enroll over 10,000 pupils. There has also been an improvement in these schools, particularly in primary departments. It is suggested, however, that in these schools there may be danger of crowding the courses of study too full, of giving too much attention to routine, and thus of sacrificing the interests of the scholar to the system.—(State report.)

## CITY SCHOOL SYSTEMS.

### OFFICERS.

Burlington has a board of school commissioners of 6, 1 from each of the 5 wards and the city superintendent as president; Rutland, a board of education of 9 members; and in both cities there are school superintendents.

### STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|
| Burlington | 11,365 | a3,258 | 1,425 | 33 | $19,629 |
| Rutland Village | 7,502 | ..... | 1,059 | 18 | ..... |

a In 1878.

ADDITIONAL PARTICULARS.

*Burlington* ranked its schools as primary, intermediate, grammar, and high. It also maintained two evening schools. Out of the 33 teachers in 1881, 24 were holders of high school, normal school, or collegiate diplomas, though only 2 of them were from the normal schools of Vermont. Special teachers of drawing, writing and book-keeping, and of vocal music were employed in addition to the 33 enumerated, and also 6 pupil teachers as there was occasion for them. Enrolment and average attendance increased, and tardiness diminished. Corporal punishment was rarely inflicted. A taste for reading was encouraged and good books were supplied.

*Rutland* had 12 schools, graded as primary, secondary, intermediate, grammar, and high. The superintendent, in the interests of school improvement, advises more thorough examination of teachers, their permanent employment, an increase in the pay of women, and a change from the district to the town system.

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

The three normal schools, at Castleton, Johnson, and Randolph, are only in a certain sense State institutions. The State owns no property in them and they are not under its exclusive control, but a certain amount of money is appropriated to them each year. This, in 1880–'81, amounted to $7,300. Each school receives $250 every half year and $250 more on condition that the trustees furnish a like amount for current expenses. The State also pays for one scholarship from each town at the rate of $24 a year. As the number of scholarships applied for exceeded that of the towns and doubts had arisen as to the method of distribution, a more definite legal enactment was called for. The Johnson and Randolph schools report 359 normal students (all but 96 of them women) and 51 graduates. The school at Castleton sends no statistics for 1880–'81, because of a change of principal without transfer of records. Each school has 2 courses of study, elementary and advanced. Graduates from the first receive a State license to teach in the public schools for a term of five years. Those from the second receive a license to teach for 10 years.

### TRAINING SCHOOL DEPARTMENTS OF GRADED SCHOOLS.

Departments for instructing teachers may be organized and conducted under the general direction of the State superintendent in graded schools situated in counties in which there is no normal school. The certificates of graduation have the same power as normal school certificates.

### TEACHERS' INSTITUTES.

The law requires the State superintendent to hold a teachers' institute in each county if he be requested to do so in writing by 25 teachers or in sparsely settled counties by 15; and, if in his judgment it be best, he may hold from 2 to 5 educational meetings in counties where teachers have not requested institutes. He may employ assistants and spend $12 of the public money for each meeting.

Institutes and other educational meetings were held in all the counties during the two years covered by the report, but their statistics for 1880–'81 cannot be given, not being reported apart from those of the other year. In March, 1881, at a meeting of the superintendents of Chittenden County, it was voted to hold an educational meeting in every town of the county during the year, and such meetings were actually held in 11 towns.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

Provision is made for instruction in the higher branches in any district having more than one school, subject to the will of the voters of the district; and any town may by vote establish one or more central schools for advanced pupils. Arrangements are made, too, under certain circumstances, by prudential committees, for the instruction of public school pupils in academies.

There were during the year 1,818 pupils attending public high schools, of whom 700 studied Latin or Greek or both, 117 were graduated, and 59 fitted for college. Many persons disapprove of the prominence given to classical studies in these schools and urge the greater importance of the sciences as the basis of industrial pursuits; while, it is said, the professions are overcrowded, there is a demand for skilled workmen, and the useful artisan must have a knowledge of scientific methods.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, and VII of the appendix, and for a summary, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

The *University of Vermont*, Burlington (non-sectarian), offers departments of study in the arts, in applied science, and in medicine, the first two being open to young women on the same terms as to young men. The department of arts comprises the usual course in languages, mathematics, physical sciences, mental, moral, and political philosophy, rhetoric, literature, and history. For admission to the academic department applicants must be at least 16 years old, must pass an examination in English studies, mathematics, and Latin and Greek, or have certificates from some preparatory school whose course of study is approved. In the latter case they are on probation during the first term. The scientific and medical departments of the university will be noted further on.

An addition of about 300 volumes was made to the library during the year, more than half of them public documents. The museum, also, received a number of interesting additions, among them a collection of Indian curiosities made by Capt. O. B. Read, Eleventh United States Infantry, illustrating the usages and habits of the Indians of the Northwest. But the most considerable gift received during the year was one of $50,000 from John P. Howard, esq., of Burlington, for the endowment of a chair of natural history. The surplus of the income above the salary is to be applied to the enlargement of the cabinets and the library.

*Middlebury College*, Middlebury (Congregationalist), exclusively for young men, received gifts amounting to $87,000 during the year.

### SUPERIOR INSTRUCTION OF YOUNG WOMEN.

Besides the opportunities for a higher education afforded young women in the State University, one institution exclusively for them is reported, the Vermont Methodist Seminary and Female College, Montpelier. It is authorized to confer degrees, and presents 7 distinct courses of study, among them a classical and a Latin scientific, each of 4 years. The modern languages, business, and music also receive special attention.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

The *State Agricultural College of Vermont*, a department of the State University, provides courses of study in agriculture and related branches, chemistry, engineering, and mining, leading to the degrees of PH. B., C. E., and M. E. Applicants for admission must be at least 15 years old and must pass an examination in the common English branches, algebra through quadratic equations, and plane geometry. A winter course has been arranged for the benefit of farmers who cannot attend in the summer or autumn. In this the aim is to give only a general outline of the subjects treated, to point out the best methods of study and most trustworthy sources of information, to stimulate and guide private study, and thus prepare the way for more intelligent work on the farm.

*Lewis College*, formerly Norwich University, Northfield, for 1880–'81 reports 20 pupils in a 4 years' scientific course of study and 4 graduates who received the degree of B. S., a library numbering about 4,000 books, and grounds and buildings valued at $20,000.

For further statistics, see Table X of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

### PROFESSIONAL.

No *theological* or *legal* schools report from this State.

The *medical* department of the University of Vermont, Burlington, reports for 1881 a class of 171 (the largest that ever attended the institution) and 50 graduates out of 56 candidates for graduation. In the regular course, the lecture terms of which occupy only 17 weeks each, the seven required branches of medical science are treated. Candidates for graduation must have attended at least two lecture courses and must have studied medicine 3 years, including the 2 required lecture terms. Chemical work is not obligatory, nor is a knowledge of medical botany essential to a diploma, and no examination for admission is required. In addition to the regular courses, lectures are given on a variety of medical topics by distinguished specialists, and a preliminary course lasting nearly 5 months may be attended. Ample opportunities for clinical study are afforded by the Mary Fletcher Hospital, whose grounds adjoin those of the university.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

Vermont has no institution for the instruction of the deaf, the blind, or the feeble-minded, but makes provision for their education in the American Asylum, Hartford,

Conn.; the Clarke Institution for Deaf-Mutes, Northampton, Mass.; the Perkins Institution and Massachusetts School for the Blind, Boston; and the Massachusetts School for the Feeble-Minded, Boston.

According to a report from the deputy secretary of state, there were maintained during two years at the American Asylum 17 deaf-mutes and at the Clarke Institution, 4, making 21 in both, at a cost to the State of $7,120.37; at the Perkins Institution, 8 blind pupils, at a cost of $4,850; at the Massachusetts School for the Feeble-Minded, 3, at a cost of $2,316.96.

### REFORMATORY TRAINING.

The Vermont Reform School, Vergennes, gives instruction to boys and girls in the common English branches and geometry; also, in farm, shop, and house work, besides the religious and moral training, which is considered more important than all else. There were 102 under instruction during 1880–'81, committed by the county and city courts and by parents and guardians. All were native born and all boys but 19. This school desires not to be classed with penal institutions, its design being not to punish, but to educate and preserve.

### EDUCATION OF ORPHAN AND DEPENDENT CHILDREN.

Two institutions for orphan and destitute children, the Providence Orphan Asylum (Roman Catholic) and the Home for Destitute Children (non-sectarian), both at Burlington, had a total of 172 children under instruction during the year. The Home for Destitute Children is supported by an endowment and contributions; admits children one to ten years of age, instructing them in the common English branches and in cane seating. Providence Orphan Asylum is supported by voluntary gifts; admits children two to ten; and, besides the common English branches, teaches them farming and housework.

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATION.

The thirty-first annual meeting of the Vermont Teachers' Association was held at Northfield, August 10–12, 1881. After an address of welcome by Rev. W. S. Hazen and response by President Cilley, a paper on "The province of the State in education," by Rev. George B. Gow, D. D., was read. On the following day an address was delivered on "The spiritual significance of education," by Principal O. S. Johnson, Bakersfield. "How can the standard of qualification for teachers be raised?" was discussed by Prof. Charles N. Dole and others. Mr. Dole thought the first thing is to create a popular demand for better teachers; another recommended a change in the methods of examination of teachers. In the afternoon an address was delivered by Rev. J. D. Emerson, entitled "The interrogation point," in which it was urged that teachers should study to make themselves perfect in the art of asking questions. Principal Edward Conant, of Johnson, read a paper on the position of the high school and academy in the school system, and Rev. H. T. Fuller, principal of St. Johnsbury Academy, objected to normal departments in connection with academical institutions. J. J. Randall, superintendent of schools, Rutland, made some remarks to show the desirability of paying more money for better teachers. George A. Brown, of Bellows Falls, urged the necessity of a high and definite aim in teaching. Hon. Justus Dartt, State superintendent of education, spoke on the ungraded schools of the State; and President H. M. Buckham, of the University of Vermont, on "The moral hygiene of the school." On Friday morning, after a business session, in which reports were made by committees and officers were elected for the ensuing year, a paper on "The life and work of Mrs. Fannie K. Kyle" was read by Miss Alice M. Guernsey, of Saxton's River. Rev. H. T. Fuller, of St. Johnsbury Academy, presented a paper entitled "Among the schools of Europe," and Lyndon A. Smith, of Norwich, now connected with the United States Bureau of Education, a paper on "The teacher's need and means of growth."

### VERMONT COLLEGE OF TEACHERS.

The above organization, incorporated in 1881, was formed by the leading educators of the State for the advancement of educational interests. One of its aims is to secure the recognition of teaching as a profession, "and make prominent the distinction between the teacher and the educational tramp." The first public meeting was advertised to be held August 9, 1881, but no account of its proceedings has been received.—(Journal of Education.)

## CHIEF STATE SCHOOL OFFICER.

Hon. JUSTUS DARTT, *State superintendent of education, Ascutneyville.*

[First term, December, 1880, to December, 1882; second, to December, 1884.]

## VIRGINIA.

STATISTICAL SUMMARY.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|

b Including balance on hand from previous year of $221,669.

(From returns and reports of Hon. William H. Ruffner, superintendent of public instruction, for the two years indicated.)

## STATE SCHOOL SYSTEM.

### OFFICERS.

The free school system is administered by a superintendent of public instruction, elected by the general assembly for 4 years; a State board of education, composed of the superintendent, the governor, and the attorney general; county superintendents, appointed by the State board and confirmed by the senate for 4 years; district school trustees, appointed by a school trustee electoral board composed of the county superintendent, the county judge, and the county attorney; and subdistrict school directors.

### OTHER FEATURES OF THE SYSTEM.

The public schools are free to all persons of school age residing within the school district; but white and colored persons are taught in separate schools. The number of free schools is regulated, according to the funds available for the purpose, by the State board of education, whose duty it is to guard against so great a multiplication of schools as will lower the character of instruction. Where the number of children is sufficient, preference is given to graded schools. The schools receive for their support (1) State funds, embracing the annual interest of the literary fund, a capitation tax not exceeding $1 on all men over 21, and a property tax of not less than 1 nor more than 5 mills on $1 (as the general assembly shall from time to time order); (2) county funds, embracing fines, penalties, and donations, and a tax not to exceed 10 cents on $100; and (3) district funds, embracing fines, penalties, and a tax not to exceed 10 cents on $100. Cities of the first class (those having a population of 10,000 or upwards) and cities and towns of the second class (comprising all other cities) may levy, for the support of public free schools, a tax not to exceed 3 mills on $1 and a capitation tax not to exceed 50 cents for all purposes. The State fund is apportioned by the State superintendent of public instruction among the several counties and cities on the basis of the number of children from 5 to 21, as ascertained by a census taken every five years and by the best official authority at other times. School districts, to receive State money, must provide school-houses, furniture, and all necessary appliances, and no school may receive State funds that has not been taught 5 months during the year. Teachers' certificates, good for 1 or 2 years, according to the ability, experience, and success of the applicants, are given by the county superintendents. From among the number holding such certificates teachers are chosen by subdistrict directors; but they are employed by the district trustees. Each county superintendent is required to hold at least one teachers' institute during the year, which the teachers are expected to attend; and, if this attendance should cover any part of a school term, they are not to lose pay for the time spent at the institute.

### GENERAL CONDITION.

Asked by the State superintendent whether any progress was made in 1881 in school organization or methods of teaching, a majority of the county superintendents answer affirmatively, some of them reporting decided progress and improvement, especially in the schools whose teachers attended the normal institutes. A comparison of statistics for 1880 and 1881 shows a positive gain at almost every point, the most noticeable facts being an increase of 18,310 in enrolment and of 6,083 in average attendance, which was met by an increase of 528 schools. An increase of 29 in the number of graded schools and of 877 in the number of pupils studying higher branches also marks improvement in teaching. The normal institutes held by means of aid from the Peabody fund in 1880 and 1881 have been a great benefit to the schools by improving the methods of instruction in them. The State superintendent hopes to interest the legislature in these schools, so as to secure State aid for them.

### AID FROM THE PEABODY FUND.

Aid to the amount of $5,150 was received by this State in 1880–'81. Of this the sum of $3,000 was expended for teachers' institutes; $1,450 for scholarships, to enable selected Virginia teachers to study at the Normal College, Nashville, Tenn.; $200 for the Educational Journal; and $500 for Hampton Normal Institute.

### KINDERGÄRTEN.

Three schools of this class report for 1881: the American Kindergarten, Lynchburg; Portsmouth Kindergarten, Portsmouth, and American Kindergarten, Richmond, with an aggregate attendance of 48 children. For full statistics, see Table V of the appendix; for a summary, see the report of the Commissioner preceding.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

Cities not divided into wards constitute a single district; in cities divided into wards, each ward constitutes a school district. The control of school affairs is in the hands of a school board composed of not more than 3 trustees from each district.

All cities of 10,000 or more inhabitants must (and all others may) have a city superintendent of schools, appointed by the State board of education, subject to confirmation by the senate.

### STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Public schools. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|---|
| Alexandria *a* | 13,659 | 4,582 | 21 | 1,204 | 911 | 19 | $10,712 |
| Danville *b* | 7,526 | ..... | 15 | 994 | 508 | 15 | 11,856 |
| Lynchburg *a* | 15,959 | 4,907 | 32 | 1,872 | 1,171 | 31 | 41,590 |
| Norfolk *b* | 21,966 | 6,706 | 28 | 1,642 | 1,169 | 26 | 16,988 |
| Petersburg *a* | 21,656 | 7,203 | 28 | 2,083 | 1,518 | 28 | 17,232 |
| Portsmouth *a* | 11,390 | 3,210 | 14 | 997 | 575 | 14 | 8,670 |
| Richmond *c* | 63,600 | 21,536 | 133 | 6,993 | 5,739 | 143 | 91,616 |

*a* From city return. *b* From State report. *c* From city report.

### ADDITIONAL PARTICULARS.

*Alexandria* valued its school property in 1881 at $49,400 and reported 4 school buildings, with 21 rooms and 1,150 sittings for study. The schools were graded as primary and grammar, pupils in the seventh grammar grade receiving instruction in some of the higher English branches, such as physical geography, algebra, and geometry. The length of session was 180 days; 5 men and 14 women were employed as teachers. There was a gain of about 4 per cent. in enrolment of white and of 35 per cent. in enrolment of colored pupils, the latter attributed to the closing of a Protestant Episcopal church school for colored pupils and of one or two private schools. The average attendance of colored childen, notwithstanding a severe winter, increased nearly 37 per cent., a greater ratio than the increase in enrolment, while the average attendance among whites increased only 2 per cent. There were 629 cases of corporal punishment reported as against 1,073 for 1880, and 1,019 cases of tardiness against 916 for 1880. An estimated enrolment of 1,100 is given for private schools.—(City report).

*Danville* reported through the State superintendent graded schools for both white and colored children. Those for whites, with 7 grades, were taught by 8 teachers for 10 months, with an enrolment of 414 and an average daily attendance of 223; those for colored had also 7 grades, with 7 teachers, a session of 6 months, and an enrolment of 580, with 285 in average attendance.—(State report.)

*Lynchburg* reported 5 buildings, with 32 rooms and 1,350 sittings, valued at $56,000. The schools are graded as primary, grammar, and high, and were taught 194 days by 1 colored and 7 white men, 4 colored and 20 white women. An enrolment of 119, with an average attendance of 88, was given for the high school. Private schools enrolled 500.—(State report and return.)

*Norfolk* reported to the State superintendent 18 public schools for whites and 10 for colored, taught for 190 days by 18 white and 8 colored teachers. The schools are graded and under the charge of 5 principals for white and 2 for colored. The average monthly pay of men teaching was $80.12, and of women, $52.63.

*Petersburg* reported 6 school-houses containing 28 rooms, valued, with sites, furniture, &c., at $57,000. The 4 schools for whites are graded as primary, grammar, and high; the 2 for colored, as primary and grammar. The whole enrolment of whites was 33½ per cent. of the school population, that of colored, 25½, while 93.3 per cent. of average daily enrolment of whites and nearly 94 per cent. of the average daily enrolment of colored were in average daily attendance. The schools were taught 185 days by an efficient corps of teachers, 16 women and 12 men, besides a principal and special teacher of penmanship. The superintendent reports the schools as improving at all points. An estimated enrolment of 1,200 is given for private schools.—(City report and return.)

*Portsmouth* reported 14 primary schools, 10 for white and 4 for colored children, accommodated in 3 school-houses, with 14 rooms, and valued its school property at $15,500. The schools were taught 202 days by 14 white teachers, 4 men and 10 women. There were 819 enrolled in private schools.—(State report and return.)

*Richmond* expended $18,766 for the construction and improvement of school buildings and for school furniture, and valued its entire school property, thus improved, at $279,081.

Thirteen school-houses were reported, 8 for white and 5 for colored pupils; 12 of these contained 82 white and 51 colored schools, divided into 91 primary and 40 grammar grades, with two high schools, taught by 126 white and 17 colored teachers. With a school population of more than 20,000 and an enrolment of 6,993, there were sittings for only 6,549, showing the need of greater accommodations. The schools were in session for 9 months. The average daily attendance in this year, as in other years, was good, averaging 94.4 per cent. in white schools and 97 per cent. in colored on the average monthly enrolment. The high school for whites, with an enrolment of 282 pursuing a 3 years' course (including Latin, modern languages, and some branches of natural science), had 15 graduates, 13 girls and 2 boys, in 1881. The colored normal school reported a 3 years' English course of a lower grade than the high school; as the model school in connection with it has been discontinued for want of room and the normal instruction is limited, the superintendent recommends a further course of normal instruction for its graduates as well as for those of the high school; with an enrolment of 290, there were 10 graduates, 8 young men and 2 young women.—(City report.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

The normal schools reporting for 1881 are Bridgewater Normal School, organized in 1873; Hampton Normal and Agricultural Institute, organized in 1868 for colored and Indian students; St. Stephen's Normal School, Petersburg, organized in 1871 for colored youth; and the Richmond Normal School for colored. The first mentioned reports 87 students, but makes no distinction as to what number were in the normal department. Hampton had 48 instructors in all its departments, 305 normal students, 80 Indians, and 41 graduates from the 3 years' normal course, of whom 38 engaged in teaching. St. Stephen's Normal, under control of the Protestant Episcopal Church, reported 7 instructors and 250 students in all departments, 25 of them in the normal course. The Richmond colored normal is a part of the public school system of that city and had 66 normal students, of whom 9 graduated.—(Returns.)

### GENERAL TEACHERS' INSTITUTES.

The Virginia State Institute for Colored Teachers was held in the buildings of the Agricultural and Normal Institute, Hampton, June 28 to July 15, 1881, with an aggregate attendance of 141. The exercises were conducted by Prof. H. P. Warren, of the New Hampshire State Normal School, assisted by Misses Reed and Cate, of the same institution, and Mr. J. Freeman Hall, of Dedham, Mass. The entire time of the institute was devoted to discussions on the development of reading, number work, geography, language, and, to some extent, map drawing.

Two normal institutes for white teachers were held in 1881, one at Abingdon, in the buildings of Martha Washington College, the other at Front Royal. The former was conducted by Dr. M. A. Newell, of Maryland, assisted by Mr. J. P. Thomas, principal of Bethel Public School, Richmond; Mr. J. G. Swartz, principal Lexington Public School, and Miss Annie Ruffner, daughter of Superintendent Ruffner, a graduate of the New Jersey State Normal School. The enrolment, during the 4 weeks the institute lasted, reached 287, with an average attendance of 265, representing 25 counties. The work was divided into general, class, and optional exercises and lectures. General exercises consisted of singing and morning devotions, learning selections from the best English authors, the study of history by topics, and lectures on some point of school management or methods of teaching; the "grading of country schools" was a topic discussed with great interest. Class exercises consisted in class recitations, for which the students were divided into sections; geography and map drawing, arithmetic, grammatical analysis, object lessons, and reading were the principal subjects taken up. The optional exercises (singing, calisthenics, literary and musical soirées) took place out of school hours and were largely attended. Seven evening lectures, three by State Superintendent Ruffner, interested the citizens as well as members of the institute.

The Front Royal Institute was conducted during its 4 weeks' term by Dr. Edward Brooks, of the State Normal School at Millersville, Pa., assisted by Profs. E. O. Lyte, G. W. Hull, J. W. Lansinger, and Miss M. Frances Boice. The work was divided into general exercises and class drills. The principal lectured three-quarters of an hour every morning on subjects connected with the science and art of teaching. Class drills in grammar, vocal music, mathematics, geography, history, object lessons, reading, and elocution were given daily. The teachers formed a reading club, which met out of school hours; also, a glee club. These contributed to the evening entertainments frequently given. State Superintendent Ruffner and others delivered lectures. There were 265 in attendance on this institute, including teachers from 53 counties, 10 county and several city superintendents.—(State report.)

### COUNTY INSTITUTES.

A rule of the State board of education requires the holding of at least one teachers' institute a year in each county by the county superintendent. Of the counties and cities reporting to the State superintendent 21 held no institute, while 33 held more than one, Lynchburg reporting 14, Petersburg 10, and Alexandria 9.—(State report.)

### EDUCATIONAL JOURNAL.

The Educational Journal of Virginia is a monthly publication issued at Richmond. Its general department is devoted to education and literature and its official department, edited by the State superintendent, gives full information in regard to the State system. It is the official organ of the State Teachers' Association as well as of the State superintendent. It was in its twelfth volume in 1881.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The higher branches may be introduced into any school with the sanction of the county school board, and may be discontinued at the option of the board. The State superintendent reports 8,139 pupils studying higher branches, an increase of 877 over the previous year, but gives no definite information as to high schools established. The cities of Danville, Lynchburg, Norfolk, and Richmond reported high schools in 1880, while Liberty, Lynchburg, Petersburg, Richmond, Staunton, and Winchester report such schools for 1881, or grades that imply the existence of them. The Petersburg school had 109 pupils; the Richmond high school for whites, 282; the Richmond colored normal school, which appears to serve more as a high school for the colored race, 290, of whom 66 were reported as normal students. Cumberland College and Turkey Cove Seminary, Lee County, ranked among the State graded schools (probably as private schools receiving public pupils), also indicate high school grades.

### OTHER SECONDARY SCHOOLS.

For statistics of business colleges, private academic schools, and preparatory departments of colleges, see Tables IV, VI, and VII of the appendix. For summaries of their statistics, see the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### UNIVERSITIES AND COLLEGES FOR YOUNG MEN.

The University of Virginia, Albemarle County (non-sectarian and supported in part by the State), is free to students from Virginia over 18 years of age, and offers to successful candidates, residence immaterial, at a competitive examination, 11 scholarships good for 1 year, divided among its various departments. The undergraduate studies are arranged in 12 schools, viz: Latin, including instruction in Sanscrit; Greek, including Hebrew, if desired; modern languages (including French, German, Italian, Spanish, and Anglo-Saxon); moral philosophy; history, general literature, and rhetoric; mathematics, pure and mixed; natural philosophy; general and applied chemistry; applied mathematics; analytical and agricultural chemistry; agriculture, zoölogy, and botany, and natural history and geology. There are also departments of medicine, law, and agriculture. An aggregate of 357 students in all schools and departments was given.

In 1877 Mr. Leander J. McCormick, of Chicago, offered to the university a great refracting telescope which he had had constructed at a cost of nearly $50,000, on condition that the funds necessary to erect an observatory and endow a chair of astronomy be raised by the university. In April, 1881, it was announced that the amount had been raised, Mr. W. H. Vanderbilt, of New York, contributing $25,000 and other friends residing in the State giving $50,000. Mr. McCormick then added $18,000 for the erection of the observatory, which was commenced at once.

To the museum of natural history and geology provided for by Mr. Lewis Brooks, of Rochester, N. Y., in 1875, at a cost of $68,000, and since improved by others at a further cost of $12,000, Mr. Brooks's brothers are reported by the visitors of the university in 1880–'81 to have added a valuable botanical collection by a gift of $4,000.

Of the 6 other institutions of this class reporting for 1881, the Randolph Macon College, Ashland; Washington and Lee University, Lexington; and Richmond College, Richmond, arrange the courses of study, like the University of Virginia, in separate schools. Emory and Henry College, Emory; Hampden Sidney College, Hampden Sidney; and Roanoke College, Salem, have preparatory departments and a 4 years' classical course, with opportunity for some scientific study. William and Mary College, Williamsburg, is understood to have almost wholly suspended its instruction from want of funds.

For statistics of the several institutions, see Table IX of the appendix; for summary of these statistics, the report of the Commissioner preceding.

INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

For names and full statistics of institutions for the higher education of young women, see Table VIII of the appendix, and a summary thereof in the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

Scientific instruction is found in 3 of the regular colleges reporting, Emory and Henry College offering a 3 years' scientific course and Washington and Lee University and the University of Virginia courses in civil engineering and general science, the last named adding mining engineering and a course in agriculture, zoölogy, and botany of 2 to 3 years, with a well stocked museum for illustration of the instruction given and an experimental farm for practice.

The separate scientific schools reporting for 1880–'81 are (1) the Virginia Agricultural and Mechanical College, Blacksburg, organized in 1872, which offers free tuition to State students, enjoys part of the congressional land grant, and has a scientific course of 4 years, leading, with practical work on the farm and in the shop, to the degree of graduate in agriculture or in mechanics; (2) Hampton Normal and Agricultural Institute, Hampton, which, organized in 1868 for the education of the colored race and since opened to Indians also, receives the benefit of a portion of the land grant and offers a 3 years' course, the first 2 years including elementary studies and the last higher mathematics and some scientific instruction, as well as opportunity for practice on the farm, in the household, and in the shops; (3) the Virginia Military Institute, Lexington, founded in 1839, which receives an annual appropriation for its support from the State and provides for one State cadet from each senatorial district. A 4 years' course includes instruction in the natural sciences, civil and military engineering, and mechanical drawing. A graduate course in a special school of applied science is also offered.

The Polytechnic Institute, New Market, has not reported since 1880.

For statistics, see Table X of the appendix; for a summary of them, the report of the Commissioner preceding.

### PROFESSIONAL.

The *theological* schools reporting are Union Theological Seminary, Hampden Sidney (Presbyterian), 1824; Richmond Institute, Richmond (Baptist), 1867; Theological Seminary of the Evangelical Lutheran General Synod South, Salem, 1832; and the Protestant Episcopal Theological Seminary of Virginia, Theological Seminary P. O., 1823. An examination for admission of applicants who are not college graduates is required by all and full 3 years' courses are offered. At the last named there is also a preparatory course. Richmond Institute, which is for colored students, has 3 years' preparatory and 3 years' academic courses before the theological. For statistics, see Table XI of the appendix, and for a summary, the report of the Commissioner preceding.

The institutions having a department for *legal* instruction are Richmond College, the University of Virginia, and Washington and Lee University. All offer a 2 years' course, which, at the option of the student, may be completed in one year, although the full 2 years' course, of 9 months each year, is advised. Washington and Lee University permits students devoting 2 years to the course in law to pursue certain academic studies at the same time, without additional expense. For statistics, see Table XII of the appendix; and for summaries of them, the report of the Commissioner preceding.

*Medical* instruction is given in the medical department of the University of Virginia and in the Medical College of Virginia, Richmond. Both have graded courses of 2 years (each of 9 months) and daily examinations on the studies of the preceding day and course. In the former no examination for admission is required, and students able to pass examination on the studies of the 2 years may graduate in one year. The latter requires one year's study with a reputable physician before admission, as well as attendance on 2 full lecture courses, and will admit no student to examination for the degree who has not dissected for at least one session.

*Pharmaceutical* students, by attendance on the lectures of the Medical College of Virginia, after passing a satisfactory examination, may receive a diploma in pharmacy.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The Virginia Institution for the Deaf and Dumb and the Blind, Staunton, founded in 1839, has received since that time 530 deaf-mute and 253 blind students. The depart-

ment for the deaf and dumb for 1881 reports 96 pupils taught the common English branches, history, free hand drawing, and painting in oil; also, carpentry, painting, shoemaking, printing, cabinet making, bookbinding, sewing, and fancy work. The department for the blind had 32 pupils receiving instruction in a full course of common and higher English branches, French, and vocal and instrumental music; also, instruction in broom making, cane seating, mattress making, fancy and bead work.

### INDUSTRIAL TRAINING.

The *Hampton Normal and Agricultural Institute*, for Indian and negro students, gives instruction in various industries. The students work on the farm, in the sawmill, in the brickyard, in the shops at trades, in the sewing and tailoring departments, in the household and in the kitchen garden, receiving pay for their labor. They were enabled in 1881 to earn $24,898, which sum, with the addition of a small amount paid by some students, was sufficient, as tuition is free, to cover the expense of board, clothing, &c., for all colored students.

The *Miller Manual Labor School*, of Albemarle, so named after the late Samuel Miller, under whose will it was established, combines training in industries with study in the school. The latter is attended to from 8 to 1 o'clock on all school days, with half an hour of recess; the former occupies about two hours of the afternoon. Every boy is expected to work in the shop, in the printing office, on the farm, or in the garden, learning the use of mechanical tools, the best modes of feeding and caring for stock, of cultivating orchards, vineyards, gardens, and lawns; of planting crops, tending and gathering them; of setting type, printing books, and managing a telegraph—all with a view to preparation for earning an honest livelihood. The endowment of the school is ample, its buildings are good, and its officers of high repute for excellence. Its immediate benefits are limited to children 10 to 14 years of age of the county in which it is, who are either orphans or of parents unable to educate them. Since its organization, in 1878, there had been 124 received, of whom 100 were on the roll in 1881, under a superintendent and 4 instructors, with a matron.—(Report and return, 1881.)

Five orphan asylums send returns for 1880–'81. All seem to be exclusively for girls, and teach sewing and household work in addition to the elementary English branches. One at Lynchburg was handsomely endowed by Mr. Samuel Miller, before spoken of, and he was buried in its grounds. One in Lawrenceville, Brunswick County, with 90 boys and 135 girls, under 2 teachers, was for the education and elevation of the destitute children of the old plantation negroes of that region. For statistics of all that report them, see Tables XX and XXII of the appendix.

## EDUCATIONAL CONVENTIONS.

### VIRGINIA STATE EDUCATIONAL ASSOCIATION.

The sixteenth annual meeting was held in the hall of the Norfolk College for Young Ladies, July 5–6, 1881, and discussed such topics as the true sphere of the association, the geological and mineral interests of Virginia as affecting the future status of its schools, the practical utility of natural history in developing the industrial resources of the State, the educational needs of southern women and the means of meeting them, English language and literature, Greek, Latin, modern languages, algebra, geometry, &c. Secondary education received considerable attention, and was referred to a special committee for further consideration and for report at the next meeting. The need of endowment funds for educational institutions was dwelt upon by Professor Dreher, of Roanoke College, and legislation by Congress and by State legislatures for the support of schools and for the education of the people through them found an eloquent advocate in Hon. John Goode, of the Committee on Education and Labor of the United States House of Representatives.

The meeting is said to have been more numerously attended than the last, and the speakers were almost wholly representative men, of large ability, including Superintendent Ruffner and professors and principals of important educational institutions of the State. The meeting for 1882 was appointed to be held at Charlottesville, August 21 and 22.

## CHIEF STATE SCHOOL OFFICER.

**Hon. WILLIAM H. RUFFNER, *State superintendent of public instruction, Richmond.***

**[Third term, March 15, 1878, to March 15, 1882.]**

**Hon. Richard R. Farr has been chosen by a new legislature to succeed Dr. Ruffner.**

## WEST VIRGINIA

### SUMMARY OF EDUCATIONAL STATISTICS.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| White youth of school age (6–21) | 202,364 | 205,087 | 2,723 | |
| Colored youth of school age (6–21) | 7,749 | 8,104 | 355 | |
| Whole number of school age | 210,113 | 213,191 | 3,078 | |
| Whites enrolled in public schools | 138,779 | 141,319 | 2,540 | |
| Colored enrolled in public schools | 4,071 | 3,884 | | 187 |
| Whole public school enrolment | 142,850 | 145,203 | 2,353 | |
| Average daily attendance, white | 89,022 | 88,807 | | 215 |
| Average daily attendance, colored | 2,682 | 2,459 | | 223 |
| Whole average daily attendance | 91,704 | 91,266 | | 438 |
| SCHOOL DISTRICTS AND SCHOOLS. | | | | |
| School districts (former townships) | 363 | 365 | 2 | |
| Subdistricts in these | 3,529 | | | |
| Public high schools | 8 | 11 | 3 | |
| Public graded schools | 103 | 93 | | 10 |
| Public union schools | 20 | 12 | | 8 |
| Public ungraded schools | 3,680 | 3,796 | 116 | |
| Whole number of public schools | a3,811 | 3,912 | 101 | |
| Average time of school in days | 99 | 97 | | 2 |
| Frame and log school-houses | 3,458 | 3,604 | 146 | |
| Brick and stone school-houses | 99 | 100 | 1 | |
| Whole number of public school-houses | 3,557 | 3,704 | 147 | |
| School-houses built during the year | 152 | 167 | 15 | |
| Valuation of school property | $1,670,535 | $1,753,144 | $82,609 | |
| TEACHERS AND THEIR PAY. | | | | |
| Men teaching in public schools | 3,104 | 3,079 | | 25 |
| Women teaching in the same | 1,030 | 1,208 | 178 | |
| Whole number of teachers employed | 4,134 | 4,287 | 153 | |
| Average monthly pay of white men | $27 70 | $27 96 | $0 26 | |
| Average pay of white women | 29 28 | 28 70 | | $0 58 |
| Average pay of colored men | 29 22 | 27 37 | | 1 85 |
| Average pay of colored women | 28 72 | 24 70 | | 4 02 |
| RECEIPTS AND EXPENDITURES. | | | | |
| Whole receipts for public schools | $791,083 | $855,466 | $64,383 | |
| Whole expenditures for same | 716,864 | 761,250 | 44,386 | |
| STATE SCHOOL FUND. | | | | |
| Whole permanent fund reported | $423,989 | $441,947 | $17,958 | |

a Including the above 20 public union schools.

(From report of Hon. B. L. Butcher, State superintendent of free schools, for the two years indicated.)

## STATE SCHOOL SYSTEM.

### OFFICERS.

For the State these continued to be a superintendent of free schools, chosen by the people for the term of 4 years; a State "board of the school fund," consisting of the governor, superintendent, auditor, and treasurer; a board of regents of the State normal school, consisting of the State superintendent and one person appointed by the governor from each congressional district; and a board of regents of the university, containing one person from each senatorial district, also appointed by the governor.

For each county there continued to be a superintendent of free schools, elected by the voters every 2 years, and a county board of examiners, consisting of the county superintendent and 2 experienced teachers, chosen by the presidents of the district boards of education in the county. For each school district in the county there was chosen by the people a board of education of 3 members, to continue in office 2 years.[1] For each subdistrict into which a district may be divided, there were 3 trustees appointed by the district board of education. Directors of a high school formed by the concurrent action of 2 or more districts are selected or removed at the discretion of the boards of education of said districts.

### OTHER FEATURES OF THE SYSTEM.

The State schools are free to all youth 6 to 21 years of age in the districts where established. Sufficient primary schools are to be provided for the instruction of all youth in the district entitled to attend; but separate schools for white and colored children are the rule, and there are separate funds for each. The elementary English studies only are required to be taught, but boards of education may add other studies. High and graded schools are authorized in districts where they are needed, subject, in all cases, to the vote of the people in said district whenever an additional tax is involved. Only duly licensed teachers are to be employed, who must keep the required registers of attendance, of studies, and of the number engaged in each, and make the required monthly and term reports to the secretaries of their respective boards, or forfeit the pay due them at the time. The school month consists of 22 days; the year for teaching, of 4 such months, unless a vote of the people in a district should call for a longer term. The free schools are sustained from the proceeds of a fund derived from the sale of United States land warrants; by an annual tax of 10 cents on the $100, with $1 capitation tax on each male citizen; by the proceeds of forfeitures, confiscations, and fines of the previous year; and by the income from such bank stock and United States bonds as may be held by the board of the school fund; while districts are required to raise enough, with the aid of the State money, to keep the primary schools open for at least 4 months in the year, the district tax in any year, however, not to exceed 50 cents on the $100, and the fund thus raised being used exclusively for teachers' salaries. For school-houses and all expenses beyond teachers' salaries, 40 cents on the $100 may be levied; while, for graded schools beyond the primary, 15 cents on the $100 and, for a high school, 30 cents on the $100 are allowed.—(School laws.)

### GENERAL CONDITION.

According to the State superintendent's review of the year, the outlook of popular education in the State was never brighter. The signs of general progress were the demand for better teachers; an increase, in some localities, of teachers' salaries; an improvement in methods of teaching; an increased interest on the part of parents; and improved school buildings, with better furniture and apparatus. The legislature of 1881 increased the duties and compensation of county superintendents, which resulted in an increased number of county educational meetings. That the colored people may have well trained teachers of their own race, the same legislature provided for the free education of 18 colored students at Storer College, Harper's Ferry, the selection to be made by the State superintendent from 9 appointment districts.

The statistics of 1880–'81, as compared with those of 1879–'80, show that, with an increased school population of 3,078, there was an additional enrolment of 2,353. The scholars were well provided for in 116 more ungraded and 3 more high schools, public graded schools, however, falling off 10. The average school term was 2 days shorter. Female teachers increased by 178 and the whole number of teachers by 153, a fair proportion to the new school-houses and enrolment. In the valuation of school property there was a gain of $82,609; in receipts, of $64,383; in expenditures, of $44,386; and in permanent fund, of $17,958. The only falling off, besides those before mentioned, was a decrease of 187 in colored pupils enrolled; of 438 in whole average daily attendance, about equally divided between whites and colored; of 25 in the number of male teachers, made up by an increase of females employed; and a slight decrease in the average monthly pay of teachers.

[1] Since changed to 4 years for the president and another member of the board.

### PEABODY FUND.

The amount given to the State in 1881 was $2,000, to be used in aid of teachers' institutes and of normal schools for the training of teachers.

### NEW SCHOOL LEGISLATION.

The colored people of the State having been to a large extent without competent teachers of their own race, the legislature of 1881 introduced into the school law a provision that the State superintendent of free schools should make arrangements with some suitable institution of learning in the State for the normal training of a number of colored school teachers, bearing to the colored population of the State a proportion equalling that borne to the white population by the non-paying white students in the State normal schools, the sum to be paid for each of these new pupils not to exceed that for each non-paying white pupil. The law was promptly carried into effect through an appropriation made for the purpose by the legislature.

A considerable revision of the general school law also appears to have been made, increasing the duties and compensation of county superintendents and making the pay of teachers largely depend on the grade of their certificates of qualification.

## CITY SCHOOL SYSTEM.

### WHEELING.

*Officers.*—At the latest date of definite information the officers continued to be a board of education of 3 members from each subdistrict, with a superintendent of the city school district, appointed by the board and required to have had at least 3 years of successful practice in graded schools.

*Statistics.*—Wheeling, with a population of 30,737 in 1880–'81, had 10,673 children of school age, averaging 10½ years old, the males and females being of nearly equal numbers, with only 270 colored youth. Of these, 4,917, or 46 per cent., were enrolled, while 3,156 were in average daily attendance, which, although only 30 per cent. of the school population, was 64 per cent. of the enrolment. There were 8 brick school buildings, containing 8 graded schools, with 93 teachers, 83 holding first grade and 10 second grade certificates. School property was valued at $236,680, while expenditures for the year amounted to $60,248.

*Additional particulars.*—According to a new plan of organization and course of study, adopted in 1881, the highest department of each school is to be called a grammar school, all the subordinate departments are to constitute a primary school, and each is to bear the name of the subdistrict in which it is located. The grammar schools are to be of 4 grades, each covering a year; the primary, of 4 divisions, each with as many grades or sections as the superintendent may deem necessary or expedient. No high school is provided for, but the studies of the grammar grades include several subjects usually in a high school course, without, however, any foreign language.—(State report for 1881.)

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

The normal school of the State, established under act of 1867 as a department of *Marshall College*, Huntington, is under the control of a board of regents, assisted by a local committee. The same is the case with its 4 branches at Fairmont (1869), West Liberty (1871), Glenville, and Shepherdstown (1873). The course of study in each school continued to be of 3 years. Upon its completion normal diplomas are granted by the State superintendent under authority of the regents, the holders of them, however, to be subject to examination by the county superintendents after 1882. Tuition and books were free to State students agreeing to teach 1 year in the free schools of the State. To these schools 600 students, divided among the counties according to population, may receive appointments. Boys appointed must be 14 and girls 13 years of age.

*Storer College*, Harper's Ferry (1867), besides affording preparatory and academic courses for colored pupils, gives normal training, and for 1880–'81 reported 8 instructors and 170 normal students, including 18 selected colored teachers supported by the State. Of the whole, 13 were graduated, 10 of whom engaged in teaching. This college had a library of 3,100 volumes, increased by 200 during the year, while instruction was given in drawing and in vocal and instrumental music.

*Bethany College* offered in 1880–'81 a teachers' course in natural philosophy of 6 to 10 weeks, affording laboratory work in verification and illustration of the instruction given.

### TEACHERS' INSTITUTES.

During 1881 there were 60 county and 5 district institutes held, with a total enrolment of 4,410 and an average daily attendance of 4,078. This remarkable attendance

was attributed to the compulsory provision of the institute law and the employment of well known competent teachers, while out of these gatherings came an improved condition in school affairs. The 5 district institutes were held at Parkersburg, Fairmont, Charlestown, Lewisburg, and Wheeling, each continuing 5 days, under the personal supervision of the State superintendent, with Prof. E. V. De Graff, of Paterson, N. J., and Prof. J. J. Ladd, of Staunton, Va., as instructors at the first 4 mentioned, and several other distinguished teachers at the last. The expenses, except the janitor fees, were paid from the Peabody fund. These were regarded as the most successful institutes ever held in the State.

#### WEST VIRGINIA SCHOOL JOURNAL.

A useful paper under this title issued its first monthly number in November, 1881. Besides many articles for the benefit of teachers, it presents much interesting information as to current school matters in the State.

## SECONDARY INSTRUCTION.

#### FREE HIGH SCHOOLS.

The law of the State authorizes the organization of high schools in single districts or in 2 or more combined districts where there are advanced students needing the higher instruction of such schools. Eleven were reported for 1880–'81, a gain of 3 on the previous year, but, as then, without statistics of attendance, &c.

#### OTHER SECONDARY SCHOOLS.

For business colleges and private academic schools, see Tables IV and VI of the appendix; for preparatory departments of colleges, see Table IX; for full summaries of the statistics of each class of schools, corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

#### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

*West Virginia University*, Morgantown, 1867 (non-sectarian), continued in 1880–'81 its classical, scientific, engineering, and military courses of 4 years each, with a course in agriculture of 2 years, while those of law and medicine were not yet fully developed. It also provided a preparatory course of 2 years and an optional one of select studies for such as might not desire a full course in any of the regular ones; also, a free course of 1 year in vocal music. During the year there were 12 instructors, with 97 preparatory and 58 collegiate students, a gain of 30 over the previous year. There were 5,000 volumes in the library, which was increased by 250 during the year. University property was valued at $110,000, with a productive fund of $109,000, and, for the year, a State appropriation of $11,500.—(Catalogue and return.)

*Bethany College*, Bethany (Christian), in 1880–'81 continued its classical, scientific, and ministerial courses of 4 years each and 3 special courses in engineering, physics, and chemistry, with an academic preparatory course of 2 years, in some cases reduced to 1 year; also, irregular and graduate courses—all being open equally to both sexes. There were 8 instructors, with 67 students. Graduated since the opening of the college, 575.—(Catalogue and return.)

*West Virginia College*, Flemington (Free-Will Baptist), offered preparatory, academic, classical, philosophical, literary, normal, and musical courses of 3 years each, with undefined commercial, military, and select courses. It reported 11 instructors and 30 students in the freshman class, with college property valued at $15,000, and 600 volumes in the library.—(Catalogue and return.)

*Shepherd College*, Shepherdstown (non-sectarian), presented no definite collegiate course, though it offered collegiate instruction to follow the normal course mentioned under Training of Teachers. Two instructors, with 71 normal students, male and female, were reported for 1880–'81.—(Catalogue.)

#### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

West Virginia and Shepherd Colleges continued to admit women to equal privileges with men and Bethany College had opened its doors to them.

For institutions at Clarksburg, Parkersburg, and Wheeling admitting women only, see Table VIII of the appendix; for a summary of the statistics, the report of the Commissioner preceding.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

*West Virginia University* continued to offer in 1880–'81 its previously mentioned scientific course of 4 years for the degree of B. S.; an engineering course, in which the studies of the first 3 years are the same as in the scientific, while the senior year is devoted to studies belonging directly to that department, including civil and military engineering; and an agricultural course of 2 years.

*Bethany College* also offered a scientific course of 4 years; a special course in engineering, with no fixed time; a teachers' course in natural philosophy of 6 to 10 weeks; and a special course in practical chemistry.

For statistics of each college, see Table X of the appendix; for a summary of the statistics of all reporting, see the report of the Commissioner preceding.

### PROFESSIONAL.

*Theological.*—As far as known, the ministerial course in Bethany College affords the only theological instruction in the State. The course of 4 years embraces the school of sacred literature, of ancient languages, of mathematics and astronomy, of natural science and mental philosophy, belles lettres, and political economy. It reported 8 students.

*Legal.*—In the West Virginia University, the full legal course embraced common, statute, and mercantile law, equity, and evidence, with constitutional and international law, these last not required of students fitting themselves for ordinary practice. Besides daily examinations, there were term examinations at the close of each session, certificates of distinction being given to those whose entire examinations had been uniformly good. The course appears to cover the university year.— (Catalogue.)

*Medical.*—This department of the same university continued in 1880–'81 its lectures on anatomy, physiology, and hygiene, the class being made up of those in the junior college class who were required to study anatomy and physiology as a part of their course, of certain State cadets who elect to take this course, and of regular medical students. The interest taken in this course of study, shown by punctual attendance and evident comprehension of the instruction given, was very gratifying. The course of instruction begins with the winter term, in November, and continues to the close of the university year, in June.—(Catalogue.)

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The West Virginia Institution for the Deaf and Dumb and the Blind, Romney (1870), gave in its report for the two years ending in September, 1880 (the last received), 163 deaf-mutes and 54 blind youth as having been instructed in the ten years of its work. Of these, 93 deaf-mutes and 31 blind pupils had been graduated or regularly discharged, many of whom were then self supporting and industrious men and women. In 1879–'80 there were 94 deaf and dumb and 36 blind inmates, a total of 130. For 1880–'81 a return gives 30 blind pupils under 3 teachers, and the American Annals of the Deaf and Dumb gives 78 as the whole number of deaf-mutes at the close of 1881, with 6 teachers. The common English branches were taught, including drawing for the deaf-mutes, selected classes from whom received special instruction in articulation and lip reading, while the studies for the blind reached the higher branches and music. The industries were carpentry, cabinet work, shoemaking, tailoring, broom and mattress making, chair caning, and printing. The mattress, broom, and chair shops were reserved for the blind boys, while the girls made all their own clothing and the underwear of the boys. The course of instruction covers 8 years, and in the blind department extends from the embossed alphabet up through all the grades of the highest academic branches, while the deaf-mute is confined to the study of language until he has acquired a sufficient knowledge of it to begin the study of the ordinary school branches.—(Biennial report and return.)

## EDUCATIONAL CONVENTION.

### WEST VIRGINIA EDUCATIONAL ASSOCIATION.

No information has reached this Bureau in reference to a meeting of this body in 1881.

## CHIEF STATE SCHOOL OFFICER.

Hon. BERNARD L. BUTCHER, *State superintendent of free schools, Wheeling.*

[Term, March 4, 1881, to March 4, 1885.]

## WISCONSIN.

### STATISTICAL SUMMARY.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| Youth of school age (4–20) | 483, 229 | 491, 358 | 8, 129 | |
| Public school enrolment | 299, 457 | 300, 122 | 665 | |
| Average daily attendance | 197, 510 | 190, 878 | | 6, 632 |
| Youth attending private schools | 25, 938 | 26, 252 | 314 | |
| Attending State normal schools | 1, 880 | 1, 898 | 18 | |
| In academies and business colleges | 2, 258 | 2, 826 | 568 | |
| In collegiate and theological schools | 2, 587 | 2, 971 | 384 | |

| Normal school fund | 1, 070, 674 | 1, 098, 467 | 27, 793 | |

(From reports of Hon. William C. Whitford, State superintendent of public instruction, for the two years indicated, with return from the same for 1879–'80 and from his successor, Hon. Robert Graham, for 1880–'81.)

## STATE SCHOOL SYSTEM.

### OFFICERS.

A State superintendent of public instruction, elected by the people for two years, has general supervision of the common schools. Each county has a school superintendent, who is elected by the people for two years, and such counties as have over 15,000 population may have two if the board of supervisors shall so determine. District school affairs are managed by district boards consisting of the director, treasurer, and clerk, who are elected at district meetings and hold office for 3 years, with annual change of one. In towns which have adopted the township district system, the schools are under boards of school directors composed of the clerks of the various subdistricts. Free high schools are in charge of boards of 3 members, comprising a director, treasurer, and clerk; but, in cities not under county superintendents that become high school districts, the city board of education acts as a high school board. State normal schools are controlled by a board of regents, consisting of the governor, the State superintendent, and 9 others, who are appointed by the governor, with the approval of the senate. Women are eligible to election as district, town, or county school officers.

### OTHER FEATURES OF THE SYSTEM.

Public schools are supported from the income of a State school fund and from local taxation. The latter must, in each district, equal the amount last apportioned to it from the State fund, the basis of such apportionment being the number of resident youth 4 to 20. Each district, in order to receive its share, must sustain a common school, taught by a qualified teacher, for 5 months (in exceptional cases 3 months) each year, must have reported its school statistics according to law, and taken an annual school census. The law requires yearly reports to be made by district clerks, town clerks, county superintendents, and the State superintendent. Public schools must be nonsectarian and are free to all resident youth 4 to 20; pupils over 20 and non-residents may be admitted and instructed gratuitously or on the payment of tuition fees. Parents and guardians are required to send to public school at least 12 weeks in each school year all their children between 7 and 15 not disqualified for study, unless their education has been otherwise provided for; and a fine is imposed on those who violate the law. Exception is made, however, in case the residence of a parent or guardian be situated 2 miles from the school-house or in case the labor of a child be necessary to the support of parent, brother, or sister. Teachers, to be legally employed, must have certificates of qualification, and they must keep a daily register or forfeit pay. Teachers' certificates, granted by county superintendents on examination, are of 3 grades. State diplomas, good for 5 years or for life, are given by a board of examiners appointed by the State superintendent. The superintendent also has power to grant diplomas to graduates of the normal schools (which are good for 5 years), of the State university, and of other colleges in the State with equivalent courses, after they have taught successfully a certain length of time (which are good until annulled).

The system comprises, besides the common schools, public, high, and State normal schools, teachers' institutes, and a State university. There are also State institutions for the blind and deaf and a State reform school.

### GENERAL CONDITION.

The statistics show an increase of over 8,000 in the number of youth of school age, with only 665 more enrolled in public schools and an average attendance 6,632 less than the preceding year. Attendance in the counties was reduced by bad weather in the winter, as well as by the prevalence of contagious diseases. The superintendent thinks the decrease would have been greater but for the compulsory law. In the cities there was a gain of nearly 2,000 attending public day schools and of as many more in the evening schools. More school districts by 41 were organized and more by 27 sent reports. The apparent decrease of 141 in the number of public schools taught arises from different methods of reporting, there being in fact an increase in some counties. In 1879–'80 each department was returned as a school, but in 1880–'81 all departments in a building were regarded and reported as one school. Seven more high schools and 23 more graded schools were so reported. Fewer private schools were taught, but more pupils attended them; in the cities, children were taken from these and sent to public schools. Public school-houses increased by 87 and the value of all public school property by $219,359. Fewer teachers were employed, all the reductions but one taking place among the men. The pay of teachers was on the whole slightly increased; in the cities men are reported as receiving on an average $8.11 more and women $1.19 more a month, while in the counties men were paid $1.75 less and women 30 cents more. The superintendent reports a decrease in the number applying for certificates, and says teachers are seeking more remunerative positions in the trades and professions opened to them by the revival

in business. A larger amount of money was expended for public schools, although the reported receipts for them were less. There was an increase of $42,370 in the public school fund and of $27,793 in the normal school fund, while the university and agricultural college funds also increased somewhat.

The superintendent finds evidence of a steady and healthful advance in all grades of schools and methods of school work. He reports, also, greater harmony and zeal in the management and teaching of the schools; a more general recognition of the prominent defects in the public school system and more apparent willingness to remedy them; a slight growth of sentiment favorable to the employment of better teachers and for longer terms; a wider dissemination of information in respect to hygienic laws in their application to school-houses, grounds, and the care of children while in school, and a marked progress in methods of instruction in the country schools through the introduction therein of a graded system of study. This system consists of a classification of pupils into three grades with regular steps, promotion from one to the other being made according to fixed rules, and the arrangement of a simple but complete method of school records. Great importance is attached to the adoption of this system, and the most active labor has been given during the year to its introduction. As during the preceding year, circulars on the subject were sent to school officers and teachers; meetings of county superintendents were held to discuss the best means of instructing teachers and of enlisting the interests of school boards in the system. The course of study for teachers' institutes and the teaching given therein were based on this graded course for country schools; public addresses were made explaining it and reports of its workings were published in educational and other journals. The result has been beyond the superintendent's expectations, the system having been introduced into about one-fifth of the previously ungraded schools of the State.—(State report.)

### RECOMMENDATIONS OF THE SUPERINTENDENT.

The superintendent repeats former recommendations as to changes in the school laws with a view to securing (1) better qualification of teachers and their greater permanence; (2) the provision of text books free of charge to pupils; (3) the enforcement of attendance on teachers' institutes; (4) changes in the compulsory education law making the required 12 weeks consecutive, and providing for the appointment of officers to look after truant children, to prosecute parents and guardians for violation of the law, and prevent the unlawful employment of children. He also advises the enactment of laws defining the educational qualifications necessary for superintendents; making the appointment of two superintendents in counties having over 15,000 population compulsory instead of permissive, as now; levying an annual State tax of two mills on the dollar of taxable property for public schools, one-half of the proceeds to be apportioned on the basis of attendance; and making compulsory the introduction of the town instead of the district system of schools. He says the voluntary system has been in operation 12 years, with but little advantage, the town system being now in use in only 19 towns in 9 counties. A few others adopted it, but abandoned it, chiefly because of its unlikeness in some points to the system prevailing in a majority of the districts.

### KINDERGÄRTEN.

Ten schools of this class send reports for 1880–'81, and the State superintendent's report shows that 3 others were taught during the year. Five of them, situated in Milwaukee, enrolled 246 pupils, under 13 teachers. Two are reported in La Crosse and Oshkosh, while Madison, Sheboygan, Watertown, Beloit, Kenosha, and Neenah each report 1 such school; one of those at Oshkosh was attached to the State normal school.

A strong sentiment favorable to the introduction of this system into the public schools has been created by the efforts of intelligent people, particularly women, in a few of the larger cities, and in Milwaukee a complete and well furnished Kindergarten was established under the supervision of the board of education. The establishment in 1879–'80 of a Kindergarten department in connection with the normal school at Oshkosh resulted so favorably that in 1881 the board made similar provision for the school at Platteville. No report from this has yet appeared.

For statistics of Kindergärten, see Table V of the appendix, and for a summary of these statistics, see a corresponding table in the report of the Commissioner preceding.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

In the principal cities of the State, boards of education, assisted by city superintendents, have charge of school interests.

STATISTICS.

| Cities. | Population, census of 1880. | Children of school age. | Enrolment in public schools. | Average daily attendance. | Number of teachers. | Expenditure. |
|---|---|---|---|---|---|---|
| Appleton | 8,005 | 2,946 | 1,790 | 1,432 | 29 | $20,117 |
| Fond du Lac | 13,094 | 5,455 | 2,191 | 1,315 | 43 | 25,032 |
| Green Bay | 7,464 | 2,413 | 1,069 | 776 | 20 | 11,239 |
| Janesville | 9,018 | 3,384 | 1,701 | 1,325 | 41 | 18,112 |
| La Crosse | 14,505 | 4,531 | 2,637 | 1,635 | 44 | 34,348 |
| Madison | 10,324 | 3,480 | 1,951 | 1,756 | 36 | 22,129 |
| Milwaukee | 115,587 | 40,096 | 17,309 | 14,193 | 267 | 216,193 |
| Oshkosh | 15,748 | 6,180 | 2,287 | 2,081 | 54 | 31,825 |
| Racine | 16,031 | 6,296 | 2,388 | 1,552 | 46 | 29,962 |
| Watertown | 7,883 | 3,462 | 1,084 | 672 | 21 | 11,757 |

ADDITIONAL PARTICULARS.

All the cities given in the above table report graded courses of study covering from 8 to 12½ years. Milwaukee reports the lowest number, 8, but has beyond those 8 grades a high school with 4 years' courses, and has had normal classes beyond.

*Appleton* reports 7 public schools, taught in as many buildings, capable of seating 1,750 pupils; all but one of the buildings in good condition, all but 2 built of stone or brick, but only 1 of them properly ventilated; another school building needed; 4 private schools, with 10 teachers and 396 pupils. Semimonthly teachers' meetings were held.

*Fond du Lac* reports 19 graded and 6 ungraded public schools, one of the former a high school; 19 school buildings, capable of seating 2,800 pupils; the buildings all in good condition, but only 4 properly ventilated; the 43 school rooms well supplied with blackboards and 40 of them with dictionaries. Teachers' meetings are held semimonthly.

The *Green Bay* system comprised 1 ungraded and 4 graded schools. Of the 5 school buildings (3 of brick or stone), only 2 were in good condition and only 1 properly ventilated. Another building was needed, the existing ones being capable of seating only 1,000 pupils. Teachers' meetings were held monthly. Four private schools were taught, with 350 pupils, under 7 teachers.

In *Janesville* 6 graded schools, with 4 or more departments in each, including a high school, were taught in 6 buildings, capable of seating 1,801 pupils; all the buildings (which were of stone or brick) were in good condition and properly ventilated. The semimonthly teachers' meetings were well attended. Four private schools were taught, having 175 pupils, under 4 teachers. Many children leave school early to work in factories, and the number seems likely to increase rather than diminish.

*La Crosse* reports 13 graded and 3 ungraded day schools and 1 evening school, the latter with 80 pupils, under 2 teachers; 10 school buildings, 5 being of stone or brick, and all capable of seating 2,150 pupils; 1 house built during the year, but another needed; all but 1 of the 10 in good condition, but only 5 properly ventilated; and 4 private schools, with 600 pupils and 14 teachers. Meetings of the public school teachers were held weekly.

The *Madison* public schools were taught in 9 houses, capable of seating 3,480 pupils; all but 1 of the houses were of stone or brick, all in good condition and properly ventilated. Teachers' meetings were held weekly. There were 8 private schools, with 650 pupils attending.

*Milwaukee*, besides 26 graded public schools, had 13 free night schools, the latter with 2,030 pupils enrolled, under 59 teachers. Of the 26 school buildings all but 2 were of brick or stone, and all but 1 were reported in good condition. One was built during the year, but 6 others were required to accommodate the pupils, who were steadily increasing in number. Music, drawing, and German were among the branches taught in all the grades, and improvement is noted in the instruction given in all three. During the year there was much discussion in the board as to continuing German in the public schools, and able reports were presented on both sides, the result being a decision that it should be continued. The course of study below the high school extends over 8 years, the high adding 4 more. In this school the curriculum was reorganized during the year and 4 distinct courses were established: English-scientific, German-English, preparatory normal, and Latin-English. Greek was discontinued for the present, the number pursuing it being thought too small to justify its continuance. Efforts made by the board to secure economy in school administration led to a reduction in the pay of teachers during the first three years of service, defended on the ground of the youth and inexperience of a majority of them when appointed, although it is acknowledged that nearly all are normal school graduates and among the best in the force. By such economy the board was enabled to establish evening schools as an experiment, and the earnest-

ness with which they were attended by young men and women was surprising. The evening schools were maintained to the end of February. During the term several hundred persons were refused admission, the funds available being insufficient. There were 48 private schools, with 7,311 pupils, under 174 teachers.

*Oshkosh* reports 7 graded and 2 ungraded public schools, taught in 10 buildings, 8 of which were in good condition and properly ventilated; teachers' meetings held monthly; and 7 private schools, with 975 pupils.

*Racine* reports 7 graded and 2 ungraded public schools, 8 school buildings, all in good condition and properly ventilated; one more building required; a high school, with 93 pupils; and 8 private schools, with 954 pupils attending. Teachers' meetings were held semimonthly.

In *Watertown* the public schools comprised 5 graded (including 1 high) and 1 night school, the latter having 115 pupils enrolled. The 5 school buildings (all in good condition and well ventilated) were capable of seating 1,200 pupils. Teachers' meetings were held semimonthly. Five private schools reported 800 pupils under 15 teachers.

## TRAINING OF TEACHERS.

### STATE NORMAL SCHOOLS.

The 4 State normal schools, at Oshkosh, Platteville, River Falls, and Whitewater, report a total of 1,029 normal pupils attending during the year (381 men and 648 women) and 65 graduates, of whom 12 were from the advanced course. Certificates are given to students who complete the elementary course of 2 years, and diplomas to graduates of the advanced course, which requires 2 years more. Graduates of the full course, after teaching successfully for one school year, may have their diplomas countersigned by the State superintendent, which gives them the value of unlimited State certificates, good for life unless revoked for cause. In like manner graduates of the elementary course may receive the limited State certificate, good for 5 years. The State normal schools are sustained mainly from the income of a normal school fund and offer tuition free to such as agree to teach in the public schools of the State. They are under the control of a board of regents consisting of 9 members appointed by the governor, the latter and the State superintendent being members ex officio. The president of the board of regents reports a steady increase in the amount of professional training given in these schools. He thinks, too, that greater skill is shown by the teachers in blending the professional and academic instruction. President McGregor, of the Platteville school, notes a constantly increasing demand for graduates and undergraduates of that school to teach, and President Albee, of the Oshkosh school, makes a similar report.

The Kindergarten established at the Oshkosh school in May, 1880, fully met the expectations of its friends. The visitors say that the work done therein was admirable and think its introduction will be amply justified, even should the normal students learn nothing more from it than how to keep little ones busy and interested.

An important addition was made during the year to the Platteville building by the erection of a two-story wing, 45 by 65 feet, substantially built at a cost of $10,000.

A new State normal is to be established within a year or two at Milwaukee. That city has appropriated $50,000 for a building and donated five city lots as a site for it.

### OTHER NORMAL TRAINING.

*Milwaukee Normal School*, a department of the city school system, presenting a professional course of 1 year for the preparation of teachers for the city schools, reports 15 pupils during the year, of whom 13 were graduated.

The *National German-American Teachers' Seminary*, Milwaukee, gives free tuition in a 3 years' course of study and reports 19 normal and 12 other students during the year.

The *Catholic Normal School of the Holy Family*, St. Francis Station, reports 35 normal students, all men, and 10 graduates, all of whom engaged in teaching. There were 2 courses of study, of 3 and 5 years, respectively.

Some instruction for students expecting to teach is provided at Galesville and Lawrence Universities and at Milton College. Northwestern University, too, had a normal department in 1878, the date of the last catalogue received by this Office.

### TEACHERS' INSTITUTES.

Fifty-six institutes were held by State authority, having an enrolment of 3,757, a decrease for the year of 8 institutes and 686 enrolled. Most of them remained in session 2 weeks, only 16 having so short a term as 1 week. A large majority of the teachers attending had been trained in college, academy, normal school, or high school, only 1,079 having had no further advantages than those of the common schools. Besides the above, provided by the State, 11 private institutes were held by county and city superintendents. Seven of these lasted 1 week each; one, 2 weeks; and two, 5 to 6 weeks. The

decrease during the year in the number of institutes held by the State was owing partly to the private ones held and partly to the fact that the subjects discussed in the public institutes have been largely taken from primary school work, not specially interesting to teachers above that grade.

### EDUCATIONAL JOURNAL.

The Wisconsin Journal of Education, published monthly at Madison, under the editorship of the State superintendent and his assistant, continued to give valuable information on educational topics, as in preceding years. It is the organ of the State Teachers' Association and of the State department of education, and is one of the most useful journals of its class.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

State aid to the amount of $500 a year for the first five years is given, on certain conditions, to high schools organized under the school law. There were 117 high schools taught, 7 more than in 1879–'80; of these, 78 were aided from the fund and 39 were not. Thirteen new schools were organized under the law, and 20, whose five years had expired, were transferred to the list of those receiving no aid. If the law should remain unchanged it was said that 36 more schools would be added to the latter class in 1882. The State superintendent thinks the State aid should be continued in a majority of cases longer than 5 years, and advises a change to that effect in the law. This he thinks especially desirable in the smaller villages and more densely populated country districts, where the school taxes are already high. In both classes of schools there were enrolled 8,202 pupils, under 263 teachers. There were 3,566 pupils in these schools studying only the common school branches; 2,805 studied algebra and geometry, 3,640 the natural sciences, 1,155 modern languages, and 1,340 ancient languages. The graduates in 1881 numbered 462, of whom 159 were boys and 303 girls; the total number of graduates was 2,781 (960 boys and 1,821 girls).

### OTHER SECONDARY SCHOOLS.

The State superintendent reports statistics from 17 academies and 7 business colleges, having a total of 2,826 pupils, under 129 teachers. Of the pupils 1,198 belonged to the business colleges and 1,628 to the academies; the former sent out 24 graduates in 1880, the latter 53. For further statistics of such of these schools as report to this Office, see Tables IV, VI, and VII of the appendix; for pupils in preparatory departments of colleges, see Table IX, and for general summaries, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

Reports in some form have come for 1880–'81 (see Table IX) from the University of Wisconsin, Madison; Lawrence University, Appleton; Beloit College, Beloit; Galesville University, Galesville; Milton College, Milton; Racine College, Racine; Ripon College, Ripon, and Northwestern University, Watertown. All these institutions, except Racine and Beloit Colleges, were open to both sexes; all but the university at Madison present arrangements as before for preparatory instruction; all continued their classical courses of 4 years; and all but one (Beloit College) had scientific courses of equal length. This offered, instead of the scientific, a philosophical course of 4 years, which embraced an amount of Latin and Greek considered necessary to a liberal education, but gave special attention to science and the modern languages. German and French form a part of the course in 6 of these institutions. Ripon College provides only for German, which here, as in several of the others, forms a substitute for Greek in the scientific course. The State university adds instruction in the Scandinavian languages, as well as technical departments in science. Two have departments of music and 3 of drawing and painting; 3 prepare for teaching and 3 for business.

The State superintendent received reports from 17 institutions claiming to be collegiate. Four of these, however, are by this Office classed with academies, 2 with colleges for women, and 1 with commercial colleges. All had a total attendance of 2,687 students; 174 students were graduated, 50 were candidates for the degree of A. B., and 34 for that of B. S.

The *State University* discontinued its preparatory department, with the exception of a class in Greek, strengthened its higher courses of instruction, particularly in the departments of practical knowledge, and increased the number of elective studies. The astronomical observatory was finished and successful work done in it; Ladies' Hall was reor-

ganized and suitable grounds were acquired for a gymnasium. The report of the board of visitors shows perfect harmony of opinion in regard to the results of coeducation. They say that the health of the young women in the university as well as their scholarship compared well with that of the young men and very favorably with that of young women in general. The policy of the university in regard to discipline is also approved and its results commended, the aim being to develop character through reasonable personal freedom. There has been for the last 6 years a gradual change in the relative number of students pursuing the three leading courses, the ancient classical in 1881 numbering 60 (21 more than in 1875), the modern classical 71 (45 more), and the scientific 76 (44 less). This change is ascribed partly to an advance in the admission to the scientific course, partly to the preference of young women for the modern classical course, and partly to the fact that the feeling in favor of a scientific as opposed to a classical education seems to be somewhat abated. Special students are becoming each year a more important element; few of them belong to the class of those who are unable to take the regular work; many who lack time or means for the full course, including often graduates of normal schools, remain one, two, or more years. Some, however, who wish to lighten the examinations engage for a time in special studies and then find their way into the regular classes.

For further statistics of the colleges and universities, see Table IX of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF WOMEN.

Besides the 6 foregoing institutions, open to both sexes, there are 4 especially for young women: the Wisconsin Female College and Fox Lake Seminary, Fox Lake (Congregational); Milwaukee College, Milwaukee (non-sectarian); Santa Clara Academy, Sinsinawa Mound (Roman Catholic), and Kemper Hall, Kenosha (Protestant Episcopal). The first three named report a total of 94 students in collegiate classes (4 of them being young men), 215 in preparatory departments, and 95 in special courses. Only 1, the Milwaukee College, reports itself as authorized to confer collegiate degrees. An academy for young men was organized in connection with the Wisconsin Female College in 1875, the young men entering the collegiate department if they wish and reciting in the same classes with the young women; the boarding hall is reserved for the young women exclusively. Latin, German, music, painting, and drawing are taught in this college; that at Milwaukee adds French to the above; at Santa Clara Academy the course comprises French, German, Italian, music, crayon, oil, and water color.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

### SCIENTIFIC.

As already stated, nearly all the colleges and universities present courses of instruction in general sciences. The State University makes provision for scientific and technical instruction in a general scientific course of 4 years, a department of agriculture, one of civil and mechanical engineering, and one of mining engineering and metallurgy, each course occupying 4 years. Applicants for admission to the agricultural and general scientific courses must pass an examination in natural philosophy, physiology, botany, and a certain amount of German or Latin, as well as in English grammar and analysis. After 1882 solid geometry will also be required. Students desiring to enter the engineering or mining department must be fitted for the sophomore year in the general science course. In agriculture prominence is given to such studies as chemistry, botany, and zoölogy. A term must be spent in the machine shop learning the use of tools, and two terms are given to practical work in horticulture. The study of agriculture does not involve manual labor on the farm; where such work is undertaken by students they are paid for it. Students who may not wish to take the full course in agriculture may take a 2 years' course or they are received as special students. The regents of the university report marked progress in this department, as well as in those of civil and mechanical engineering, mining, metallurgy, and mechanics; and the committee of citizens appointed by law to visit the university express the opinion that opportunities are afforded here for the training of young men as engineers, miners, chemists, geologists, farmers, and draughtsmen which are equal to those of the best special schools.

For statistics, see Table X of the appendix, and a corresponding table in the report of the Commissioner preceding.

### PROFESSIONAL.

*Theological* instruction is given in the Seminary of St. Francis of Sales, St. Francis Station (Roman Catholic), which reports 203 students and 34 graduates; in Nashotah House, Nashotah Mission, Waukesha County (Protestant Episcopal), which had 12 students and graduated 3; in the Mission House, Franklin (Reformed Church), with 11

students; and in the Lutheran Seminary, Madison, which is sustained by the synod of the Norwegian Evangelical Lutheran Church in America. This institution reports 13 theological students, all of whom had received a degree in letters or science. In the seminary at St. Francis Station the course extends over 10 years, pupils as young as 13 being admitted. They must be able to read and write English or German and must intend to become priests. Those admitted to the Nashotah House must also be candidates for priests' orders. All received in the theological department of the Lutheran Seminary are college graduates. No examination is required for admission to the Reformed Church school at Franklin.

These 4 schools reported to the State superintendent a total of 284 pupils (of whom 176 were in regular theological classes and 108 in preparatory), 48 graduates during the year, and 590 graduates in all.

For further statistics, see Table XI of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

The *law* department of the University of Wisconsin reports 52 students for 1880–'81, of whom 9 had received a degree in letters or science, and 34 graduates. This department has recently gained importance in the work of the university. The attendance fell off slightly during the year, through changes respecting admission and graduation; but, as the school is now organized, its diploma has much greater value. Candidates for admission must pass an examination in English branches, and if under 20 they must be college graduates. In order to graduate, two whole years must be given to the study of law, one of them under the faculty of this school, and a final examination conducted by the faculty before the annual board of visitors must be passed. The law library, the largest of its kind in the Northwest, is at all times accessible to the students and receives important additions each year.

For statistics, see Table XII of the appendix, and for a summary, see a corresponding table in the report of the Commissioner preceding.

No *medical* schools are reported.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The *Wisconsin Institution for the Deaf and Dumb*, Delavan, reports 179 pupils, organized in 10 regular classes under as many teachers; also, supplemental classes in articulation, to which special attention is given. Primary, intermediate, and academic branches are taught; also, such employments as shoemaking, cabinet work, and printing. An effort was made to secure a teacher in drawing, but funds proved insufficient. The State provides board and tuition free of charge for all deaf and dumb residents of Wisconsin between the ages of 10 and 25 who are of suitable capacity.

Provision is also made for the instruction of deaf-mutes in *St. John's Catholic Deaf-Mute Institute*, St. Francis, and in the *Wisconsin Phonological Institute*, Milwaukee. St. John's had 43 pupils during the year, who were taught religious doctrine, the common school branches, printing, shoemaking, agriculture, general housework, needlework, and fancy work. The Phonological Institute reports 21 pupils, who were instructed in the common English branches, gymnastics, drawing, and needlework. The articulation method is the only one used in this school, which is in charge of a board of visitors appointed by the Wisconsin Phonological Institute, a society organized in 1879 for the purpose of propagating the method of instruction by articulation. The funds of the society are sufficient to sustain only a limited number of indigent pupils, who are admitted without charge.

### EDUCATION OF THE BLIND.

The Wisconsin Institution for the Education of the Blind, Janesville, embraces in its course of study and training the common and high school branches, music (vocal and instrumental), and such employments as carpet weaving, cane seating, sewing, knitting, crocheting, and bead work. Each pupil is expected to spend an hour every day in some industrial occupation. During the year there were 83 pupils under instruction, and since the organization of the institution in 1850 there have been 299. No charge is made for board or tuition. The age for admission is from 8 to 21, and pupils may remain as long as is necessary to finish the course of study.

### REFORMATORY AND INDUSTRIAL TRAINING.

The *Wisconsin Industrial School for Boys*, Waukesha, reports 90 boys 10 to 16 years old committed to its care during the year, with 5 returned to it, the whole number attending being 525. They were divided into two classes, which alternately work and attend the school, where they are taught the common English branches. The school is divided into 5 departments, each with 3 classes, and promotions are made from the lower to the

higher after a written examination. The employments provided are the manufacture of shoes, socks, and mittens.

The *Wisconsin Industrial School for Girls*, Milwaukee, receives girls from infancy to 16, the conditions of commitment being destitution, vagrancy, or danger of becoming depraved. All remain in school 4 hours daily, and the younger ones 6 hours. They are taught the common school branches, history, domestic economy and science, besides housework, hand and machine sewing, cutting, and many kinds of fancy work. Seventy-five per cent. of those discharged are known to have become orderly and useful members of society.

The *Good Shepherd Industrial School* (for girls), Milwaukee, under the care of the Roman Catholic Church, is partly sustained by the county. Plain and fancy sewing and knitting, washing, ironing, and all domestic employments are taught; also, reading, writing, spelling, and arithmetic.

Four orphan asylums, 3 of them in Milwaukee, admitting only girls, and 1 at La Crosse, for boys, report an aggregate of nearly 300 children. Three are supported by the Roman Catholic Church; the other, which is not denominational, by the contributions of friends. The children are instructed in reading, writing, arithmetic, and housework, and when old enough to be useful are provided with homes.

## EDUCATIONAL CONVENTIONS.

### WISCONSIN STATE TEACHERS' ASSOCIATION.

The twenty-ninth annual meeting of this association was held at Appleton July 6–8, 1881, President I. N. Stewart in the chair.

After the usual introductory exercises, Prof. F. H. King delivered a lecture on "The modern doctrine of evolution," accompanied by illustrations. On the following day an address of welcome was delivered by Mayor Humphrey Pierce, which was responded to by Ex-President W. H. Beach. President Stewart then delivered the annual address. This was referred to committees for consideration of and report on various topics embraced, such as "State certificates," "sanitation of school buildings," "normal schools and institute work," and "colleges and universities." President G. S. Albee, chairman of the committee on a course of reading for teachers, submitted a report, presenting a course for 4 years, which embraced, besides professional works, choice selections from history, fiction, belles lettres, and science. A paper on "Examinations in school, their methods and functions," prepared by Principal M. S. Frawley, was read by Superintendent Neill and discussed by President Stewart. Dr. Peet, of the Wisconsin Academy of Arts and Sciences, spoke of certain investigations concerning the Wisconsin mounds, and asked the aid of teachers in the resurvey of these mounds. Miss Etta S. Carle read a paper on "Naples and its surroundings," and Miss Mary A. Wadsworth, one on "Thackeray." After the election of officers for the ensuing year, the committee that had under consideration the subject of State certificates presented a report, adopted after some discussion, expressing a belief that the present laws on the subject give general satisfaction and recommending that no action in the matter be taken. A paper was read by Principal J. M. Rait on "Ungraded and backward pupils: what shall we do with them?" and one relating to sanitary matters connected with school work, by Dr. Chittenden, of the State board of health. E. G. Haylett read a paper on drawing, illustrating it by use of the blackboard, and Prof. N. M. Wheeler, one on "The machine in education." An abstract of a paper on "The practical in education," by President Albee, was read, and after the adoption of resolutions and some other business the association adjourned.

### MEETING OF COUNTY SUPERINTENDENTS.

The semiannual meeting of county superintendents usually held in connection with the State association took place on Thursday afternoon, July 7, the addresses and papers comprising "Examinations in theory and art of teaching," "Township system of school government," "Uses and abuses of the county superintendency," "Is a uniformity of teachers' examinations throughout the State desirable?" and "Difficulties in grading country schools." There were present 18 county and 5 city superintendents, besides State Superintendent Whitford (who presided) and his assistant, S. S. Rockwood.

### MEETING OF INSTITUTE CONDUCTORS.

The annual meeting of institute conductors was held at Appleton July 5, 1881, State Superintendent W. C. Whitford presiding. The best methods of teaching the various common school branches were presented and discussed, Prof. R. Graham presenting the subject of reading, Prof. A. J. Hutton arithmetic, Prof. J. B. Thayer writing, and Prof. A. Salisbury language. Prof. A. F. North read a paper showing how exercises in local history may be profitably given, and Mr. Chandler and others discussed the question of

examination in connection with the institutes. In the evening State Superintendent Whitford read a paper on "Future work in the gradation of country schools;" Superintendent James T. Lunn read one entitled "Lessons learned in introducing the graded system into country schools," and several other superintendents gave their experience and views on the subject. On the following day Prof. A. J. Hutton presented "Drawing;" Prof. J. B. Thayer, "Geography;" Prof. A. Salisbury, "United States history and government;" Prof. A. A. Miller, "Good behavior;" and Professor Graham, the "Theory and art of teaching."

## CHIEF STATE SCHOOL OFFICER.

Hon. WILLIAM C. WHITFORD, *State superintendent of public instruction, Madison.*

[Second term, January 5, 1880, to January 1, 1882.]

Hon. Robert Graham was chosen to be Mr. Whitford's successor at the election in November, 1881.

## ALASKA.

### GENERAL EDUCATIONAL CONDITION.

#### MISSIONARY SCHOOLS.

Nearly all the information at hand as to schools in Alaska for 1880–'81 relates to those sustained by the Presbyterian Board of Home Missions, which has schools at Sitka, Fort Wrangell, and among the Chilkat tribe of Indians, employing 11 missionary teachers in this field.

At Sitka the school attendance increased considerably during the year, the average being 230 pupils. This increase is ascribed to a compulsory attendance law proclaimed and enforced by Captain Glass, in command of the United States ship Jamestown. A much needed training school or boarding school for boys was opened at Sitka in November, 1881, and in December it numbered 25 pupils. Its beginning was made by a few boys who complained that they could not study while living at home, on account of the quarrelling and carousing there, and obtained permission to sleep in the school-house. They brought their own blankets and picked up food as they could. Others joined them, and as the number increased an old hospital building was fitted up for their use and a teacher moved into it with them.

The boarding and day school at Fort Wrangell made steady progress, from 90 to 100 pupils attending during the winter terms. A school among the Chilkats, established in 1880 and at first taught only by a native, had 60 to 80 pupils, who were learning words of 3 letters and improving rapidly, being very desirous to advance. At the Chilkat station, which has been named Haines, a substantial two story frame building was erected as a residence for the teachers, and another building purchased and refitted for the school.

Besides these schools two others were opened during the summer among two large and powerful tribes not previously provided for, the Hydah and Hoonyah.

As the superintendent of this work (Dr. Sheldon Jackson) remarks, the difficulties of providing suitable buildings for teachers and schools in a region hundreds of miles from a saw mill and 1,500 to 2,000 miles from stores of supply can be little appreciated in the older sections of the country. The lumber, hardware, glass, and carpenters for the Chilkat school at Haines were brought from San Francisco, Cal., and Portland, Oreg. The monthly mail steamer landed them, with teachers and superintendent, 100 miles from their destination, which was reached after considerable delay. Upon completion of the building here, men and materials were transported through the aid of Captain Glass, of the steamship Jamestown, to the principal village of the Hoonyah tribe, at the head of Lynn Channel, where a similar building was erected at Boyd; and a canoe voyage along the coast for about 500 miles brought them to the southern end of Prince of Wales Island, among the Hydah tribe, where a large native plank house was used, it having been found impossible to convey any lumber there.

#### OTHER SCHOOLS.

No recent information has come from the two schools of the Alaska Commercial Company on the Seal Islands, nor from the Russian schools at Unalashka and Belkovsky. These, with the missionary schools above noted, it is believed, comprise all that have been yet established in Alaska, leaving a population of fully 20,000 without any educational advantages whatever.—(Presbyterian Home Missions and report from Rev. Sheldon Jackson, superintendent.)

## ARIZONA.

### STATISTICAL SUMMARY.

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| Youth of school age (6–21) | *a*7,148 | *b*9,571 | | |
| Enrolled in public schools | 4,212 | 3,844 | | 368 |
| Average daily attendance | 2,847 | | | |
| SCHOOLS. | | | | |
| Number of public schools | | 148 | | |
| Rooms for study | 101 | | | |
| Average duration of schools in days | 109 | | | |

*a* School census taken by trustees in the spring of 1880.
*b* United States census, taken in the summer of 1880.

(From reports of Hon. Moses H. Sherman, territorial superintendent of public instruction, for the two years indicated.)

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

A territorial superintendent of public instruction is elected by the people every 2 years and is associated with the governor and treasurer in a territorial board of education. The territorial board has general charge of the school system, and determines, among other things, the text books to be used and the terms on which teachers' diplomas are to be granted. The probate judge in each county is ex officio superintendent of the county public schools. For the examination of persons proposing to teach in these, the territorial superintendent appoints 2 persons to act with the judge as a county board of examiners and grant certificates to such as are found qualified. Three school trustees are elected by the people in each school district; in case of failure to elect, they are appointed by the county superintendent, subject to the approval of the territorial superintendent.—(Laws of 1879.)

#### OTHER FEATURES OF THE SYSTEM.

The public schools are supported from a territorial tax of 15 cents on each $100, apportioned to the counties according to the youth between the ages of 6 and 21, as ascertained by a biennial census; from a county tax of 50 to 80 cents, apportioned among the several districts within the county where raised, in proportion to the number that have

attended the public schools in said districts during the three months previous; and from a district tax voted by the residents of districts, should the territorial and county funds prove insufficient to maintain the schools 3 months. The board of education on examination issues certificates of 2 grades to professional teachers of experience and ability, one for life, another for 6 years. Teachers not holding such certificates must pass an examination by the county board of examiners, who may issue certificates good for 2 years. In order to receive any portion of the public school funds, schools must be taught by teachers duly examined and legally employed, and no sectarian doctrines must be introduced; school districts must also report according to law. Children between 8 and 14, unless taught regularly at home or in private schools or exempted on account of disability, must attend school for 16 weeks each year. This compulsory law, however, has not been enforced, owing to the lack of school accommodations.

#### GENERAL CONDITION.

The territorial superintendent expresses the conviction that a deep interest was taken in education by the people of the Territory during the year, and that a flourishing condition of the public schools exists, though the meagre statistics furnished by school officers failed to present this in any fair degree. For a time, however, he thinks the best results cannot be generally reached because of sparsely settled rural districts, short school terms, and small but costly schools.

## CITY SCHOOL SYSTEM.

#### TUCSON.

Tucson expended $4,527 for teachers' salaries in 1881 and $2,519 for other school purposes. The report of the principal of the public school states that the schools have been graded during the year into 3 divisions: primary, with 4 grades; grammar, with 4; and high, with scientific and literary courses of 3 years. The attendance in the primary and grammar grades was 234; that in the high school, if any had reached that grade, was not given. The school population was estimated at 1,500, the attendance in Roman Catholic schools at 450, leaving about 800 not attending any school.

## SECONDARY INSTRUCTION.

#### PUBLIC HIGH SCHOOLS.

There are two schools of this grade known to exist, one at Prescott and one opened or prepared to open in 1881 at Tucson. A third is indicated by the United States census of 1880, probably at Phœnix, as Superintendent Sherman speaks of high school work being done there.

## SUPERIOR INSTRUCTION.

#### TERRITORIAL UNIVERSITY.

The law provides for the establishment of a university, to be under the control of a board of regents composed of the governor, the judges of the supreme court, and three resident property holders of the Territory. It is to be supported by the proceeds of the university lands granted by the United States, by individual gifts, and by territorial appropriation; but has not yet been commenced, as the funds are insufficient.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. MOSES H. SHERMAN, *territorial superintendent of public instruction, Prescott.*

[Term, January, 1881, to February, 1883.]

## DAKOTA.

STATISTICAL SUMMARY.[a]

| | 1879–'80. | 1880–'81. | Increase. | Decrease. |
|---|---|---|---|---|
| POPULATION AND ATTENDANCE. | | | | |
| Youth of school age (5–21) | 39,742 | [b]50,000 | 10,258 | |
| Enrolled in public schools | 13,718 | 25,451 | 11,733 | |
| Number of these colored or Indian | 41 | | | |
| Average daily attendance | 8,530 | | | |
| SCHOOL DISTRICTS AND SCHOOLS. | | | | |
| Organized districts reported | | 1,255 | | |
| Schools or school rooms | 508 | 1,022 | 514 | |
| Number of these graded | | 41 | | |
| Number of sittings provided | 13,223 | | | |
| School-houses for public free schools | | 799 | | |
| Valuation of public school property | $214,760 | $532,267 | $317,507 | |
| TEACHERS AND THEIR PAY. | | | | |

| Whole number of such teachers | 520 | 1,033 | 513 | |
| Average monthly pay of men | $32 31 | $33 00 | | |
| Average monthly pay of women | | 26 00 | | |
| INCOME AND EXPENDITURE. | | | | |
| Reported receipts for public schools | $255,000 | $363,000 | $108,000 | |
| Reported expenditure for them | 245,000 | 314,484 | 69,484 | |

[a] As the statistics reported to the territorial superintendent for 1879–'80 are said by him to be exceedingly imperfect, those here presented are from the United States census of 1880, except as regards receipts and expenditures, which are from a report of the governor to the Secretary of the Interior; the statistics for 1881 are from a report of the territorial superintendent for 1881.

[b] Estimated by territorial superintendent.

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

A superintendent of public instruction is appointed by the governor, with the approval of the legislative assembly, for a term of 2 years. County superintendents, who may be either men or women, are elected by the people for 2 years. District boards, comprising a director, clerk, and treasurer, are elected for 3 years, 1 going out each year. No distinction of sex is made in the qualification of voters in district meetings.

#### OTHER FEATURES OF THE SYSTEM.

Public schools are supported from a county tax of 2 mills on the dollar, a poll tax of $1 on each elector, the proceeds of fines and forfeitures, and such special district taxes as may be voted by the people, the last, however, not to exceed 1 per cent. on the taxable property for school-houses and sites, 1½ per cent. for teachers' wages, fuel, and other contingent expenses, ½ of 1 per cent. for school furniture and apparatus, and $25 annually for each district library. County funds are apportioned to each district in proportion to the number of resident children and youth therein 5 to 21, and the public schools are free to all of that age. No district is entitled to its share of the fund unless it has sustained a school 3 months during the previous year and forwarded a report of school statistics to the county superintendent. Destitute children 8 to 14 are provided with necessary books. The Bible must not be excluded from the public schools; it may be

read 10 minutes daily, but without sectarian comment, and no pupil is required to read it contrary to the wishes of parent or guardian. Teachers must make reports of school statistics each term or forfeit pay; county superintendents must report annually to the territorial superintendent on penalty of like forfeiture, and the territorial superintendent must report annually to the governor. A territorial teachers' institute, lasting from 3 to 6 days, must be held each year at some convenient point by the territorial superintendent, if so requested in writing by one or more county superintendents; and if such request be not made he is required to hold institutes in three judicial districts, to continue not less than 6 nor more than 12 days.

### GENERAL CONDITION.

The public school statistics of this Territory for 1880–'81 are very meagre, owing to the fact that several of the larger counties failed to send any report to the territorial superintendent. Among the causes suggested for this failure are defective laws and the small pay of county superintendents, who receive only $3 a day for time actually employed and 5 cents a mile for travelling expenses, nothing being allowed for stationery, &c. Then, too, the reports when received must be far from adequate, since they only embrace statistics of the common district schools (generally ungraded), the larger cities and towns being managed by boards of education under special laws and not being required to report to the county superintendent.

The legislature failed to authorize the publication of the territorial superintendent's report for 1880–'81, but a brief one was printed by him at his own expense.[1] The superintendent's pamphlet was addressed especially to school officers and was intended to aid them in a better and more uniform enforcement of the laws, besides offering suggestions as to needed amendments, the principal change recommended being the adoption of the township system. This is described, the advantages of its application to the Territory are shown, and school officers are urged to use their influence in securing its adoption by the legislature. The same topic is treated by the governor in his report for 1881 to the Secretary of the Interior. The governor advocates the enactment of a United States law, applicable to all the Territories, establishing the township system; also, making provision for the collection of statistics, the keeping of public accounts, the maintaining of one or more normal schools in each Territory, and the organization of the university already provided for.

As in former years, the statistics are very imperfect and furnish little basis for comparison. Out of 49 organized counties, from 46 of which reports were due, only 33 made any whatever, and nearly all were accompanied by letters showing that they are not full and accurate. The financial statements are particularly deficient, partly because the local officers neglect their accounts and reports, but largely because the law is very imperfect and inharmonious in respect to these matters. The superintendent thinks that less than two-thirds of the school revenues appear in this report; that a full one would have made the receipts and expenditures each over $500,000. He thinks, too, that there were at least 1,800 organized districts, 1,700 schools, and 1,300 school-houses valued at $1,000,000, with nearly 50,000 children to be provided for.

## CITY SCHOOL SYSTEMS.

### OFFICERS.

In the cities of Yankton, Fargo, Deadwood, Grand Forks, Vermillion, and Sioux Falls the schools are managed by boards of education established under the special laws chartering them.

### ADDITIONAL PARTICULARS.

The boards of education in the cities above named have large powers granted them, including power to levy taxes, borrow money, and issue bonds. The schools of Yankton have been longest in operation and have maintained a high grade of efficiency, while excellent work and good progress have also been secured in the other places named. The great error in the plan is the localization of all their experience and the entire lack of coöperation, even statistics not being furnished, except as locally published.

*Yankton* reports a slight decrease during the year, according to school censuses, in the population of the city, in the school population, and in public school enrolment, the last including 749 pupils in primary, grammar, and high grades; an average attendance of 479 pupils, under 14 teachers; and 10 public schools, taught in as many buildings, all but 2 of the latter owned by the board, having sittings for 569 pupils. The attendance fell off through fears of an epidemic and was partly absorbed by a newly established Catholic parochial school. Complaint is made of carelessness on the part of some parents as to

[1] The inadequacy of the superintendent's salary and other allowances has since been remedied.

the regular attendance of pupils. Still, with all these hindrances, better work was done by the regular attendants than during any previous year. No study out of school is required in any grades below the third grammar, and even in this and in the high school one hour a day of extra study is sufficient if the time in school be faithfully used.

## TRAINING OF TEACHERS.

### TERRITORIAL NORMAL SCHOOL.

A territorial normal school was organized October 15, 1881, at Springfield. Aid to the amount of $800 was received from the city; the annual charge for tuition is $15. Certificates are given graduates of the course (covering 3 years) which authorize holders to teach in the common schools without further examination.—(Return.)

### TEACHERS' INSTITUTES.

As already stated, the territorial superintendent is required to hold institutes, either a general one at some central point or else several in the judicial districts; but no public funds are allowed for the expenses of these meetings. Teachers are required to attend; and county superintendents may refuse to grant teachers' certificates to such as are absent without good excuse. Several institutes were held during 1880–'81 by the superintendent, among other places at Fargo, Jamestown, Elk Point, Swan Lake, Madison, Sioux Falls, Mitchell, and Marion Junction. County teachers' associations were also formed in several counties and attended by the superintendent, the sessions in some of them extending through two or three days and the work being of the character of that done at institutes. Other institutes were held in various counties by the county superintendents, and many brief but valuable meetings were held by teachers.—(Letter from superintendent.)

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOL.

No definite information for 1880–'81 has come from any public high school, except that at Yankton, although it is known that such exist in a number of the larger cities and towns of the Territory. That at Yankton reports 49 pupils and 4 graduates. The smallness of this class is explained by the fact that a year was added to the course of study, which would have left the school without any graduates in 1881 but that a few belonging to the senior year were able to complete the full course of 4 years in 3.

### OTHER SECONDARY SCHOOLS.

The provision heretofore made for advanced education in public high and graded schools is being supplemented by the establishment of academies, collegiate institutes, and colleges. Among these are the Academy of the Sacred Heart, Yankton (Roman Catholic), under the management of the Sisters of Mercy; a collegiate institute, Sioux Falls (Baptist), and the Dakota College, Spearfish, in the Black Hills, established by Congregationalists and having the equipment and aims of a high school or academy. The Academy of the Sacred Heart has buildings valued at $50,000. It has been successful from the beginning, and its patronage steadily increases. The Roman Catholic Church has also maintained schools at Bismarck, Deadwood, Holy Cross, and perhaps other places, all having a partially academic character.

For statistics of such as report, see Table VI of the appendix, and for a summary, see the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### TERRITORIAL UNIVERSITY.

The University of Dakota was by an early statute located at Vermillion; and a letter from the territorial superintendent says local enterprise was engaged in erecting buildings to cost $10,000.

### DENOMINATIONAL COLLEGES.

The Association of Congregational Churches for Southern Dakota having established a college at Yankton, the citizens gave $15,000 in money, besides grounds and other aids. A large and attractive building was in course of erection in the northern part of the city, the college having, meantime, been opened in leased apartments.

The Presbyterians of Northern Dakota and Minnesota organized a college at Casselton, Dakota, for which ample grounds were provided and a building was soon to be commenced, the numbers and wealth of its patrons promising a vigorous progress.—(Letter from territorial superintendent.)

## PROFESSIONAL INSTRUCTION.

### SCHOOLS OF SCIENCE, LAW, THEOLOGY, AND MEDICINE.

No steps appear to have been taken as yet towards the establishment of scientific or professional schools.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The Dakota School for Deaf-Mutes, Sioux Falls, opened by private enterprise in November, 1880, became a territorial institution in March, 1881. The citizens of Sioux Falls, besides contributing liberally towards the school while it was a private one, gave 10 acres of land when the Territory took charge of it, the legislature having appropriated $2,000 to erect buildings. The school is free to deaf-mutes of Dakota. Only 5 were under instruction during the first year.

Besides the above there were 2 pupils from this Territory attending the Iowa Institution for the Deaf and Dumb, Council Bluffs, at a cost to the Territory of $15 a month for each.

Provision for the blind was made at the Iowa College for the Blind, Vinton, which had 3 Dakota pupils under instruction during 1880–'81.

## CHIEF TERRITORIAL SCHOOL OFFICER.

**Hon. W. H. H. BEADLE, *territorial superintendent of public instruction, Yankton.***

**[Second term, January 1, 1881, to January 1, 1883.]**

# DISTRICT OF COLUMBIA.

a United States Census of 1880.

(From reports and returns of Superintendents J. Ormond Wilson and George F. T. Cook for the two years indicated.)

## DISTRICT SCHOOL SYSTEM.

### OFFICERS.

The chief executive officer in 1880–'81, as previously, was a superintendent of public schools for whites in Washington and Georgetown and for both races in the rural districts, with another for the public colored schools in the two cities, both appointed by the District Commissioners to serve during good behavior or the pleasure of the ruling powers. To afford aid to the trustees in the selection of qualified teachers to be employed or promoted, a board of examiners is annually formed of the 2 superintendents, with others from the supervising principals and principals of individual schools chosen by the committee on teachers. The school board annually appoints supervising principals, who act as local supervisors in their respective divisions, under the direction of the superintendent.

### OTHER FEATURES OF THE SYSTEM.

The public schools are free to all resident children 6 to 17 years of age, and by a law of 1864 those 8 to 14 are required to attend at least 12 weeks each year, unless in other

schools or excused for cause. The want of school room has rendered this law inoperative, but as school buildings are increased it may come to be enforced. The white and colored pupils continued to be taught, with equal advantages, in separate schools, each being under teachers of the race to which they belonged; the fund is distributed to the schools in proportion to the school population of each race, each race having a high and a normal school. The city schools were of 8 grades, with high school classes rising gradually beyond these; the studies of each grade, including vocal music and industrial drawing, covered a year. In the rural districts there were graded and ungraded schools, according to the local density of the population. The school board decides what text books shall be used and appoints the teachers, determining their grade from reports of the examining board. Teachers must attend all meetings and special classes organized for their improvement, and must make such daily records and present such reports as are required, in order to receive their pay. Both teachers and pupils are required to protect themselves from small pox by vaccination or otherwise.

### GENERAL CONDITION.

The school record of the District for 1880–'81 was such as no combination of city and country need be ashamed of, the public schools enrolling almost 63 per cent. of the 43,537 children of school age. Adding the 5,000 reported as in private or church schools, about 32,300 of the school population, or over 74 per cent., were under instruction. The average daily attendance in the public schools was more than 47 per cent. of the whole number of school age and almost 76 per cent. of the number enrolled. There was an increase over the previous year of 860 in enrolment and of 93 in average daily attendance; 2 new school buildings were added during the year, with 24 rooms for study, 207 sittings, and 27 teachers; while the school term was shortened by 3 days. There was but a slight variation in the average monthly pay of teachers, that of males being 97 cents more, while that of females was less by the same amount. School property increased in value $120,533; while receipts for schools, increased by $78,687, were more than covered by an increased expenditure of $88,745.

### KINDERGÄRTEN.

During the year 1880, the Georgetown Kindergarten (1878) was discontinued, but was resumed in 1881, and a new school was opened in Washington by Miss Ogla Hesselback.

The others reporting were Capitol Hill Institute and Kindergarten (1877), Iowa Circle Graded School and Kindergarten (1879), National Kindergarten (1874), Industrial Home Kindergarten School, Georgetown (1880), and Fröbel Institute and Kindergarten (1875).

For further information respecting schools of this kind, see Table V of the appendix.

## TRAINING OF TEACHERS.

### NORMAL SCHOOLS.

Normal instruction was given in the Washington Normal School for Whites (1873) and in the Miner Normal School for Colored (1877) in courses of 1 year; in the normal departments of Howard University (1867) and of Wayland Seminary (1865), in courses of 3 years each; while the Kindergarten Normal Institute (1875) reported courses of 1 or 2 years, with different diplomas. The Washington Normal School graduated a class of 20, who were immediately taken up as teachers. Miner School graduated a class of 18, and all but 1 engaged in teaching. The normal department of Howard University had 97 normal students, of whom 87 were in model classes. Wayland reported 103, of whom 39 were also in the theological department; while the Kindergarten Institute graduated a class of 9, all engaging at once in teaching.

### TEACHERS' INSTITUTES.

There is no change in respect to these since 1880. The law for semiannual institutes still existing, the practice is to hold more frequent meetings, called teachers' associations, for discussion of school questions.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS.

The Washington high school for whites, having been retarded in its progress from its beginning by lack of suitable accommodations, closed the year 1880–'81 with the prospect of a new and commodious building in which to do its work in the future. In its 3 courses—academic and scientific of 3 years each and business course of 2 years—there was in 1880–'81 no change of studies from those of 1879–'80. In the boys' department there were 104 enrolled and 84 in average daily attendance and in that for

girls 130 enrolled and 100 in average daily attendance, giving an aggregate of 234 enrolled and of 184 ordinarily present, a gain of 55 in enrolment and of 34 in attendance over the previous year. For the first time in the history of this school, there was, in June, a ceremony of graduation, when certificates were conferred on 23 males and 33 females.

The high school for colored continued its 3 years' course of studies, including algebra, language, history, geometry, chemistry, astronomy, and mental philosophy. During 1880–'81 the school enrolled 75, retained 60 in average daily attendance, and graduated 12. The average per cent. in scholarship for the first year was 59.4; for the second year, 78.6; for the third year, 70.5; for entire course, 66.5 per cent., a falling off of .5 from last year.—(From information furnished by superintendents.)

#### OTHER SECONDARY SCHOOLS.

For information respecting business colleges, private academic schools, preparatory schools, or preparatory departments of colleges, see Tables IV, VI, VII, and IX of the appendix. For summaries of their statistics, see corresponding tables in the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

#### COLLEGES FOR YOUNG MEN OR FOR BOTH SEXES.

*Georgetown College* (Roman Catholic), founded as a college in 1789, chartered as a university in 1815, reported in 1880–'81 its usual course of studies. After 2 rudimentary years come 2 preparatory and 4 classical collegiate, with a post graduate course, while there is a scientific course of comparatively low grade, covering 3 years, for which there is a brief English preparatory course. In the preparatory department were 147 students, with 3 instructors; in the classical and scientific, 80, under 19 instructors, with 11 graduate students. The college library contained 30,000 volumes, and the college property was valued at $325,000.—(Catalogue and return.)

*Gonzaga College* (Roman Catholic), Washington, reopened in 1848 and incorporated as a university in 1858, continued, in 1880–'81, to offer its college course, including Greek and Latin, with a non-classical course embracing the English language and literature, mathematics, and natural sciences; but no students appear to have then passed beyond a fair grade of preparatory studies.—(Catalogue.)

*Howard University* (non-sectarian) continued in 1880–'81 its preparatory and normal courses of 3 years each, classical of 4, and a literary course of 5 years, which last embraces the studies of the preparatory and college courses, except the Greek of the former and the Latin and Greek of the latter. Counting those pursuing this course, there were 35 students, 16 of whom were classical and 19 preparatory. There was a library of 7,000 volumes; property valued at $250,000; a productive fund of $20,000, affording for the year an income of $1,957; a congressional appropriation of $10,000, and a donation of $25,000 from Mrs. Valeria G. Stone, of Massachusetts.—(Catalogue and return.)

The *National Deaf-Mute College* became a department of the Columbia Institution for the Deaf and Dumb in 1864, with a preparatory course of 1 year and a collegiate one of 4, conferring degrees of B. A., M. A., B. S., B. L., and PH. B. on completion of the required courses. In this department there were 68 students, and in the preparatory 46, with 10 instructors for both. Since its foundation 234 had received instruction, of whom 32 were teaching.—(Catalogue, report, and return.)

*Columbian University* (1821) divides the studies of the college into 7 schools: English, Greek, Latin, and mathematics, of 4 years each; modern languages and natural science, of 3 years each; and a school of philosophy of 2 years. During 1880–'81 there were 80 preparatory students, with 2 instructors, and 39 in the college department, with 10 instructors. The degrees of A. M. and A. B. were conferred on 2 graduates. There was a library of 7,000 volumes; college property was valued at $300,000; and there was a productive fund of $100,000.—(Report and return.)

#### INSTITUTIONS FOR THE SUPERIOR INSTRUCTION OF YOUNG WOMEN.

With the exception of Howard University, which gives equal privileges to both sexes, there are no public institutions of collegiate rank exclusively for women in the District.

## SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

#### SCIENTIFIC.

*Georgetown University* and *Columbian University* reported, as heretofore, scientific courses of 3 years each; the *National Deaf-Mute College*, one of 3 years. The polytechnic department of the National University, mentioned in the report of 1879–'80 as about to be established, had not in 1880–'81 been organized, and did not seem likely to be for some time to come.—(Catalogues.)

### PROFESSIONAL.

*Theological.*—The theological department of Howard University (non-sectarian) continued in 1880–'81 its examination of uncertificated applicants for admission to its 3 years' course, in which it had, under 4 instructors, 39 students, of whom 6 were graduated. Its students have access to the university library. Wayland Seminary (Baptist) reported also 39 students under 1 instructor, without note of graduations. It had a library of 1,900 volumes.—(Returns.)

*Legal.*—The law departments of Columbian University, Georgetown University, Howard University, and National University had, in 1880–'81, their previous courses of 2 years each, followed by a 1 year's post graduate course, the supreme court of the District of Columbia requiring 3 years of study for admission to the bar. Georgetown reported 38 students, including 7 post graduates; Howard, 13, conferring the degree of LL. B. on its 5 graduates; Columbian, 155; while the National graduated 30.—(Catalogues and announcements.)

*Medical.*—The National Medical College of the Columbian University, the medical department of Howard University, and the medical department of the University of Georgetown all continued their 3 years' graded courses, the last named extending its year to 8 months, the others retaining their 5 months' courses, Howard alone requiring a preliminary examination in English. Columbian, from a class of 44, graduated 5, Georgetown the same number from a class of 41, and Howard, having 81 students, graduated 12.—(Catalogues and return.)

The *National College of Pharmacy* continued in 1880–'81 to require for graduation and degree an age not less than 21 years, 4 years' experience in the practice of pharmacy, 2 full courses of lectures of 5 months each, and a 10 weeks' course in practical and analytical chemistry. The last course, as also that of analytical chemistry, must be taken in this college. Upon those who pass a satisfactory examination and are recommended by the board of examiners and faculty, the degree of doctor of pharmacy is conferred.—(Circular.)

For statistics of the legal, medical, and pharmaceutical schools, see Tables XII and XIII of the appendix.

## SPECIAL INSTRUCTION.

### EDUCATION OF THE DEAF AND DUMB.

The Columbia Institution for the Deaf and Dumb, on Kendall Green, near Washington (1857), including the collegiate department (called the National Deaf-Mute College), reported 114 students for 1880–'81, of whom 103 were males and 11 females. Of these 68 were in the college and 46 in the primary department. No change is noted, except that the lower preparatory class of the college was removed to the primary department and made the advanced class of that department, leaving only the advanced preparatory below the freshmen, now called the introductory class. No mention is made of the results of teaching articulation, reported in 1879–'80 as being very encouraging, or of graduations.—(Twenty-fourth report.)

### EDUCATION OF THE BLIND.

There being no institution for the blind in the District, the Government, up to 1880–'81, continued to make provision for them in the Maryland Institution for the Blind. During the year the United States beneficiaries from the District numbered 17, 9 males and 8 females, most of them said to be bright and promising scholars. Their studies reached as high as algebra, geometry, history, and rhetoric, with vocal and instrumental music, the institution having 10 pianos and a grand organ with water motor. The industries were piano-tuning, broom and mattress making, chair caning, plain and fancy sewing, knitting, and use of sewing machine.—(Twenty-fourth report.)

### REFORMATORY AND INDUSTRIAL TRAINING.

The *Reform School of the District of Columbia* (1869) up to July 1, 1881, had received 713 boys; during the year it had 219 under training, 60 of them committed in 1881 and 67 discharged on good behavior, while 14 left without consent. Of the 60 committed, 75 per cent. were 12 to 15 years of age, 7 were orphans, 11 fatherless, 12 motherless, while only 30 had both parents living. Neither accident nor death had occurred during the year; progress in studies was very satisfactory, as were also results of the industries on the farm and in the garden and shops, in which last the boys were trained in shoemaking, tailoring, and chair caning. Many improvements around the buildings were completed, and additional land, purchased with money from the estate of Jay Cooke & Co., was put under cultivation.—(Report.)

The *Industrial Home School*, Georgetown (1864), supplies a much needed charity. It is neither an orphan asylum nor a reformatory school. It is a child saving institution,

receiving children of either sex who are left in such a condition as to endanger their future welfare, such as orphans and children of dissolute and destitute parents. While providing a Christian home for such, it aims to give a moderate amount of education for head and hand. For 1880–'81 it reported 109 inmates. The school department is organized and furnished with teachers by the District board of trustees of public schools. For the children below the school age there is a Kindergarten. The industries are work on grounds around the buildings, in the garden and greenhouse, in carpentry, shoemaking, general housework, and sewing. During the year a greenhouse was completed and put in operation, the grounds were graded and ornamented, swimming and fish ponds excavated, and foundations laid for a cottage. Congress appropriated toward its support $10,000.—(Report.)

CHILDREN'S HOMES AND ORPHAN ASYLUMS.

*St. Joseph's Male Orphan Asylum* (1855) reported 110 inmates for 1880–'81; *St. Vincent's Female Orphan Asylum*, 115; while the *Branch St. Vincent Female Orphan and Industrial Asylum* had 40. The 2 former give elementary instruction in school studies and household industries. The pupils of the last are admitted at 13 to 20 years of age and are retained from 4 to 6 years, according to their capacity for instruction; are given a fair English education, with German and French, and trained in housekeeping, laundry work, and common and ornamental sewing. When thus prepared to teach or to do useful work in families they are furnished with suitable homes. The institution is self sustaining by the sale of the useful and ornamental work of the pupils.—(Special report.)

*Washington City Orphan Asylum* throughout its history of 67 years has been managed by the ladies of the city, and is entirely dependent on the charities of the public. It reported, for 1880–'81, 160 inmates, mostly small boys and girls, taken from the destitution and poverty of the city, of whom 5 were adopted, 9 indentured, 36 reclaimed by parents and friends, while 2 were sent to the reform school. For school instruction there are juvenile and senior departments. Dr. J. C. Hall, one of the trustees of the institution, left a bequest from which a memorial hall was nearly completed at the close of the year.—(Report.)

The *German Protestant Orphan Asylum*, Uniontown (1879), in its second annual statement, October, 1881, reported $3,453 received for its work and $3,360 expended. It had 41 inmates, 21 boys and 20 girls, of whom 6 were whole and 35 half orphans. Children are admitted at from 3 to 11 years of age and trained in elementary studies; the boys are also taught garden work and the girls housework and sewing. At suitable ages they are placed in homes under the care of officers of the institution till of age. The association received during the year, through congressional aid, a deed in fee simple for the whole property.

The *National Association for the Relief of Destitute Colored Women and Children* was incorporated by an act of Congress in 1863 to provide for such a suitable home, board, clothing, and instruction, and to bring them under Christian influence. Duly appointed officers are to enforce discipline, impart instruction in useful knowledge and in some regular course of labor, and establish rules for the preservation of health as well as for physical, intellectual, and moral improvement, and to bind out by indenture such children as may be deemed capable of learning a trade. During 1881 there were 135 inmates, of whom 7 were old women and 128 children. The school of the home was made a part of the public school system of the District in February, 1880, since which time it is reported to have made marked progress, the standard during the year being raised to comprise 3 grades. All the children of 6 years of age and upward were enrolled in the school, averaging 65.8 per cent. of the inmates. In the industrial department there were made by the children 1,891 articles of bedding, clothing, and all else used in the institution, except hats and shoes, besides 102 pairs of stockings knit by the children and aged women. Only in exceptional cases are children admitted under 3 years of age, and none retained beyond the age of 11 or 12, or until suitable homes are found for them. An appropriation of $6,535 from Congress is acknowledged for 1881.—(Nineteenth report.)

TRAINING OF NURSES.

The Washington Training School for Nurses (1877) reported, for 1880–'81, 7 instructors, 24 pupils (making 40 since opening), and 3 graduates, all of whom continued in the profession. The full course of studies covers 2 years of 42 weeks each. The only income was from membership dues. The demand for trained nurses was increasing, and graduates are certain of constant and remunerative employment. For admission, candidates must be not less than 20 years of age and must furnish evidence of good moral character and sound health. The second year must be passed in nursing in hospitals and private families, under the direction of teachers, at the close of which time those who have fully met all the requirements and have passed a satisfactory examination receive a diploma.—(Return and fourth announcement.)

### TRAINING IN ART AND MUSIC.

The *School of the Washington Art Club*, under Mr. Edmund Clarence Messer, proceeds upon the idea of individual instruction in drawing with pencil, coal, or crayon by professional methods. No classes are formed, but each student is trained to examine objects for himself and to represent them as he sees them. There is, consequently, no drawing from the flat, but only from models, from nature, and from life, instruction in perspective being given throughout. The school is yet in its infancy, but hopes to enter, before long, into better quarters, with greater facilities for useful and effective work.—(Personal information.)

In the *Art School* of Mrs. S. E. Fuller (who gives lessons in the public schools on the Walter Smith system) the plan of instruction is essentially the same as that of Mr. Messer, above mentioned, individual instruction being given to each student and each being trained to study nature and the works of those who best interpret her. A collection of casts and models enables students to study object drawing. Life classes are taught on two days of the week. A class of 47 students appears in the catalogue for 1880–'81.—(Twelfth catalogue.)

The *Rouzee Art School* of Mr. W. M. Rouzee employs the method known as the block system, which, after a pupil has become familiar with the rudiments of plain perspective, consists in drawing the outline of objects, or groups of objects, and the shadows belonging to them by straight lines and angles showing height and breadth at different points. The eye is thus trained to the true character of curves and angles. Pupils in 1881, under 2 instructors, 132; largest average monthly attendance, 105.—(Letter and circular.)

Mrs. Imogene R. Morrell, of the National Academy of Fine Arts, instructs throughout the year persons of all ages in the principles of art according to the methods of the European schools in which she has studied.

*Washington Conservatory of Music* (1868), under the direction of Mr. O. B. Bullard, with 12 instructors, embraces teaching on the piano, organ, violin, flute, guitar, and orchestral instruments, musical notation, cultivation of the voice (including elocution and vocal technique), thorough bass, harmony, counterpoint, composition, and the art of teaching. Pupils are classed in first, medium, and advanced grades of a year each, although instruction is given mainly on the idea of individual peculiarities of taste and capacity.—(Circular.)

The *School of Music* (1877), Theo. Ingalls King, principal, offers to pupils the services of teachers in such branches as the student may elect, including nearly the same as that above mentioned. The methods of instruction are by private lessons or in small classes, each pupil having the advantage of individual attention. A catalogue for 1880–'81 shows 84 pupils for that year.—(Circular and catalogue.)

## EDUCATIONAL CONVENTIONS.

### TEACHERS' ASSOCIATIONS.

A voluntary association of the graduates of the Normal School for whites meets once a month to compare experiences in government and teaching.

## CHIEF DISTRICT SCHOOL OFFICERS.

Hon. J. ORMOND WILSON is superintendent of public schools for whites in Washington and Georgetown and of the schools for both races in the rural districts.

Hon. GEORGE F. T. COOK is superintendent of the public schools for colored pupils in Washington and Georgetown.

## IDAHO.

### STATISTICAL SUMMARY.

a United States Census of 1880.
b The statistics of schools and school-houses in 1880–'81 are imperfect, two counties failing to report, while others report only partially.

(From returns of Hon. James L. Onderdonk, territorial superintendent of public instruction, for the two years indicated.)

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

These are, for the Territory, a controller, who is ex officio territorial superintendent of public instruction; for each county, an auditor, who acts as county school superintendent (except in 2 counties, where the probate judge acts), and a county school examiner, appointed by the board of county commissioners, who, with the county superintendent, constitutes a county board of school examiners; for each district, 3 trustees, elected annually by the voters of the district.

#### OTHER FEATURES OF THE SYSTEM.

The schools are sustained by the interest of an irreducible and indivisible school fund, by county taxes of not less than two and not more than eight mills on each $1 of taxable property, by the amounts received from fines and forfeitures for breaches of the penal laws, and by a sum derived from teachers' examination fees of $3 from every successful applicant before receiving a certificate. A rate bill, not exceeding $25 for repairs to school property, may be levied on parents and guardians of children attending school, but the children are not to be denied school privileges if their parents and guardians are unable to pay such tax. For a district to receive its amount of school funds, at least 10 children must have been reported by the census marshal and the schools must have taught no political, sectarian, or denominational doctrines, nor have had such papers, tracts, or documents distributed therein. The basis of distribution of the territorial school fund is according to the number of children between 5 and 21 years of age in each county; but as each county constitutes at least one school district, irrespective

of the number of children of school age therein, one-half is to be divided equally among the several districts of the Territory complying with the law; the other half, in proportion to the number of children of school age enumerated in the county, except in 2 counties, which have a different arrangement. New districts receive their per capita proportion out of the school funds of the old districts from which they are formed; but, failing to keep the schools open three months and to report them according to law during the first year, the money must be refunded. Teachers considered competent to hold positions after examination by the board of examiners receive certificates good for two years showing the branches they are authorized to teach.—(School law, 1879.)

### GENERAL CONDITION.

The superintendent of public instruction, in making his report for the year 1881, states that a degree of substantial progress has been reached, notwithstanding the poor system of supervision and lack of funds. The statistics are so meagre for both 1880 and 1881 that it is difficult to make a fair comparison, although there has been an increase at some points. Graded schools have been established at Boisé City and at Lewiston, the building in Lewiston costing $10,000. Out of 129 districts giving information as to the condition of school buildings, 84 reported them in good condition, 34 in bad condition, 12 as improperly heated and ventilated, 2 as having insufficient grounds, and 1 as not properly drained.

## ADVANCED INSTRUCTION.

### NORMAL AND SECONDARY SCHOOLS, COLLEGES, &C.

There are no schools for normal, secondary, or superior instruction reporting from this Territory.

## CHIEF TERRITORIAL SCHOOL OFFICER.

**Hon. JAMES L. ONDERDONK, *territorial superintendent of public instruction, Boisé City, Idaho.***

**[Second term, February 21, 1881, to February 21, 1883.]**

# INDIAN TERRITORY.

| Whole expenditure for education of Indians | $509, 760 | $548, 824 | $39, 064 | ---------- |

*a* As a matter of convenience, all education of Indians is, as far as possible, included under this head, except what has been given as to missionary educational work under Alaska, p. 278.
*b* No report from Chickasaws or Seminoles.
*c* Only the Chickasaws report this for 1879–'80, giving 1,845.
*d* All reporting except the Creeks.

(From reports of Hon. H. Price, Commissioner of Indian Affairs, for the two years indicated.)

## SCHOOL SYSTEMS AMONG THE INDIANS.

### OFFICERS.

As far as can be ascertained, the educational officers of the civilized tribes in the Indian Territory continued in 1881 to be as last reported, viz, among the Cherokees, a board of education of 3 members, nominated by the principal chief and confirmed by the tribal senate for terms of 3 years, one to be changed each year, with a board of 3 directors for each primary school, appointed by the board of education, to hold during good behavior; among the Choctaws, Chickasaws, Creeks, and Seminoles, superintendents of public schools, for general oversight, with trustees for local supervision of the schools of the districts into which the territory of each tribe is divided.

The United States Government, through its Commissioner of Indian Affairs, largely intrusts educational work for other Indians within the Indian Territory and elsewhere

(except in Alaska) to the several religious associations authorized by it to labor for the civilization of the different tribes. At Hampton, Va.; Carlisle, Pa.; Forest Grove, Oreg., and some other places, the principals of special schools, also authorized by the Government, continued, in 1881, to have supervision of the training of many Indian youth of both sexes, sent to them by the chiefs and head men of numerous tribes for education in ordinary studies and in useful industries.

### OTHER FEATURES OF THE SYSTEMS.

The Cherokee board of education, above mentioned, makes rules for the government of the schools of all kinds belonging to the nation, while each of the local trustees, who together compose the board, has supervision of the schools in the district to which he belongs. The members of the board examine all persons desiring to teach, and grant certificates to approved teachers according to qualification. Each is required also to ascertain the number of youth of school age (7–21) in his district and in the subdistricts of which it is composed, and such children are put under his control, to be sent to their proper schools at the expense of the Cherokee Nation till their 3 years of primary education are completed. Then such as desire the fuller 4 years' training of the higher schools may be sent to these at the expense of parents or guardians for board only, tuition still being free. They may also afterwards be sent to schools in the States. Substantially the same arrangements as to primary and higher training appear to prevail in the other 4 civilized tribes, under the direction of their superintendents and trustees.

Among the uncivilized Indians there is no uniform system as to studies or methods, each missionary or missionary association doing what seems best; but there is evidently an increasing disposition to gather the children into boarding schools, where they can be more easily protected against the degradation of barbarous rites and habits, more regularly taught, kept under better discipline, and trained in "white men's ways" and industries.

### GENERAL CONDITION.

As may be seen from the table of statistics, the schools of the Five Nations of civilized Indians enrolled 6,183 out of a reported school population of only 9,315, while, of those enrolled, 4 of the nations report 3,496 in average attendance, the Creeks making no return on this point. Of the comparatively uncivilized tribal Indians throughout the country, 8,109 out of 38,923 of school age were in the schools held for them, 4,976 of the enrolled being in average attendance. These figures indicate a considerable advance in educational interest among the civilized, especially as two of their chief school buildings were burned in 1880–'81, while they were greatly troubled during the year by the incursions of lawless whites into their territory. The advance among the wilder tribes was also great, both the increased enrolment and increased average attendance indicating this, although they too were in many cases troubled by encroachments of the whites. The day schools among uncivilized Indians fell off 3; but the better and more influential boarding schools were 8 more in number. Among the additional schools opened were 2 for the mission Indians of California, who, from their peacefulness, their poverty, and their industrious ways, appear to have fairly merited an increase of advantages for education. Six of the 8 new boarding schools for Indians in Utah, Arizona, and New Mexico were meant to accommodate 351 pupils, and are said to have been the first ever provided for the 27,000 Indians of those regions, who represent a school population of not less than 5,000. The remaining 2 new ones were established at Cheyenne River agency, Dakota, and among the Omahas of Nebraska. In all, 3 new school buildings for Indian use were completed, furnished, and occupied during 1880–'81, 8 more were made ready for occupation, and 5 others were in progress.

### COMBINED EDUCATIONAL AND INDUSTRIAL TRAINING.

To fully civilize the Indians, it has become clearly apparent that instruction in the arts of life must be connected with training in school studies. This connection has for several years been more and more attempted at several of the best Indian agencies and has been fostered by the authority of the Indian Office, especially at the schools for Indian youth assisted or sustained by it at Carlisle, Pa., Forest Grove, Oreg., and Hampton, Va. The pupils for these schools, as well as those for some less conspicuous ones elsewhere, have been chosen from different tribes (for their intelligence, character, and strength) to acquire a knowledge of such studies, arts, and habits as may enable them to aid in the civilization of their people. They are trained in the English language, in the ordinary school studies, in submission to discipline, in the orderly habits of civilized domestic life, and in the common mechanical and domestic industries. These, for the boys, include farm and garden work, carpentry, tailoring, the making of tin ware, blacksmithing, shoe, harness, and wagon making; for the girls, sewing, cookery, care of rooms and beds, nursing, and whatever will conduce to domestic comfort. The reports of

progress made show that time only is required to solve the domestic part of the Indian problem by a continuation of this system; for intelligent agents, appointed by the Government, declare, after full inspection, that for the time during which these youth have been under instruction the advance observed in school studies, in industries, in habits, and in manners has been wonderful, and would be regarded as unusual in children taken from American homes for like training.

The number subjected to this training for the year was, at Carlisle, 295; at Hampton, 81; at Forest Grove, 76.

### NORMAL AND SECONDARY TRAINING.

Education for teaching and for business is given to some extent not only in the schools above described, but also in the Santee Normal Training School, Santee Agency, Nebr., in St. Paul's Boarding School, Yankton Reserve, Nebr., and in the higher schools of the Five Nations, all for Indian youth. No training beyond this had been instituted for them in 1881.

## OBITUARY RECORD.

### COL. PETER P. PITCHLYNN.

This famous Choctaw half-breed, who died in Washington, D. C., January 17, 1881, had been during a long life one of the chief agents in the civilization and education of his tribe. The child of a Choctaw mother and a white who had served as an interpreter between the whites and Indians under a commission from General Washington, of fine physique and gifted with clear intelligence, he attracted in his prime the attention of Charles Dickens as one of nature's noblemen. He was born in the Indian town of Hooshookwa, Miss., January 30, 1806, when the Chickasaws and Choctaws owned a large part of that State. Resolving early to obtain an education, he went to a school in Tennessee, 200 miles away, carrying on his studies subsequently at the Columbia Academy, in the same State, and graduating finally at the University of Nashville. Returning thus educated to his people he exerted with great success his now developed powers in the repression of polygamy and intemperance. As a member of the national council of the Choctaws, to which he was soon elected, he made the first move for the establishment of schools, and set the example, which has been since followed at Carlisle and Hampton, of placing the first school among the whites, that other civilizing influences might operate with educational ones for the elevation and improvement of the youth brought under instruction. In 1828 he was made the leader of the expedition organized under Government auspices for the removal of the five tribes to the present Indian Territory, and by his tact and skill succeeded in making an agreement for this removal with the hostile Osages, who then held that region. Thenceforth he was till his death the trusted representative of the Choctaws in all their business transactions with the General Government, except during the war of the rebellion, when he took decidedly the Union side and commanded a Union Indian militia regiment, while many of the Choctaws were drawn into the confederate ranks from the force of early southern associations. On the return of peace he renewed his efforts on behalf of education, assisted to the utmost every movement in that direction, and is said to have been, more than any other one man, the parent of the Choctaw school system of neighborhood common schools and central higher schools, the funds for which he also did much to preserve.

## CHIEF SCHOOL OFFICERS.

These at the last advices, covering apparently the period from 1881 to 1882, were reported to be as follows:

### FOR THE FIVE NATIONS.

Hon. O. H. P. BREWER, *president of the board of education of the Cherokees, Tahlequah, Ind. Ter.*
Hon. WILLIAM L. BYRD,[1] *school superintendent of the Chickasaws, Stonewall, Ind. Ter.*
Rev. ALLEN WRIGHT,[2] *school superintendent of the Choctaws, Boggy Depot, Ind. Ter.*
Rev. JOHN MCINTOSH, *school superintendent of the Creeks, Eufaula, Ind. Ter.*
Hon. THOMAS CLOUD, *school superintendent of the Seminoles, Wewoka, Ind. Ter.*

### FOR OTHER INDIAN SCHOOL WORK.

Gen. S. C. ARMSTRONG, Hampton Normal School, Hampton, Va.
Capt. R. H. PRATT, Training School for Indian Youth, Carlisle, Pa.
Lieut. M. C. WILKINSON, Training School for Indian Youth, Forest Grove, Oreg.

[1] Mr. Benjamin Birney, of Tishomingo, is understood to have been chosen to succeed Mr. Byrd.
[2] Mr. Edmund McCurtain, of Red Oak, is understood to have been chosen to succeed Mr. Wright.

## MONTANA.

*a* Basis for distribution of school funds; age for admission to school, 5 to 21.

(From return of Hon. W. Egbert Smith, territorial superintendent of public instruction, for the first of the two years indicated, and from report for both years, with return for the latter, of Hon. Robert H. Howey, Mr. Smith's successor.)

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

A territorial superintendent of public instruction, appointed by the governor and confirmed by the legislative council for a term of 2 years, has general charge of public school affairs. Local officers are county superintendents, elected by the people for 2 years; district boards of 3 trustees, elected for 3 years, 1 going out each year; and a district clerk for each district, elected annually.

#### OTHER FEATURES OF THE SYSTEM.

Public schools are sustained from a county tax of not less than 3 nor more than 5 mills on the dollar; district taxes, voted by the people; and fines, penalties, and proceeds of the sale of town lots in the hands of probate judges. All moneys derived from the sale of any school lands which may be granted by Congress are to constitute an irreducible school fund, the interest of which is to be used for public school purposes. A school

census must be taken annually by district clerks, and the funds apportioned to districts according to the number of youth 4 to 21 resident therein. The age for free admission to school is 5 to 21, but trustees may receive adults and non-residents when there are good reasons for so doing. No apportionment can be made to districts which have not maintained a free public school for at least 3 months during the preceding school year, nor unless the teachers employed hold legal certificates in full force, nor if sectarian or partisan books have been used or political or denominational doctrines taught in the school. The elementary English branches are prescribed studies, and others may be added as deemed expedient by trustees, who may also open high schools. Instruction must be given during the entire course in manners, morals, and laws of health. Due attention must be given to the ventilation and temperature of school rooms, and healthful physical exercises are to be provided for pupils. Teachers must report annually to the county superintendent and to the district clerk or forfeit pay for the last month employed. Trustees report to county superintendents and the latter must report annually to the territorial superintendent or forfeit $100 of their pay. County superintendents may, when they think best, hold institutes for teachers in all counties having 10 or more organized school districts.

#### GENERAL CONDITION.

The statistics show considerable increase in the school population during the year, and smaller advances in public school enrolment and average attendance. More school districts were organized, school-houses built, and schools taught, the average term being 14 days longer. While only 30 more teachers' certificates were issued than during the previous year, there were 50 more of first grade. Fewer men and more women were employed, the monthly pay of men being increased by $8.24 and that of women by $1.06.

The territorial superintendent, from personal observation, as well as from county reports, records a year of healthy growth of the public schools. The people contributed liberally to their support, raising over $15,000 more by taxation than the previous year, besides increasing the value of school property by more than $21,000. The average rate of taxation, 3.8 mills on the dollar, was nearly a mill above the minimum requirement, and 2 counties levied 5 mills, the full amount allowed by law. The low percentage of enrolment on census scholars is not owing to inefficiency of the schools, but rather to the sparseness of population and consequent distance of many pupils from school. One district in Meagher County contains about 4,000 square miles of territory and another in Gallatin County is 3 miles wide and 100 miles long. In the latter, the school-house stands near the centre; the patrons have built winter homes near by, and move there for the season in order to send their children to school. While much may be done, as in this instance, by determined effort on the part of parents, the difficulty cannot be entirely overcome until the population becomes more numerous. The policy of dividing districts and multiplying schools, to which there is a tendency in some localities, brings no adequate relief, since it necessarily results in small schools and short terms. Other obstacles noted by the superintendent may be more easily overcome, such as a failure on the part of some parents to appreciate the benefits of education sufficiently to send their children to school. To compel the attendance of such by law, he thinks, may at no distant day be considered both economical and humane. Too many studies, and hence too many classes for one teacher, short school terms, and a great variety of text books have hindered progress, particularly in the ungraded schools. The last named evil was remedied by the adoption by the legislature in February, 1881, of a uniform series of text books; for the first the superintendent recommends the arrangement of a course of study for ungraded schools similar to those which have been successfully used in other places.

## CITY SCHOOLS.

#### PROGRESS DURING THE YEAR.

The territorial superintendent reports great improvement in the schools of the principal cities. A better classification of pupils was made during the year and more thorough work was done, particulary in the schools of Helena, Butte, Bozeman, Deer Lodge, and Virginia City, where courses of study have been adopted, including primary, intermediate, and high school departments. The school buildings are handsome and well arranged, and are supplied with improved styles of furniture, libraries, apparatus, and musical instruments. In Helena, the largest of the above (with 3,624 population), there were 562 pupils enrolled and 316 in average attendance, under 11 teachers.

## TRAINING OF TEACHERS.

#### INSTITUTES.

A successful institute was held at Butte during the month of March for the teachers of Deer Lodge and Silver Bow Counties, and another at Virginia City in August for the

teachers of Madison County. It was expected that others would be held during the year, but no positive information regarding them has been received and no statistics of attendance at those which were held are given. The territorial superintendent says the importance of these meetings cannot be called in question; that they stimulate and encourage teachers and prepare them to do better work. He thinks, however, that the law which makes it the duty of teachers to attend county institutes and take part in the exercises would be more effective if some penalty were attached to its violation.

#### NORMAL COURSES.

A department for the training of teachers was, at last accounts, connected with the high school at Helena, but no information has been received from it for 1880–'81.

## SECONDARY INSTRUCTION.

#### PUBLIC HIGH SCHOOLS.

As already stated, high school departments are connected with the graded system in Helena, Butte, Bozeman, Deer Lodge, and Virginia City, and possibly there may be some in other places. In those of the cities named particularly good work was done during the year. The course of study comprised the higher mathematics, natural science, and the languages.

#### OTHER SECONDARY SCHOOLS.

For statistics of private academies or seminaries reporting, see Table VI of the appendix, and for a summary, see the report of the Commissioner preceding.

## SUPERIOR AND PROFESSIONAL INSTRUCTION.

#### TERRITORIAL UNIVERSITY.

The superintendent believes the time is near at hand for the establishment of a territorial university. In 1881 Congress passed an act granting 72 sections of the unappropriated lands of Montana for university purposes; but owing to conditions attached to its sale the benefits of this grant cannot be realized in time to meet the more immediate demands of the rising generation. He therefore advises the establishment of at least 3 departments of a territorial university at as early a day as practicable, the departments thought most essential being a school of mines, a normal school, and a scientific and classical school.

No information has reached this Office of any scientific, theological, legal, or medical schools in this Territory.

## SPECIAL INSTRUCTION.

#### EDUCATION OF THE DEAF AND DUMB.

In accordance with a law providing for the education of the deaf-mute and blind children of Montana, 2 deaf-mutes are being educated at the Columbia Institution, Kendall Green, near Washington, D. C., at an annual expense to the Territory of $300 each, this covering board, tuition, clothing, and medical attendance.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. R. H. Howey, *territorial superintendent of public instruction, Helena.*

**[Term, 1881 to 1883.]**

*a* From United States Census of 1880.

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

A territorial board of education, comprising the governor, the secretary of the Territory, judges of the supreme court, and the Roman Catholic bishop of New Mexico, was created in 1863 and still appears to have a nominal existence. The same law provided for a territorial superintendent, to be appointed by the governor with consent of the legislative council for a term of 2 years; but in 1874 the duties of this office were transferred to the territorial librarian. Local officers are county boards of supervisors or commissioners of 3 members elected by the people for 2 years.

### OTHER FEATURES OF THE SYSTEM.

As the governor remarks in his report to the Secretary of the Interior, the legislature has from time to time passed acts relating to education which being liberally construed constitute a respectable school system, although not a complete one. The chief trouble, he says, lies in neglect to execute the law, which in some localities is not carried out at all and in others but indifferently. The system provides for compulsory education during 5 months of the year; for free schools, open to all children without regard to religious creed, nativity, or condition; also, for reports of school statistics from county officers to the territorial librarian and from him to the legislature. One-fourth of a tax of 1 per cent. on the property of the Territory and a poll tax of $1 on each voter are set apart for the support of public schools. These funds, a correspondent writes, if properly collected and honestly turned over, would be sufficient to keep up a fair average school in every school district for 3 months in the year; but they are not always or even generally so collected and applied. The county sheriff is tax collector, and the school commissioners have no control over the funds.

GENERAL CONDITION.

In the absence of territorial reports on education the United States census for 1880 furnishes the latest information respecting schools in New Mexico. From a lack of statistics for the year preceding or for any other recent years, it is impossible to institute comparisons showing progress or otherwise. A decided advance appears, however, during the decade. With about the same number of youth to be educated there were 4,755 attending all classes of schools in 1880 against 1,798 in 1870. The governor thinks a disposition to encourage education is rapidly growing and intelligence becoming more general through the agency of newspapers, which have been established in all the principal towns. A scattered population and the prevalence of two languages he mentions as great difficulties in the way of prosperous schools in this Territory, and thinks it may be wise for Congress to deal with the subject so far as to see that the true American idea of public schools be carried out, ample and equal advantages be provided for all classes, and aid afforded if necessary from the National Treasury.

From a sketch of the educational condition prepared by Hon. W. G. Ritch, secretary of the Territory, it appears that parochial and academic schools are sustained in all the more important towns and neighborhoods by the Roman Catholic Church, under the control of the Jesuits, the Christian Brothers, the Sisters of Loretto, and the Sisters of Charity, and that the various Protestant denominations are also represented in the larger towns by primary and academic schools. He says the Roman Catholic schools are largely supported in most of the counties by the public school funds and those of other denominations generally by tuition fees or private contributions or both, the greater part of the private funds coming from outside of the Territory. He thinks the present system might by proper management produce good schools, as it does even now in a few instances, although as a whole its workings are most unsatisfactory. But, since the territorial legislature cannot be induced to make the changes necessary to an efficient administration, and considering the peculiar difficulties existing here, he advises that relief be sought in congressional legislation. Among the features he would have thus established are a territorial board of education, comprising the governor, secretary, three judges of the supreme court, president of the council, and speaker of the house; the secretary to be superintendent of schools; the board to have full power, under general restrictions, to make all laws necessary for the establishment and government of the schools; school taxes to be paid over to the proper officer out of the first moneys collected, subject to the order of the board, and an equal sum to that raised by tax to be appropriated from national funds; the schools to be taught in the English language, but the study of Spanish also to be allowed when desirable.

[a] This was 6 to 16 in 1879–'80; in 1880–'81, 6 to 18.

(From reports of Hon. John Taylor and Hon. L. John Nuttall, territorial superintendents of district schools, for the two years indicated, with written returns from the same.)

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

The public school officers are a territorial superintendent of district schools, elected for 2 years; a county superintendent of the schools in each county, elected for the same term; and 3 trustees for each school district, who are elected at first for terms of 1, 2, and 3 years, and subsequently each for 3 years. Boards of examination consisting of 3 persons are appointed by each county court to examine teachers and grant certificates.

### OTHER FEATURES OF THE SYSTEM.

School moneys are derived from a tax of 3 mills on $1 of ordinary property, from taxation of railroads, sale of estrays, and a special district tax, not to exceed 2 per cent. a year and to be levied only by a two-thirds vote of the taxpayers. These moneys are apportioned on the basis of the number of youth of school age. It is the duty of trustees to employ teachers; to provide school-houses, furniture, and apparatus; to visit officially each school in their district at least once each term; and to take an annual census of children 6 to 18 years of age. They may at their option collect tuition fees. The territorial and county superintendents and the president of the University of Deseret in convention determine what text books shall be used in the district schools, and books thus adopted cannot be changed within 5 years. Persons eligible to employment as teachers must hold a certificate as to their capacity and moral character. The normal certificate of graduation from the University of Deseret, indorsed by the board

of examiners as to the moral character of the applicant, entitles the holder to be chosen as a teacher in any of the district schools. The amended school law of 1880 changed the school age from 6–16 to 6–18, the first enumeration of children of the extended age being required to be taken on or before the second Monday in June, 1880, and at the same time annually afterwards.[1]

### GENERAL CONDITION.

A comparison of the statistics for 1880–'81 with those for the preceding year shows an increase in youth of school age, in enrolment and average attendance, in number of districts reporting and of schools, in length of term, and in whole number of teachers, there being fewer men but a much greater number of women. A financial gain is shown in increased valuation of school property and in greater receipts to meet the growing expenses. The superintendent says, too, that in his visitation of the schools he found much improvement in the style and quality of many new school-houses, as well as in the qualifications of a considerable number of the teachers, the normal classes of Brigham Young Academy, Provo, of Brigham Young College, Logan, and of the University of Deseret now graduating from 30 to 40 yearly.

### ANTI-MORMON SCHOOLS.

There were 60 schools of this class in the Territory in 1880–'81, in most cases supported by and under the control of Protestant and Roman Catholic churches. Among the number of those reporting were 36 elementary schools (part of them free, others asking a small tuition fee), with an aggregate attendance of 1,760. For those of academic rank reporting, see Table VI of the appendix, and a summary of the same in the report of the Commissioner preceding.

## TRAINING OF TEACHERS.

### NORMAL DEPARTMENTS.

The law appropriates $5,000 a year for the University of Deseret, provided 40 pupils annually shall be instructed, free of charge for tuition, books, and apparatus, in its normal department. Said pupils are to be selected by the territorial superintendent from persons nominated by the board of examination of the several counties, on condition that for each year's free tuition received they shall teach one year in the district schools. The statistics for 1880–'81 are: Instructors, 2; students, 45; graduates, 18; course of study, 1 year of 40 weeks.

A normal department, with a two years' course, was reported in connection with Brigham Young Academy, Provo. There were 20 students in attendance, 11 of whom expected to graduate at the close of the year.

### TEACHERS' INSTITUTES.

While there is no territorial provision for the holding of institutes, such meetings are recommended by the superintendent; they seem to have been established and sustained in at least 2 counties and to have been productive of great good.

## SUPERIOR AND SCIENTIFIC INSTRUCTION.

### UNIVERSITY OF DESERET.

There were in 1881 no institutions for superior or scientific instruction reported in the Territory, except the University of Deseret, Salt Lake, and it had only preparatory, academic, and normal departments. The course of study comprised English literature and history, geography and general history, mathematics, chemistry, physical and political science, natural history, Latin, and Greek. There were 3 instructors and 128 male and 74 female students in 1881.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. L. JOHN NUTTALL, *territorial superintendent of district schools, Salt Lake City.*

[Term, August, 1881, to August, 1883.]

[1] Changed to July by an amendatory act of the next legislature.

(Statistics for 1880 from United States Census; those for 1881 from the report of Hon. J. S. Houghton and a return of his successor, Hon. C. W. Wheeler.)

## TERRITORIAL SCHOOL SYSTEM.

### OFFICERS.

The public school affairs of the Territory are intrusted to a territorial superintendent of public instruction, appointed for 2 years by the governor with the advice and consent of the legislative council, and to a territorial board of education, comprising the territorial superintendent and one suitable person from each judicial district, appointed by the governor for 2 years. For each county there are a county superintendent of common schools, elected by the people for 2 years, and a county board of examination, comprising the county superintendent and 2 teachers of the highest grade, chosen by him; for each district, a board of 3 directors, elected for 3 years, with annual change of one, and a district clerk, elected for a like term. The directors of incorporated city or town districts may elect a city or town school superintendent, who may be one of the teachers and shall have control or management of all the schools in his district. Women are eligible to school offices and may vote at school meetings.

### OTHER FEATURES OF THE SYSTEM.

The moneys for the support of the public schools are derived from the interest on the fund accruing from the sale of lands donated by the United States, from county taxes of

3 to 6 mills on $1, and from fines for breach of license and penal laws. All school moneys apportioned by county superintendents to the several districts are apportioned according to the number of youth of school age. On the vote of qualified electors additional sums may be raised by special district tax, not to exceed 10 mills on $1 for maintaining schools or for building and furnishing school-houses; and in any school district composed of an incorporated city or town an additional tax of 5 mills may be levied for tuition purposes. In order to receive their portion of public school money, districts must have maintained a public school taught by a qualified teacher for at least three months the preceding year. Since 1881 each incorporated city or town has formed a school district, and all such districts having 300 or more school children are required to establish graded schools, but no other language than English and no mathematics higher than arithmetic may be taught therein. Two or more districts may unite to establish graded schools, and any single district may have the same power. District clerks must take an annual census of all persons between the ages of 4 and 21; failing to do this at the proper time they are individually liable for the full amount the district may lose thereby. The territorial board of education prescribes the text books to be used in the public schools and the methods of instruction and discipline. It is the duty of the territorial superintendent to hold annually a territorial institute; that of county superintendents, to hold annually county institutes. In order to draw pay, teachers must hold certificates in full force either from the territorial or a county board of examination. To obtain the former, which are good for 3 years in any part of the Territory, the applicant for examination must hold a first grade county certificate and must have taught for 3 years; the latter are of 3 grades, good for 1, 2, and 3 years in the county where issued. Teachers must keep a register and must make an annual report to the county superintendent or forfeit their last month's pay.

### GENERAL CONDITION.

The figures respecting the general educational condition in the two years under comparison are so incomplete that they fail to indicate decisively the measure of advance or retrogression in 1880–'81. The returns, too, are said to be imperfect. As far as given, they show that with a school population reported nearly 3,000 less than in 1879–'80 there was yet an enrolment in the public schools only 26 short of that reported the year before, while average daily attendance was greater by 729, although the school-houses for the reception of public pupils appear to have been fewer by 43 and the teachers in them fewer still. Receipts for public schools were larger than they had been; the expenditure for them is not given.

### CHANGE OF SCHOOL LAW.

A revision in 1881 of that part of the school law which related to cities and towns made each incorporated one a school district; changed the number of school children required for a graded district from 500 to 300; limited the instruction to be given in such districts, as above indicated, to studies in English branches and arithmetic; and gave permission to levy in them, with consent of voters, a building tax of 10 mills in any year and a tuition tax of 5 mills.

## TRAINING OF TEACHERS.

### NORMAL DEPARTMENT OF WASHINGTON UNIVERSITY.

The normal department of the University of Washington, Seattle, gives a 2 years' course that includes the higher English branches and methods of teaching. There were 12 students in the senior preparatory, 8 in the first class, and 2 graduates reported for this department in 1880–'81.

### TEACHERS' INSTITUTES.

In counties containing 10 or more organized school districts the law requires the county superintendent to hold annually a teachers' institute, makes it the duty of the teachers to attend and participate in the exercises thereof, and permits them to adjourn their schools during the session of the institute. This requirement was generally complied with in 1880–'81, as there were 33 institutes reported, some counties holding more than one. The meetings in several counties were large and enthusiastic.

## SECONDARY INSTRUCTION.

### PUBLIC HIGH SCHOOLS AND OTHER SECONDARY SCHOOLS.

The superintendent of public instruction reports 10 graded schools in the Territory, but gives no information in regard to public high schools. The United States Census

gives 5 high schools or schools with high school departments, but does not distinguish the number of pupils attending or the teachers employed in these schools from others, as was done in 1850 and in 1860 for the country generally.

For statistics of private academic schools reporting, see Table VI of the appendix, and for a summary, the report of the Commissioner preceding.

## SUPERIOR INSTRUCTION.

### UNIVERSITY OF WASHINGTON TERRITORY.

The University of Washington Territory, Seattle, open alike to both sexes, is a part of the public school system and is supported by legislative appropriations, interest on endowment, and tuition fees. It offers 4 years' classical and scientific courses, leading to appropriate degrees, and 2 years' normal and commercial courses. A course of law lectures was delivered to students in 1880–'81 and will become a permanent feature of the university. There were 137 students enrolled: 27 in the collegiate department, which includes the advanced classical, scientific, normal, and commercial students, and 33 in the senior and 77 in the junior preparatory classes.

## EDUCATIONAL CONVENTION.

### WASHINGTON TERRITORY TEACHERS' INSTITUTE.

Information in regard to the opening exercises of the sixth annual meeting of this body at New Tacoma is wanting. At the evening session held August 17, 1881, R. C. Townsend delivered a lecture upon the question "Is teaching a profession?" The following day, which was the closing one, G. W. Mattice, of New Tacoma, presented "Methods of teaching the greatest common divisor and least common multiple," which was fully discussed. Prof. F. P. Gilman, Seattle, spoke on "Mineralogy in the public schools by object lessons." The subject of "Reading" was taken up and several essays read. At the afternoon session methods of teaching arithmetic were discussed. Mrs. L. P. Anderson delivered an address on botany and Superintendent Houghton a lecture on physiology. Methods of classification and management of schools were spoken of by F. E. Eldridge, of Slaughter, and C. A. Gilbert, of Riverside. With appropriate remarks by Dr. Houghton, Prof. A. J. Anderson, and others, the institute adjourned, to hold its seventh annual meeting at Seattle.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JONATHAN S. HOUGHTON, *territorial superintendent of public instruction, Olympia.*

[Term, November, 1880, to January 9, 1882.]

Mr. C. W. Wheeler is understood to have been chosen to succeed Mr. Houghton at the date above given for a term to reach to 1884.

## WYOMING.

(Figures for 1879–'80 from the Compendium of the United States Census for 1880; those for 1880–'81 from message of Governor John W. Hoyt for 1881.)

### TERRITORIAL SCHOOL SYSTEM.

#### OFFICERS.

The territorial librarian continued to be ex officio superintendent of public instruction for the Territory; for counties there were superintendents elected by the people every 2 years; and for school districts boards of 3 trustees, each elected for 3 years, 1 being changed each year.—(School laws, 1878.)

#### OTHER FEATURES OF THE SYSTEM.

The public schools are sustained from a poll tax of $2 on each voter, from 2 mills on $1 of all taxable property, and from the proceeds of fines and forfeitures.

The people at the annual district meeting may vote a district tax to supply any deficiency in the teachers' fund, to lease or purchase sites and build and keep in repair school-houses, to supply them with necessary fuel and appendages, and to purchase school libraries and books for indigent children, the sum for library not to exceed $100 in any one year. Women of 21 years of age may vote for and be elected as school officers, and as teachers are to receive the same pay as men if equally qualified. Where there are 15 or more colored children in a school district, a separate school for them may be established, but legally established district schools are equally free to all children resident therein over 7 and under 21 years of age; and a compulsory law requires parents and guardians, under a penalty of $25 fine, to send their children of 7 to 16 years of age to some public school at least 3 months each year or present reasons for their absence. Persons without higher certificates offering to teach must be examined by the county superintendent, whose certificate is good for 1 year, and must make reports of school statistics at the close of each term or forfeit their pay, at the discretion of the district

board. The county superintendent and the district board of directors may decide whether a school of higher grade than the ordinary district school shall be established in the district, may locate and erect a suitable house for said school, and may decide the number of teachers to be employed and studies to be pursued, this last subject to the decision of the Territorial Teachers' Institute, which determines ordinarily every 5 years the studies of the like grade of schools in the Territory. This institute must be held annually and continue in session not less than 4 nor more than 10 days, and be free to all teachers and those preparing to teach in the Territory. It must decide upon the books and the system of instruction to be used in the Territory, and also decide upon the manner, place, and time of holding institutes in each county.—(School laws.)

### GENERAL CONDITION.

The governor states in his message to the legislature that the public schools in 1881 continued to prosper, that new ones were opened, that liberal sums were expended for the erection of new school buildings and the enlargement of old ones, and that great efforts were made in the larger towns to secure experienced and efficient teachers, who did good work when secured. The graded schools, though laboring under the many disadvantages of a new Territory, compared favorably, he says, with schools of like general character in the States most advanced.

The school system is claimed to be one of the best. As yet there is no indication of any institution belonging to the public school system of a higher grade than the high school. In the absence of corresponding data for two years, few comparisons can be made between 1880 and 1881, and these indicate the same number of schools in the latter year as in the former, but with fewer teachers, a smaller average rate of pay, and a smaller enrolment.

At a few points in the Territory libraries were begun, and it was urged that something in this direction worthy the intelligence and liberality of the people be undertaken without further delay.

One thing which may go to promote education in the future is the organization at the capital, in 1881, of an association for the encouragement of historical and scientific research, the promotion of the practical industries of the Territory, the collection and preservation of authentic records of territorial history, the formation of historical, scientific, and industrial museums, and the enlargement of the territorial library, which was already of considerable size and for 1880 and 1881 received additions of about 700 volumes yearly.

Another important point was an appropriation by Congress in 1881 of 22 sections of public land for a future university.

## CHIEF TERRITORIAL SCHOOL OFFICER.

Hon. JOHN SLAUGHTER, *territorial librarian and ex officio superintendent of public instruction, Cheyenne.*

Mr. Slaughter has acted as ex officio superintendent since 1873. His next term reaches from March 31, 1882, to March 31, 1884.

## EDUCATIONAL ASSOCIATIONS AND CONVENTIONS.

### NATIONAL EDUCATIONAL ASSOCIATION.

#### PROCEEDINGS OF THE GENERAL ASSOCIATION.

By invitation of Hon. Gustavus J. Orr, State school commissioner of Georgia, the National Educational Association held its twentieth annual meeting at Atlanta, Ga., July 19–22, 1881. An unusual interest attached to this meeting in the far South, and important educational results were expected from it. The meeting was called to order by President Smart, of Indiana, and opened with prayer by Rev. Dr. Gwin, of Atlanta. Governor Colquitt then gave the address of welcome, in which he said: "If I could convey to you a complete sense of our esteem and of our admiration, indeed you would be prompted to believe that in this city and on Georgia soil the schoolmaster is at home, and nowhere else is his noble mission more honored." Responses were made by the president and others, and were followed by the inaugural address of the president, "On the value of schools." Prof. C. C. Rounds, principal of the State Normal School, Farmington, Me., then read a paper on the "Lines of advance in education," showing that teaching is assuming a more definitely professional character; that methods of teaching have advanced; and that courses of study have been extended from classics and mathematics to cover the realms of science, art, and industry; that a transition from principle to application is going on, resulting in an extensive conviction that ability to work is a necessity for all; that the only safe state is that in which work is honorable and well rewarded; and that the training of the hand is as legitimate a function of the school as the training of the head. Then followed a paper on "What shall we teach in our elementary schools?" by Superintendent A. J. Rickoff, of Cleveland, Ohio, who in a long and well arranged paper said that much in the curriculum of the elementary schools, if tested by its practical value in the pursuits of life, would be cast aside as worthless. The discussion which followed developed a considerable difference of views.

General Eaton, United States Commissioner of Education, opened the evening session of the general association with an address on "Education and the building of the state," the leading point of which was that to build a state is not to locate a certain number of people in a given territory. It is to build up the whole body politic in its interests, individual, social, civil; its ideas, doctrines, sentiments, laws, customs, and institutions. To understand man, we must look at him in combination with his fellows. It is in society that he first feels what he is and first becomes what he can be. The earliest and simplest form of association is the family. This enlarges itself naturally into the clan and tribe, which then, by combining, form states, federations, and nations. Tracing the history of ancient in contrast with that of modern nations, he said that "the motion of the ancients in the effort to reach truth was like that of the rocking horse, while that of the moderns is more like the course of the thoroughbred racer." This speech closed with some remarks eulogistic of President Garfield, which were received with great applause. After the announcement from the chair of the committee for nominating officers the association attended a complimentary banquet at the opera house, tendered by the citizens and teachers of Atlanta, over 500 invitations to which were issued. The tables were spread with an elegant collation, choice music was furnished, and the social exercises were continued till an early hour in the morning.

"Some essentials in the development of a school system," by Hon. D. F. De Wolf, State commissioner of common schools of Ohio, opened the morning session of the second day. This paper, prepared with great care and ability, urged the necessity and advantage of adding moral and æsthetic instruction to that usually given in the public schools. The work of education, he said, is no longer confined to the teaching of the three R's. It embraces the awakening of ideas relating to success in life. The state is not interested alone in the intelligence of the individual, but much more in his relations to success in his special calling. Society is interested in the thrift of each individual, and demands not only the development of knowledge and skill, but that the virtues which are essential to the comfortable conditions of life be inculcated in the schools, such as self denial, prudence, and temperance, and a high regard for art, music, literature, &c. Men stand aghast at the prophetic rumblings of an unreasoning and relentless communism, and well they may. In a more thorough study of this problem of public education and higher thoughts concerning it than have ever prevailed lies our only safeguard. There must be fullgrown men or women to conduct the public school system instead of undeveloped boys and girls or martinets trained only in the narrow experiences of school

room life. The chief essential to the employment of talent and ability is such a warm social interest as will direct the best and most cultured minds to assume and maintain an interest in the work. Hence the coming system demands such a social position for the teacher as will render the highest culture available in the schools. So long as teachers are taken largely from classes whose narrow means force them to adopt teaching for a living, and are then denied social recognition, they should not be criticised for their shortcomings in the formation of character. Next came a paper by Prof. N. A. Calkins, assistant superintendent of the city of New York, on "The teacher's work in the development of mental and moral power." He asked whether, when the teacher receives the pupil from the hand of nature and leads him into the school room, he takes up the work at the point where nature left it and conducts the youth onward in the same royal road? Knowledge of the being to be taught as well as of the subjects and methods of instruction is indispensable to success in the development of power. Then, given a skilful teacher, with faithful labor and patient waiting, success will crown the work. Hon. M. A. Newell, State superintendent of public schools of Maryland, next read a paper on the proposed "Revision of the common school curriculum," in which he suggested (1) the addition of new subjects of instruction; (2) a new apportionment of the old studies with regard to the time devoted to them; (3) a rearrangement of studies in the order of time. Children should be taught morals, their duties to one other, the virtues of honesty, truthfulness, and purity; also, a few homely lessons in the laws of health. The revision, however, will be incomplete till there be added some form of manual industry.

The evening session opened with a paper on "The necessity for spelling reform," by T. R. Vickroy, of St. Louis, Mo., in which the historical claims of the current orthography were discussed and the hindrance it forms to the acquisition of useful knowledge by public school pupils was demonstrated by a reference to the meagre results of public instruction in England and this country compared with the outlay made. A valuable paper was then read by Hon. J. P. Wickersham, long State superintendent of public instruction of Pennsylvania, on "The leading characteristics of American systems of education," which, he said, as they exist here, may be regarded as indigenous, there being nothing in the Old World from which they could have been copied. The peculiar features of the American school systems generally are that the schools are open to all children of a proper age, without regard to sex, race, or rank, and largely without regard to color; that they are free and unsectarian; that the National Government has no control; that the several States hold this control, and that even they have not much to do directly with the work of education, the real power resting much nearer the people, in the hands of the township and city governments, so near the people as to touch their homes and hearts. This address was followed by one by President L. C. Dickey, A. M., of Georgia, who spoke in opposition to public schools, free scholarships, and monumental institutions, which produced a lively interruption. Mrs. Louise Pollock, principal of the National Kindergarten and Normal Institute, Washington, D. C., in a brief address, presented the advantages of the Kindergarten teaching in the primary schools and called for the introduction of its methods in the primary departments of public schools.

On report of the nominating committee, G. J. Orr, of Georgia, was elected president for the ensuing year; W. D. Henkle, of Ohio, secretary; and H. S. Tarbell, of Indiana, treasurer.

On the third day, the morning session of the general association was called to order by President Smart, and prayer was offered by Dr. L. L. Rogers, of Tennessee. John B. Peaslee, superintendent of public schools in Cincinnati, then read a paper on "Moral and literary training in the public schools," in which he advocated the study of English literature as a distinct branch in the high schools and wanted classes to begin with the authors of to-day and go back to the older ones, instead of beginning with the early writers and coming down to the present day. He then called attention to some of the errors in our methods of teaching. One is in the amount of time given to arithmetic, which is more than all the other studies combined receive, while little time is given to literature and composition. Another mistake is the pernicious method of teaching history, compelling the pupil to memorize page after page of dates and facts. Still another is crowding into the high school course much that belongs to the colleges and universities. He believed that gems of literature, properly taught in schools, would elevate and make our boys and girls grow up into better and nobler men and women. Dr. A. W. Calhoun, a distinguished oculist of Atlanta, Ga., then read a paper on "The effect of student life upon the eyesight," in which he referred to the fact that it is in the school room that the larger and most important part of the child's life is spent, and that, while the whole energy is bent upon the proper development of the brain, too little attention is given to the importance of a healthy eye, which, while itself is developing, undergoes great changes from the duties it is called on to perform. The near-sighted eye is too long a ball and is absolutely diseased, the extra convexity making its appearance rarely before the fifth or sixth year, which is about the time children begin to go to school. It is

produced by overwork, and the elongation gradually but constantly increases through all the years of school life, even to the twentieth or twenty-fifth year. Nearsightedness in city schools is more frequent than in rural districts, owing to the better surroundings in the country, where there are less strain and more rest. Colored children are remarkably free from nearsightedness. Some instruction as to the kind of glasses to be used, the amount, direction, and color of light to be admitted into the school room, concluded this address. After a spirited discussion of the two papers read on Tuesday and Wednesday, "What shall we teach in our public schools?" and "The proposed revision of the common school curriculum," a communication from the senate inviting the association to seats with that body in the senate chamber was received and read.

In the evening Mrs. Pollock, of Washington, D. C., gave an exhibition of the Kindergarten system and its working, which was much enjoyed; while at De Give's Opera House Prof. Wm. I. Marshall, of Fitchburg, Mass., in an illustrated lecture, gave a description of the great Yellowstone National Park.

On the fourth day the general association listened to a paper by F. Louis Soldan, of St. Louis, on "The century and the school," a long and exceedingly interesting paper, of which only the central thought can be given. The century makes two distinct demands on schools. One is that the school shall be in harmony with the practical aims and spirit of the times; the other, that it shall help to guard those ethical interests which are as old as the human race itself, which alone constitute man a civilized being, and which make uprightness and charity a part of human nature. Hon. Joseph E. Brown, United States Senator from Georgia, was then introduced, and said: "As a citizen of Atlanta and Georgia, I take pleasure in uniting with what has been said by the governor of our State, as well as by our citizens whom you have heard, that you are cordially welcome to our State and city. Many of you come from the Northern and Western States. We are proud to see you here on that account. The time was when we had differences. That time has passed. We are now one people again, and one people we shall remain forever. The cause of our struggle has been forever removed, and there is now no question that will divide the people in the future. I am proud to know that this is so, and I shall do all I can to promote the interests of the whole nation, and especially the cause of education." He then referred to the remarkable age in which we live, especially in the progress of education; and, while he differed in politics from many of his brethren in the North, he said he was grateful for the educational doctrines they held, enunciated, and applied. He then spoke of the peculiar troubles of the South in this direction, saying that at the close of the war 4,000,000 people had been changed from slaves to freemen and that it is the interest, wish, and duty of the southern people to make them as good citizens as they can. But they had lost the value of them, $2,000,000,000. Two armies were supported on their territory. They were left poor, and must have aid. The Senate was a unit on this view of their need, and the outlook was hopeful. He sat down amid great applause, and a vote of thanks was tendered him for his address.

Mr. Bicknell, chairman of the committee on resolutions, reported a preamble and two resolutions in reference to national aid, which were unanimously adopted. Mr. Bicknell subsequently introduced a resolution heartily commending the arrangement to include in the proposed cotton exhibition at Atlanta a representation of education, and pledged the coöperation of the association, which was adopted with much enthusiasm. Mr. William T. Harris, of St. Louis, then read a paper giving an account of his visit to Brussels last August as the representative of the association at the International Educational Congress; and a committee was appointed to prepare the way for a representation of education at the proposed International Exposition at Boston in 1885. John D. Philbrick, Massachusetts; John Eaton, Washington; J. P. Wickersham, Pennsylvania; H. S. Thompson, South Carolina; A. J. Rickoff, Ohio; T. W. Bicknell, Massachusetts, and J. H. Smart, of Indiana, constitute the committee. The committee on resolutions reported a series of resolutions on wider reading of educational literature, on the need of universal education as vital to our institutions, on the necessity for normal schools to train teachers for the common schools, on the satisfaction with which the progress of free school training in the South was witnessed, on the amount of good done by the National Bureau of Education in disseminating valuable educational information, and deploring the mortal assault upon President Garfield.

Then, after a few remarks from the president elect, Dr. Orr, the association adjourned to meet next year at Saratoga.—(Journal of Education.)

### DEPARTMENT OF HIGHER EDUCATION.

On the afternoon of the second day, the department of higher education met, and President Lemuel Moss, of Indiana, being in the chair, opened the meeting with an address, the leading thought of which was that all questions of human interest are, at bottom, questions of philosophy, and that no competent and honest teacher in this day and nation can be otherwise than serious and anxious concerning the philosophical con-

ceptions which are to dominate and direct the thought and life of the people. President I. W. Andrews, of Marietta College, Ohio, followed with a paper on "The study of political science in colleges." Among the principal reasons given for this study was this, that the student would there lay the foundation of this knowledge without partisan bias. Dr. H. H. Tucker, of Atlanta, was then introduced and read an entertaining paper on "The advancement of the higher education," opening with the statement that prominent and influential men are not usually looked for among teachers and stating that the profession, even in its higher departments, involves elements which are apt to belittle the mind and character. Its sphere of thought is narrow. A teacher's life is almost necessarily monastic. His business shuts him out of the world. A recluse never becomes great. Not having means to travel, he becomes provincial in habits of thought. Repeated stooping to inferior minds lowers his stature. Teachers should hold a higher rank, and be worthy of it. The style of this production was unique, its delivery producing a high degree of enthusiasm.

### DEPARTMENT OF NORMAL SCHOOLS.

At 3 P. M. of the third day the department of normal schools, Jerome Allen, of Geneseo, N. Y., president, proceeded to elect as its officers for the ensuing year C. C. Rounds, of Maine, president; T. C. H. Vance, of Kentucky, vice president; and Jerome Allen, of New York, secretary. After a short address from the president on the "Necessity of a normal school in a public system of instruction," Prof. J. C. Gilchrist, president of the Iowa State Normal School, read a paper on "What constitutes a normal school." He said the purpose of a normal school is the preparation of teachers for positions in the school system of the people; it must instruct in the sciences; must teach the science of the mind, the philosophy of education, the systems of instruction for all phases of school room work; must maintain a model or training department; must develop a professional spirit with that of noble manhood and womanhood in all its pupils, uniting to all this true culture in goodness of heart and agreeableness of manners. He would have the normal school point out the sources of all moral knowledge, and would bring to bear on every pupil a moral power by which habits of the purest virtue will be inculcated, both by conscious and unconscious tuition. Mr. Vance, of Lexington, Ky., following with a paper on "The best normal training for country teachers," severely criticised normal schools. Mr. DeWolf, State school commissioner of Ohio, to some extent agreed with him. Commissioner Orr, of Georgia, said that he was older than many present, but was young in this matter. The Atlanta University for colored pupils was the only college in Georgia that professed to be a normal school. The teachers turned out from normal schools are said to be far superior to any others, and he felt very deeply the importance of having in the State a normal school for the white and one for the colored teachers.

### THE DEPARTMENT OF ELEMENTARY SCHOOLS

met on the first day, with Hon. John M. Bloss in the chair as president. A carefully prepared paper on "The philosophy of illustration" was read by Ex-State Commissioner J. J. Burns, of Ohio, and followed by another on "The education of the sensibilities," by Superintendent John W. Dowd, of Toledo, Ohio, in which he said that schools cannot give too much intellectual power, but they may give too little of refined sensibility. School life touches character at every point. You can no more teach school without teaching morality than a mason can lay brick into a grand imposing structure without the aid of mortar.

The department, on report of its nominating committee, elected Superintendents J. M. Bloss, of Indiana, A. L. Rogers, of Louisiana, and J. J. Burns, of Ohio, as president, vice president, and secretary for the ensuing year.

### DEPARTMENT OF INDUSTRIAL EDUCATION.

On Friday morning the department of industrial education was called to order by President E. E. White, of Indiana. The first business transacted was the election of C. O. Thompson, of Worcester, Mass., as president for the ensuing year; Henry H. Fick, of Cincinnati, Ohio, vice president; and S. R. Thompson, of Lincoln, Nebr., secretary; and a vote of thanks to the retiring president. President White read a short address on the general objects of industrial education, which was a brief statement of the principles advocated in his address on "Technical education in public schools," given last year at Chautauqua. The secretary, S. R. Thompson, in his report, gave the names of the industrial schools established during the year, of new departments in schools already established, new and improved facilities for teaching manual arts in schools for deaf-mutes and the blind, as well as in reform schools, and the general drift of public opinion in regard to industrial training. Resolutions requesting the United States Commissioner of Education to publish certain documents on this subject and requesting the secretary to continue his investigations were adopted; an excellent address, by Prof. L. S. Thompson, of Purdue University, on "The decay of apprentice-

ship—its causes and remedies," was then delivered, followed by an exhibition of some specimens of the work done by the students, illustrative of the course of study, especially in drawing, after which the department adjourned.

### ANNUAL MEETING OF THE DEPARTMENT OF SUPERINTENDENCE.

This body, made up of State and city superintendents and other educational officers from all parts of the country, held its annual meeting in the hall of the Cooper Union, New York, from Tuesday to Thursday, February 8–10, 1881. The attendance was large and the programme well sustained. The address of welcome was by Stephen A. Walker, president of the New York board of education. He referred to the educational character of the Cooper Institute and to the hall as "the cellar of oratory." William T. Harris, LL. D., of St. Louis, then delivered an address on "The present aspect of public education in America and Europe."

Wednesday morning the meeting opened in the hall of the Young Men's Christian Association, with a paper on "The unification of school statistics," by Andrew McMillan, of Utica, N. Y., followed by addresses on "Weak places in our systems of public education," by Hon. J. P. Wickersham and Hon. B. G. Northrop; "The conservation of pedagogic energy," by Charles O. Thompson, of Worcester, Mass.; and "Our schools and our forests," by Dr. F. B. Hough, of the Agricultural Department, Washington. Thursday's session began with a paper by Mrs. Mary H. Hunt, of Brooklyn, N. Y., urging the introduction of scientific temperance teaching in schools and colleges, at the close of which Hon. John Eaton, Commissioner of Education, read a paper on "Museums illustrative of education." He was followed by Mrs. Walworth, a school commissioner of Saratoga, N. Y., who pressed the inquiry whether something could not be done by way of teaching a few of the elementary principles of morality in the schools, which gave rise to a long and inconclusive discussion. J. W. Patterson, State superintendent of New Hampshire, then read a paper on "National aid to education," the discussion of which finished the programme; and after the usual vote of thanks the meeting adjourned.—(Journal of Education.)

### NATIONAL COUNCIL OF EDUCATION.

A council of education was created by the National Educational Association at its nineteenth annual meeting at Chautauqua in July, 1880. The membership consists of 51 persons who must belong to the parent association and be clearly identified with educational work. Three members were elected by each of the five departments, the elementary, higher, superintendents', normal, and industrial; 12 were elected by the directors of the association, and 24 others by the 27 thus elected. After the first year each of the departments is to elect 1 member biennially, the directors 2 annually, and the council 4 annually, the term of service being 6 years.

This organization was seen to be necessary from the fact that the annual sessions of the National Educational Association were too short to allow of any final decision on many important questions presented. It was also considered that the work of the association would be greatly facilitated if subjects were brought before it in the matured form which the deliberations of a committee would give them. Committees representing the several departments of education are to be appointed by the council, and may be called on at any time for the consideration of educational questions and the expression of opinion, and each member must engage to serve on the committee to which he may be appointed. The regular annual meeting of the council is to be held two days before that of the association and at the same place. An annual report must be made by the council to the association, setting forth the questions considered during the year and the conclusions arrived at and embodying a survey of such topics as seem to call for action on the part of the association.

The meeting of 1881 was held at Atlanta, July 19–21. After the arrangement by lot of the official terms of a portion of the members first elected and the transaction of other business, the reports of committees were submitted. Mr. E. E. White presented that on "Industrial education;" Mr. J. W. Wickersham, one on "Superintendency;" Mr. W. T. Harris, one on "Pedagogy in universities," and Mr. Eaton, one on "Hygiene." It was agreed that all titles be omitted in reporting the minutes of the meetings of the council. The officers elected for the ensuing year were: T. W. Bicknell, president; James P. Wickersham, vice president; E. E. White, secretary; and Messrs. D. C. Gilman, W. H. Ruffner, John Hancock, and J. L. Pickard, executive committee.—(Journal of Education.)

### NEW ENGLAND ASSOCIATION OF SCHOOL SUPERINTENDENTS.

This association, which holds two sessions during each year, met May 27 and again October 28, 1881, in Boston.

The first session was in many respects a notable gathering, both as to number of mem-

bers present and the interest and order of business. Only one general subject was before the convention, namely, "Resolved, that superintendents, unbiassed by personal considerations or political and social influences, should recommend the dismissal of incompetent teachers and the election of competent teachers only." This was divided by the executive committee into a number of subheads and assigned to various speakers. Secretary Dickinson answered the question "What constitutes a good teacher?" Dr. Philbrick, "How shall we get good teachers?" Superintendent Tash, of Portland, "How shall we keep good teachers?" Superintendent Aldrich, of Canton, "How shall we help teachers in their schools?" Superintendents Lambert, of Malden, and Parish, of New Haven, "Should teachers disabled from age and long service be retained?" Superintendent Marble, "How shall we get rid of the incompetent teacher?" and Superintendents Allard and Edgerly, "What shall we do when teachers are retained by political and social influence?" The general question being then before the meeting it was discussed by the superintendents named and a number of others, and was finally laid on the table, it being decided that in theory there could be no question as to a superintendent's duty in the matter.

At the subsequent session 31 members were present, Hon. T. B. Stockwell, of Rhode Island, in the chair. The first business was the report of a committee on Barnard's American Journal of Education, Mr. Bicknell chairman. Superintendents were solicited to aid in placing 100 sets of this work in the public and teachers' libraries of New England, and the responses from all present indicated a deep interest in the subject and willingness to assist. As on the previous session, the topics before the meeting were first discussed by members to whom they had been assigned and then by the association at large. Superintendent J. T. Prince answered the question "What is the best method of developing the intellectual faculties?" Superintendent Brown, the kindred one, "What are the means to secure the best mental discipline?" Superintendent J. Osgood treated of moral discipline; Superintendent G. C. Fisher, of physical development; and Superintendent Cogswell, of teaching and discipline. The last gave a résumé of the methods applied in Cambridge to ascertain the character of teaching and discipline. These included personal inspection, written examinations, and written reports from members of examining committees, the coöperation of the committees being thus secured in the removal of incompetent teachers. Superintendent Parker suggested that, prior to the application of the tests, teachers be given an opportunity to teach according to their judgment. He said that they were often given work beyond the power of the children and of themselves. Supervisor Littlefield, of Boston, thought that to only ask teachers to do what they think they can would make district schools of all graded schools. He said a superintendent of schools is as necessary as an overseer of a mill or of slaves. He questioned the utility of discussing these and similar topics, and of all such investigations. He feared they might lead to general doubt of all educational truths (such doubts having been a result of investigation in the religious world), and besides, in his opinion, there is no educational science or system of principles. These remarks led to an animated discussion, in which many members joined, and after the election of officers for the ensuing year the meeting adjourned.—(Journal of Education.)

## AMERICAN INSTITUTE OF INSTRUCTION.

The fifty-second annual meeting of the American Institute of Instruction was held at St. Albans, Vermont, July 5–8, 1881, the president, William A. Mowry, of Providence, R. I., in the chair.

The editor of the Journal of Education describes this meeting as eminently an educational success. The news of President Garfield's assassination came just in time to arrest the great throng that would have welcomed him to the first reception of a President by an educational association in Northern New England. But the higher teachers came in large numbers, probably a full thousand. The audience room of the Congregational Church was crowded to its utmost capacity, and the interest seemed to increase up to the culminating point, in the great out-door meeting in the public park and the closing reception at the home of Hon. Worthington Smith, on Friday evening.

The institute opened on Tuesday evening with an interesting and scholarly address from M. H. Buckham, president of the University of Vermont, on "The choice and use of books," after which several entertaining readings were given by Prof. S. S. Bloch, of Boston.

The second day was given to a consideration of national aspects of education in the broadest sense. The address of welcome by Governor Farnham, of Vermont, an excellent practical talk, was followed by the president's annual address. This commenced by saying that true education is wider than the schools, deeper than the curriculum of studies, and higher than childhood and youth, including, as it does, the school, the college, the trades, industries, and professions. He thought that arithmetic received too

much attention in the common schools; that more time should be given to language and its study; and that the high school curriculum should embrace more political studies, including the balance of power between the State and the nation and the duties of American citizens. Superintendent J. W. Patterson, of New Hampshire, gave an address on "Political education," in which various good reasons were given for making the study of politics universal. In the afternoon the audience listened for three hours, without showing signs of weariness, to the glowing word pictures of C. C. Coffin, of Boston, who spoke on "The physical geography of our continent," and to the fervid oratory of Dr. J. L. M. Curry, agent of the Peabody education fund, who made a stirring appeal for education in the South. Mr. Coffin's paper gave a most graphic description of the wonderful resources of our country, and showed the mighty influence it must exert in future ages. The address of Dr. Curry was the more valuable from the fact that his connection with the Peabody fund leads him into every part of the South to examine their educational interests and prepare the way for free schools. In the evening Dr. A. D. Mayo gave some of the results of his observations during the year in nine Southern States on the subject of education. On Thursday morning the institute listened to an address from President Greenough, of the Rhode Island Normal School, who outlined his ideal of the true educator. Professor Bloch, whose readings were one of the attractions of the entire session, discoursed on methods of elocutionary instruction; Professor Osbun, of the Salem (Mass.) Normal School, illustrated his method of manufacturing and using apparatus for the teaching of nature knowledge in common schools; Ex-Superintendent Small, of Salem, Mass., presented the moral, social, and æsthetic bearings of popular education in an address on "Jesus Christ, the model teacher;" Mrs. Julia Ward Howe read one of her admirable essay lectures on "The relation of education to our new social life;" and a lecture by Wallace Bruce on Sir Walter Scott closed the educational feature of the meeting. Friday morning was given chiefly to commemorative addresses on departed educators: George B. Emerson, of Massachusetts; David Crosby, of New Hampshire; and Nathan Bishop, of New York. A beautiful tribute was paid to Mr. Emerson by General H. K. Oliver, now the only surviving member of the first board of management of the institute.

A mass meeting in the open air, held in the afternoon, was a fitting close to the public exercises of this occasion. Mrs. Howe addressed the assembly on the grand mission of teachers; President Mowry read a poem composed for the occasion, which was then sung by the congregation; Rev. Charles Van Norden offered prayer, asking God to save the President; Mrs. Howe's "Battle Hymn of the Republic" was sung with great effect; President Mowry delivered an address alluding to President Garfield's intention of being present at the institute, and the sad event which had prevented it; and after other short addresses and the singing of the doxology the institute adjourned.—(Journal of Education.)

## AMERICAN SOCIAL SCIENCE ASSOCIATION.

The general object of this association is to promote the good of the community by the investigation of various social questions, including education, health, jurisprudence, and social economy. Its annual meeting for 1881 was held at Saratoga, N. Y., September 6–9.

The opening address by the president, Francis Wayland, of the Law School at New Haven, was an able presentation of the defects in our law-making system. At a meeting of the department of education, the chairman, Prof. W. T. Harris, of Concord, Mass., made a masterly extemporaneous address of an hour on education. While recognizing fully the vital importance of moral and religious training in early youth, he thought this should be attended to especially by parents and churches and that school education should be secular. A paper on the education of deaf-mutes was read by Dr. Edward Gallaudet, president of the National Deaf-Mute College. He expressed the opinion that the sign language and lip reading should both be used, some pupils being most benefited by one method and some by the other, but claimed that the sign language had important advantages over articulation in the greater rapidity and certainty with which it can be used. Mr. Charles Dudley Warner read a paper on the American newspaper, which concluded with the opinion that the moral tone of the newspaper is generally higher than that of the community in which it is published. A discussion of the temperance question was one of the most interesting of the session. Hon. P. Emory Aldrich advocated prohibition, presenting a solid and effective array of facts and figures, with the inevitable conclusions to be drawn from them. Dr. Leonard W. Bacon defended license and Hon. F. W. Bird argued for unrestricted traffic. Each presented a written paper, limited to half an hour. Dr. Bacon charged the comparative inefficiency of the license laws largely on prohibitionists, many of whom, he said, desired to have them fail, and were even willing to combine with liquor dealers to effect that end. Mr. Bird attempted to show that both license and prohibitory laws have proved a complete failure, neither

having reduced materially the consumption of liquors, and said that moral suasion is the only effective method of restricting the traffic. Each side was strongly presented, but the sympathy of the audience seemed to be decidedly in favor of prohibition. There was a crowded house to listen to George W. Curtis, of New York, on "Civil service reform." He gave a history of the civil service, showing that the reform he advocated would be simply a return to the principles and practice of early administrations.

The subject of insanity occupied considerable time, and there seemed to be a general agreement that the women in asylums for the insane should be attended by women physicians; also, that patients should have individual treatment as far as possible. Hon. Dorman B. Eaton, in summing up the debate, said that, after all, very little is known yet about insanity or its causes, as to when it really exists, or even what is an accurate and comprehensive definition of it. Mr. F. B. Sanborn expressed the opinion that there are now not less than 100,000 insane people in the country. Dr. Emily Pope, of Boston, read a paper on the women physicians of the country, showing wide and careful research as to their number, circumstances, and success. She thought the number in practice was about 390 or more. Mr. Robert P. Porter, of the Census Bureau, read a paper showing that the present State, county, and municipal debts of the country amounted to about $1,055,308,000. General John Eaton, United States Commissioner of Education, spoke on education at the South, giving many facts of interest. Rev. S. W. Dike read a paper on "Divorce legislation," and many other topics of interest were presented. The attendance was not large, the house frequently not being more than a quarter filled; but most of the addresses will be printed, and will thus reach the public.—(Congregationalist.)

## AMERICAN PHILOLOGICAL SOCIETY.

The thirteenth annual meeting of this society began in Cleveland, Ohio, July 12, 1881, with about 30 members in attendance. The papers and discussions of the first day embraced "Homer and Strabo," by Professor Egrihler, of Johns Hopkins University; "Latin words in the Talmud," by Prof. James S. Blackwell, of the University of Missouri; and "The home of the original Semitic people," by Professor Toy, of Harvard. In the evening Prof. Lewis R. Packard, of Yale College, delivered the annual address. On the second day the following papers were read: "History of the 'A' vowel, from old Germanic to modern English," by Dr. W. Weelsey, of the Johns Hopkins University; "Verses of text respecting the precious stones of Scripture," by Professor Blackwell, of the University of Missouri; "Mixture in language," by Prof. W. D. Whitney, of Yale College; "Language of the Isle of Man," by Mr. W. S. Kerruish, of Cleveland; "The use of abstract verbal nouns in Thucydides," by Dr. E. G. Sihler, of New York; "The vowel scheme of Melville Bell," by Prof. Samuel Porter, of the National Deaf-Mute College, Washington.—(Scientific American.)

## NATIONAL CONFERENCE OF CHARITIES AND CORRECTION.

The eighth national conference of this body was held in Boston July 25–30, 1881, there being present 214 delegates, from 16 States, the District of Columbia, and Canada. The objects aimed at by the society are: (1) to reduce vagrancy and pauperism and ascertain their true causes; (2) to prevent indiscriminate and duplicate giving; (3) to secure the community from imposture; (4) to see that all deserving cases of destitution are properly relieved; (5) to make employment the basis of relief; (6) to elevate the home life, health, and habits of the poor; and (7) to prevent children from growing up as paupers.

The conference met, by invitation of the State authorities, in the representatives' hall of the State House, and was opened by Governor Long, of Massachusetts, in a graceful and felicitous address of welcome. The president of the conference, F. B. Sanborn, esq., of Massachusetts, followed in the customary address, in which he considered "Insanity in its relations to the state." Two days were devoted to questions connected with the work of associated charity societies. A report by Dr. Charles Cadwalader, of Philadelphia, showed the coöperation of societies in 16 cities of the United States and in about 78 cities in Great Britain, reports having been received from 9 European organizations. Robert Treat Paine, jr., president of the society in Boston, gave an account of its workings there, and J. Guilford Smith, esq., secretary of the Buffalo society, gave a history of the work in that city, where, he said, they had virtually put an end to all street begging. Mrs. James T. Fields presented a paper on "The constitution and duties of a district conference," in which she referred to the need of industrial training for the young and the necessity of teaching the poor how to become self supporting. Levi L. Barbour, esq., president of the society in Detroit, followed with a paper on the difference between pauperism and poverty, and the duty of suppressing vagrancy, street begging, and mendicancy; Mr. Seth Low, of the Brooklyn Bureau of Charities, read a paper on

public outdoor relief in the United States; Mr. George A. James, of Boston, gave an account of the "provident wood yard" of that city, an association to provide employment for persons seeking relief; and Mrs. Charles R. Lowell, of the New York State board of charities, read a paper on "The considerations upon a better system of public charities and correction for cities," in which was sketched a carefully considered plan for dividing the charities of every large city into three departments, one for the care of children, one for the care of public dependents, and one for the reduction of crime.

Friday was given to the subject of "Preventive work among children. It was to have been presented by Ex-Governor John J. Bagley, of Michigan, but news of his sudden death reached the conference by telegraph the morning of the day on which he was to speak. His place as chairman for the day was taken by Hon. W. P. Letchworth, of New York, and after a report of local work in this direction in Vermont and Illinois, by Mrs. H. M. Beveridge, of Illinois, Mrs. Elizabeth C. Putnam, of Boston, gave an account of "The work of auxiliary visitors among dependent and delinquent children." These visitors are persons appointed by the State of Massachusetts to visit and care for the minor wards of the State. There are 60 such acting under the authority of the State board of health, lunacy, and charity, who are paid only their travelling expenses. They seek homes for children either in domestic work or by adoption, visit the family of the child and that to whose care it is proposed to confide him or her, keep constantly informed about the circumstances of the child, and report to the board. Mrs. Susan I. Lesley followed in a paper on "Foundlings," and much other interesting matter was presented on the subject of insanity, imbecility, immigration, crime, penalties, hospitals, asylums, and other topics, which may be found in the official report of the conference. After resolutions of sympathy with President and Mrs. Garfield, the conference adjourned to meet the following year in Madison, Wis.—(Monthly Register, Philadelphia.)

## CHAUTAUQUA TEACHERS' RETREAT.

This department of the Chautauqua movement proposes to benefit teachers by combining recreation and conversation on the philosophy of education and the methods by which it may be promoted. Some of the foremost educators of the country are interested in the movement, and a large number of teachers from various parts of the Union received certificates of attendance during the two weeks term of 1880 and of 1879.

The retreat for 1881 was advertised to open July 19 and close August 2. Among the topics on the programme appear psychology and pedagogy, geography, Kindergärten, industrial education, the tonic sol-fa system, elocution, gymnastics, clay modelling, English grammar and literature, and phonography. No further report of the session has been received.—(Teachers' Guide.)

## AMERICAN MISSIONARY ASSOCIATION.

A conference of the officers and workers of this association, which deals largely with education of Indians and freedmen, was held at Fisk University, Nashville, Tenn., December 26–27, 1881, to consider the educational work of the association in the South, with a view to its unity and efficiency. Many of the teachers present had been long in the service, thus bringing to the discussion the qualifications of experience and observation in regard to the educational aptitudes of the colored race. It was considered necessary to provide for them more and better theological instruction; and to this end the association was asked to establish a theological seminary farther south, in addition to the department of Howard University, and to sustain the efficiency of the departments at Talladega College, Alabama, and Straight University, New Orleans, La. The review of the industrial departments was satisfactory. The farms at Tougaloo, Miss., and Talladega, Ala., furnish labor for the boys, and the boarding departments there, as also at Atlanta and Fisk Universities, give employment to the girls. These industrial departments do not pay pecuniarily, but they pay in healthy mental and moral stamina and in preparation for practical pursuits. Much time was given to the discussion of normal and preparatory schools and their relations to higher institutions. The most effective work for the colored race, it was felt, is in the normal and preparatory schools, where the wants of the masses are met and the foundations laid for more advanced study. The results of the conference in this respect are expected to be greater unity and efficiency in object lesson teaching, normal training, and practical business education, as well as in giving more thorough preparation to those who may enter the colleges. The meeting also furnished opportunity for a better acquaintance among officers and teachers of the association and for a more extended knowledge of the various interests in its care. A significant and encouraging fact was the presence of Dr. J. B. Lindsley, secretary of the State board of education of Tennessee, and of State Superintendent Doak, both of whom expressed in the strongest terms their appreciation of the work the association was doing in the South.—(American Missionary.)

## AMERICAN MEDICAL ASSOCIATION.

The thirty-second annual session of this association was held in Richmond, Va., May 3, 1881. The subjects under discussion related mainly to medical practice and not to the elevation of standards in medical colleges or other educational topics. The question of admitting homœopathic students to the courses at regular schools, which has been a burning one for several years, after an animated and eloquent debate, was finally disposed of by a compromise. The homœopath is to be allowed an education, but not a diploma. Dr. J. J. Woodward, Assistant Surgeon-General, Washington, D. C., was chosen president of the association for 1881–'82.

## AMERICAN INSTITUTE OF CHRISTIAN PHILOSOPHY.

This association, starting in 1881, grew from a similar one, the Victoria Institute, in England, whose object is the creation and distribution of literature illustrating the relations between science and religion. As many of its ablest papers were from this side of the Atlantic, it occurred to some of the Christian scholars of America that a similar organization should be attempted in this country.

The attempt was experimental, but largely successful. Rev. Dr. Deems, pastor of the Church of the Strangers, in New York, who had for years been a member of the British Institute, and Rev. Amory H. Bradford, pastor of the Congregational Church of Mont Clair, N. J., made an effort to ascertain whether 10 gentlemen could be found who would deliver a course of lectures in the line of the relations of science and religion. The response was such that a syllabus was made out. William O. McDowell, esq., engaged to build a hall to be used for these lectures on a beautiful property of his called Warwick Woodlands, on the west side of Greenwood Lake, at a railroad terminus 40 miles from New York City; and having secured an encamping hotel he offered to pay the fees and expenses of the lecturers. The course was opened July 12, 1881, with a lecture by Dr. Deems on "The cry of conflict," followed on the 13th by one from President Porter, of Yale College, on "What we mean by Christian philosophy;" on Thursday, the 14th, by Prof. Borden P. Bowne, of Boston University, on "Some difficulties of modern materialism;" on Friday, 15th, by Prof. Stephen Alexander, of Princeton, on the "Origin and primitive state of man;" on Saturday, 16th, by Prof. C. A. Young, of Princeton, on "Astronomical facts for philosophical thinkers." On Sunday a large gathering listened to a sermon from Rev. A. H. Bradford, of Mont Clair, N. J. On Monday, 18th, the course was resumed with a lecture by Prof. Alexander Winchell, of the University of Michigan, on "The philosophical consequences of evolution," followed on Tuesday, 19th, by Rev. Lyman Abbott, D. D., of New York City, on the "Foundations of Christian belief;" on Wednesday, 20th, by Rev. J. H. McIlvaine, of Newark, N. J., on "Science and revelation;" Thursday, 21st, by Prof. B. N. Martin, of the University of New York, on "Recent physical theories in their bearing on teleology;" and lastly, Friday, 22d, by President John Bascom, of the University of Wisconsin, on "The gains and losses of faith by science."

On the 21st of July, while this course was in process, a meeting was held in the hall of philosophy, when the American Institute of Christian Philosophy was organized, a prospectus issued, and Rev. Charles F. Deems, D. D., LL. D., was elected provisional president, Rev. Amory H. Bradford, provisional secretary, and William O. McDowell, provisional treasurer. The first monthly meeting was held at Warwick Woodlands, August 28, 1881, and the following gentlemen were elected vice presidents: John Bascom, LL. D., of Wisconsin; Hon. Kemp P. Battle, LL. D., of North Carolina; Rev. Bishop Charles Edward Cheney, of Illinois; and General G. W. Custis Lee, of Virginia. It was ordered that the future monthly meetings be held in the parlors of the Church of the Strangers, where the second and third monthly meetings were held, at the last of which the committee on by laws reported a system of laws, which was adopted.—(Christian Philosophy Quarterly, 1881.)

## AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

The thirtieth annual meeting of this association met in Cincinnati August 17, 1881. Prof. G. J. Brush, of the Yale Scientific School, in the chair. The venerable retiring president, Hon. Lewis H. Morgan, absent on account of sickness, took leave of the society in a touching letter. The meeting was a most important one, whether viewed in reference to the numbers in attendance, the high standing of the members in their various specialties, or the bearing upon science and real life of the subjects discussed. The topics presented before the several sections were too numerous for special mention here; among them were the following, arranged according to a new schedule adopted at this

meeting: In the section of mathematics and astronomy, "Method of determining the solar parallax from meridian observations of Mars at opposition," by J. R. Eastman, of Washington, D. C.; "Wave lengths of the principal lines of the solar spectrum," by T. C. Mendenhall, of Columbus, Ohio, and a report from a committee of eminent astronomers on new standards of stellar magnitudes; in the section of physics, "Electricity, magnetism, gravitation, considered as manifestations of one force," by S. S. Parsons, Lodi, Ohio; in the section of chemistry in its application to agriculture and the arts, "Coal dust as an element of danger in mining," by H. C. Hovey, of New Haven, Conn.; "Amylose," "Mixed sugars," and the "Composition and quality of American wines" received attention, as well as "The development of sugar in maize and sorghum," the writers on the last two being Henry B. Parsons and Peter Collier, both of Washington, D. C.; in the section of mechanical science, "Suggestions for improvement in the manufacture of glass and new methods for the construction of large telescopic lenses" was presented by G. W. Holley, of Niagara Falls, New York; in the section of geology and geography, came "On the cause of the arid climate of the western portion of the United States" and "The excavation of the grand cañon of the Colorado River," both by Capt. C. E. Dutton, of Washington, D. C., and also "A short study of the features of the region of the lower Great Lakes during the great river age; or, Notes on the origin of the Great Lakes of North America," by J. W. Spencer, of Windsor, Nova Scotia, and "Evidence from the drift of Ohio, Indiana, and Illinois, in support of the preglacial origin of the basins of Lakes Erie and Ontario," by E. W. Claypole, of Yellow Springs, Ohio; in the section of biology, "A contribution to the study of the bacterial organisms commonly found upon exposed mucous surfaces and in the alimentary canal of healthy individuals;" in the section of anthropology, a lengthy and learned paper on "The gesture speech of man," by Col. Garrick Mallery, U. S. A., with another on "A lawgiver of the stone age," by Horatio Hale, of Clinton, Canada, descriptive of the formation by Hiawatha of the great league of the Six Indian Nations of New York.

Before the close of the session, action was taken, with considerable decision, on the practice which it was ascertained was growing up of conferring the degrees of doctor of philosophy and doctor of science honoris causa, instead of as an earned reward for scientific work and high attainments in philosophic study. The revelations made, in the discussion on this point, of the lavish way in which degrees are given went far to show the need of repressive action in other directions than the two specifically referred to.—(Proceedings of the thirtieth meeting, 1881.)

# APPENDIX.

## STATISTICAL TABLES

RELATING TO

# EDUCATION IN THE UNITED STATES.

TABLE I.—PART 1.—*Statistics of the school systems of the States and Territories, showing &c.; from replies to inquiries by the*

| | States and Territories. | Report for the year— | SCHOOL YEAR. Begins— | SCHOOL YEAR. Ends— | SCHOOL POPULATION. Between what ages. | SCHOOL POPULATION. Total number between said ages. |

*o* Amount paid cities and towns only; the total income from this source for 1881 was $138,775.
*p* Exclusive of receipts for school buildings, permanent improvements, and ordinary repairs.
*q* Includes revenue from other funds.
*r* Storey County not reporting these items.
*s* County supervision, expenses of the department, and part pay of teachers' tuition in State normal schools.
*t* Includes income for evening schools.
*u* Salaries of county superintendents only.
*v* 25 counties reporting; it is estimated that a full report would make the total revenue for the year over $500,000.
*w* United States census of 1880.
*x* In 1879.
*y* Total income not reported; amount given is that reported as expenditure, which, it is stated, was derived from tribal funds.

TABLE I.—PART 2.—*Statistics of the school systems of the States*

| | States and Territories. | ANNUAL EXPENDITURE. | | | |
|---|---|---|---|---|---|
| | | Current. | | | |
| | | Salaries of teachers. | Miscellaneous or contingent (includes fuel, light, rent, repairs, &c.). | Total. | Expenditure in the year per capita of the school population.[a] |
| | 1 | 41 | 42 | 43 | 44 |
| 1 | Alabama | $384,769 | [b]$14,037 | $410,690 | $1 06 |
| 2 | Arkansas | ---------- | ---------- | 388,412 | [d]1 32 |
| 3 | California | 2,346,056 | 401,573 | 3,047,605 | 13 15 |
| 4 | Colorado | ---------- | ---------- | 557,151 | 13 65 |
| 5 | Connecticut | 1,025,323 | 299,986 | 1,476,691 | 8 78 |
| 6 | Delaware | [c]138,819 | [c]64,472 | [cg]207,281 | [ch]6 39 |
| 7 | Florida | 97,115 | 3,557 | [j]114,895 | [d]1 30 |

| 36 | Virginia | 823,310 | 94,763 | 1,100,239 | 1 74 |
| 37 | West Virginia | 539,648 | 107,019 | 761,250 | 3 08 |
| 38 | Wisconsin | 1,618,283 | 324,999 | 2,279,103 | 4 68 |
| 39 | Arizona | ---------- | ---------- | 44,628 | ---------- |
| 40 | Dakota | ---------- | ---------- | [bb]314,484 | ---------- |
| 41 | District of Columbia | 295,668 | 100,251 | 527,312 | 9 50 |
| 42 | Idaho | 38,174 | 4,515 | 44,840 | [d]5 69 |
| 43 | Montana | 52,781 | ---------- | 55,781 | 8 91 |
| 44 | New Mexico | [dd]28,002 | [dd]971 | [dd]28,973 | [d]99 |
| 45 | Utah | 113,768 | 30,637 | 199,264 | [d]3 51 |
| 46 | Washington | [e]94,019 | [e]2,885 | [e]114,379 | [e]4 72 |
| 47 | Wyoming | [dd]25,894 | [dd]2,610 | [dd]28,504 | [d]6 93 |
| 48 | Indian: | | | | |
| | Cherokees | ---------- | ---------- | 52,300 | ---------- |
| | Chickasaws | ---------- | ---------- | 33,550 | ---------- |
| | Choctaws | ---------- | ---------- | 31,700 | ---------- |
| | Creeks | ---------- | ---------- | 26,900 | ---------- |
| | Seminoles | ---------- | ---------- | 7,500 | ---------- |

*a* In estimating these items, only the interest on amount expended under the head of "permanent" (i. e., for sites, buildings, furniture, libraries, and apparatus) should be added to the current expenditure for the year.

*b* Includes $13,500 spent for normal schools.

*c* In 1880.

*d* Estimated by Bureau, 6 per cent. being the rate used in casting interest on permanent expenditure.

*e* In 1879.

*f* Per capita of population between 5 and 17.

*g* Includes $1,690 expended for colored schools outside of Wilmington.

*h* Does not include expenditure for books.

*i* For white schools only.

*j* Items not fully reported.

*k* Amount received from the State and from local taxation for the support of public schools; this amount is largely supplemented by patrons.

*l* Includes salaries of all superintendents except those of the counties.

*m* Includes $465,077 principal of bonds and $285,375 interest on bonds.

*n* Exclusive of appropriations for normal schools and expense of State superintendency.

*o* Exclusive of the value of normal school property.

*and Territories, showing the income, expenditure, &c.*—Continued.

| ..... | ..... | ..... | ..... | [ee]200, 000 | ..... | ..... | |
| ..... | ..... | ..... | ..... | ([ff]) | ..... | ..... | |

[p] Total amount expended from tuition revenue.
[q] Includes salaries of superintendents.
[r] Estimated.
[s] The sum included in this total as public school expenditure for colored schools is the amount raised for them and may be somewhat greater or less than the actual expenditure.
[t] An estimate including per capita of total permanent expenditure for the year.
[u] In 1878.
[v] Includes $40,144 for interest and indebtedness extinguished.
[w] Includes fuel and care of school rooms.
[x] Storey County not reporting these items.
[y] Exclusive of the United States deposit fund.
[z] Exclusive of large quantities of swamp lands.
[aa] Includes expenditure for evening schools.
[bb] 25 counties reporting; it is estimated that a full report would make the total expenditure for the year over $500,000.
[cc] Value of school-houses only.
[dd] United States census of 1880.
[ee] The income derived from these funds is augmented from other sources.
[ff] Schools supported from general tribal funds.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for* 1881; *from replies to inquiries by the United States Bureau of Education.*

| | City. | Superintendent. | Total population (census of 1880). | School population. | | | | Number enrolled in public schools. | | | Estimated enrolment in private and parochial schools. | Number of school days in the year. | Number of days the schools were taught. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | Legal school age. | Number under 6 years of age. | Number over 16 years of age. | Total number of legal school age. | Number under 6 years of age. | Number over 16 years of age. | Whole number enrolled, excluding duplicate enrolments. | | | |

* From Report of the Commissioner of Education for 1880.
*a* Estimated.
*b* In primary and grammar schools.
*c* These statistics are from a return for 1880.
*d* In 1879.
*e* For the Portland School for the Deaf.
*f* From semiannual returns to June, 1881.
*g* These are for union schools.
*h* Used also for day schools.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1881, &c.*—Continued.

| | City. | Number of school buildings for— | | | | | | | | Number of sittings for study in— | | | | | | | | Number of teachers in— | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Primary schools. | Grammar schools. | High schools. | City normal schools. | Evening schools. | All public schools. | Private and parochial schools. | All schools, public and private. | Primary schools. | Grammar schools. | High schools. | City normal schools. | Evening schools. | All public schools. | Private and parochial schools. | All schools, public and private. | Primary schools. | | Grammar schools. | | High schools. | |

* From Report of the Commissioner of Education for 1880.
*a* Exclusive of Gold Hill, a separate district.
*b* For ungraded schools.
*c* Number actually occupied.
*d* Exclusive of 300 sittings in a building formerly used for evening schools.
*e* These statistics are for the Kingston school district only.
*f* Number of teachers in corporate schools.
*g* Estimated.
*h* For city and county.

TABLE II.—*School statistics of cities containing* 7,500 *inhabitants and over, for* 1881, *&c.*—Continued.

*From Report of the Commissioner of Education for 1880.
*a* In Portland School for the Deaf.
*b* From semiannual returns to June, 1881.
*c* Includes special teachers.
*d* Average number belonging.
*e* Evening and special schools.
*f* These are in union schools.
*g* For the first term of the school year, ending July 1, 1881.
*h* These statistics are from a return for 1880.
*i* Whole number of pupils in day schools, May 1, 1881.
*j* Average number for eighty nights.
*k* Includes some duplicate enrolments.
*l* Exclusive of Gold Hill, a separate district.
*m* In ungraded schools.
*n* Exclusive of average attendance in evening schools.

* From Report of the Commissioner of Education for 1880.
*a* For libraries and apparatus.
*b* Bonds for building purposes are sold and redeemed by the city council, and no account of them appears in the records of the board of education.
*c* Including Monroe County.
*d* From poll tax and city appropriation.
*e* These figures are for city and county.
*f* Includes a poll tax of $640.
*g* From loans.
*h* From sale of lands.
*i* In 1879.
*j* These statistics are from a return for 1880.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for* 1881, *&c.*—Continued.

| | City. | Total taxable property in the city. | | Tax for school purposes. | | Receipts. | | | | | | | | | Expenditures. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Estimated cash value. | Assessed valuation. | Mills per dollar of cash value. | Mills per dollar of assessed value. | Balance on hand from last school year. | Amount received from interest on permanent fund. | | | Amount received from taxation. | | Amount received from tuition fees. | Amount received from all other sources. | Total receipts. | Permanent. | | |
| | | | | | | | State. | County. | Local. | State. | Local. | | | | Sites and buildings. | Furniture and apparatus. | Libraries. |

* From Report of the Commissioner of Education for 1880.
*a* Appropriation for day schools, 1880.
*b* These statistics are from a return for 1880.
*c* Includes expenditure for repairs.
*d* Expended under the supervision of the committee on public property, and not included in school expenditure.
*e* Estimated.
*f* In 1879.
*g* Exclusive of Gold Hill, a separate district.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1881, &c.*—Continued.

| | City. | Total taxable property in the city. | | Tax for school purposes. | | Receipts. | | | | | | | | | Expenditures. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | | | | Amount received from interest on permanent fund. | | | Amount received from taxation. | | | | | Permanent. | | |
| | | Estimated cash value. | Assessed valuation. | Mills per dollar of cash value. | Mills per dollar of assessed value. | Balance on hand from last school year. | State. | County. | Local. | State. | Local. | Amount received from tuition fees. | Amount received from all other sources. | Total receipts. | Sites and buildings. | Furniture and apparatus. | Libraries. |

* From Report of the Commissioner of Education for 1880.
*a* These statistics are for the Kingston school district only.
*b* In 1879.
*c* Total of items reported.
*d* For city and county.
*e* From sale of bonds.
*f* So reported, though the items given amount to but $393,855.
*g* State appropriation for two years.
*h* For furniture and books.
*i* From State appropriation.
*j* In uncollected taxes, and not, therefore, included in total receipts for 1881.

TABLE II.—*School statistics of cities containing 7,500 inhabitants and over, for 1881, &c.*—Continued.

| | City. | Total taxable property in the city. | | Tax for school purposes. | | Receipts. | | | | | | | | | Expenditures. | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Estimated cash value. | Assessed valuation. | Mills per dollar of cash value. | Mills per dollar of assessed value. | Balance on hand from last school year. | Amount received from interest on permanent fund. | | | Amount received from taxation. | | Amount received from tuition fees. | Amount received from all other sources. | Total receipts. | Permanent. | | |

* From Report of the Commissioner of Education for 1880.

*a* Exclusive of appropriations for permanent objects.

*b* Appropriation in common with other departments of the university (see Table IX).

*c* Of this, $75,000 are a special appropriation for new building.

*d* Special appropriation for new building.

*e* As East Florida Seminary; reorganized as State Normal School in 1880.

*f* School is supported by interest of funds derived from sale of lands donated by the United States.

*g* Of this sum, $6,397 were from the fund donated by Congress for seminary and $1,200 for permanent improvements.

*h* Connected with this school is a Kindergarten normal department, in which there are ten students, under the instruction of Miss Matilda H. Ross.

*i* Includes salary of clerk for county superintendent.

*j* County appropriation per capita.

* From Report of the Commissioner of Education for 1880.

*a* In 1879.

*b* To normal students.

*c* To State pupils; others, $10.

*d* To those pledged to teach in the State.

*e* Connected with this school is a Kindergarten normal department, in which there are ten students, under the instruction of Miss Matilda H. Ross.

*f* To residents of the county; $30 to others.

*g* In schools of the county.

*h* In schools of the city.

*i* Receive diplomas after two years of successful teaching; they are then authorized by law to teach in the schools of the State without further examination.

*j* To residents of the city.

*k* After two years of successful teaching graduates may receive the degree of "bachelor of didactics."

*l* Incidental fee.

*m* To resident regular students; special students $50, and non-resident students $100.

*n* To all who comply with the condition of teaching in the schools of Massachusetts; incidental fee, $4.

*o* Each of the representatives in the State legislature appoints two students free of tuition.

*p* See Table IX.

*q* Matriculation fee.

TABLE III.—PART 1.—*Statistics of public normal schools for* 1881, *&c.*—Continued.

NOTE.—× indicates an affirmative answer; 0 signifies no or none; .... indicates no answer.

| | Name. | Graduates in the last year. | | Number of years in full course of study. | Number of weeks in scholastic year. | Library. | | | Number of educational journals and magazines taken. | Annual charge to each student for tuition. | Is drawing taught? | Has the school a collection of models, casts, apparatus, and examples for free hand drawing? | Is music taught? | | School possesses a chemical laboratory? | School possesses a philosophical cabinet and apparatus? | School possesses a museum of natural history? | School possesses a gymnasium? | Model school attached to the institution? | Students receive diplomas or certificates on completion of course? | Graduates teach in State common schools without further examination? | Time of anniversary. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Whole number. | Number who have engaged in teaching. | | | Number of volumes. | Increase in the last school year. | Number of volumes of pedagogical works. | | | | | Vocal. | Instrumental. | | | | | | | | |

* From Report of the Commissioner of Education for 1880.

*a* No separate report for normal department (see Table IX).

*b* These are academic; there are also 10 instructors in the industrial department.

*c* Normal and theological.

*d* Assisted by 4 pupil teachers.

*e* For all departments.

*f* Organized at Worthington in 1872; removed to Fayette in 1881.

*g* In preparatory and normal departments.

*h* See Table VI.

*i* These also instruct in other departments.

*j* Assisted by other college professors.

*k* This institute was chartered in 1876, and a primary school taught by Mrs. E. M. E. Garland appears to have been opened about that time under this name, but the institute proper was not opened to pupils until January, 1881.

*l* 39 of these are also in the theological department.

TABLE III.—PART 2.—*Statistics of private normal schools for* 1881, *&c.*—Continued.

NOTE.—× indicates an affirmative answer; 0 signifies no or none; .... indicates no answer.

| | Name. | Number of years in full course of study. | Number of weeks in scholastic year. | Library. | | | Number of educational journals and magazines taken. | Annual charge to each student for tuition. | Is drawing taught? | Has the school a collection of models, casts, apparatus, and examples for free hand drawing? | Is music taught? | | School possesses a chemical laboratory? | School possesses a philosophical cabinet and apparatus? | School possesses a museum of natural history? | School possesses a gymnasium? | Model school attached to the institution? | Students receive diplomas or certificates on completion of course? | Graduates teach in State common schools without further examination? | Time of anniversary. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

| 9 | 10 | 11 | 12 | 13 |
| 5 | 36 | Building with blocks, counting with sticks, form laying with tablets, perforating, embroidering, drawing, singing, marching, recitation, writing, and reading. | Gifts used in American Kindergarten and Emily Huntington's kitchen garden apparatus and appliances. | Imparts grace of movement inculcates habits of order, method, and prompt obedience, and leads the child to think, to act, to observe, and compare for himself. |
| 5 | 35 | Stick laying, peas work, sewing, folding, cutting, weaving, drawing, games, songs, writing, and lessons in reading and numbers. | | |
| 5 | 40 | Weaving, drawing, modelling, sewing, folding, cutting, stick laying, peas work, games, songs, instrumental music, and other occupations common to a first class Kindergarten. | Squared tables, chairs, table ware, piano, drums, triangles, tambourines, Prang's pictures for object teaching, and material for teaching the occupations. | It fully realizes the idea of Fröbel that physical and mental work can be made as attractive and exhilarating as play. |
| 5 | 37½ | Weaving, sewing, perforating, block building, drawing, penmanship, numbers, reading, singing, games, general lessons on color, human body, &c. | 3d, 4th, and 5th gifts, staffs, slats, materials for weaving, paper folding, sewing and perforating, books, slates, numeral frame, blackboards, tables, &c. | Develops the physical powers, trains to habits of attention and order, cultivates taste, perception, and use of language, and gives ideas of form, size, and color. |
| 6 | 38 | Fröbel's gifts and occupations. | | |
| 5 | 33 | Weaving, sewing, pricking, building, laying of rings and sticks, drawing, modelling, paper folding, singing, &c. | Fröbel's gifts and materials for the occupations, squared blackboard, colored chalks, piano, and arrangement for the growth of flowers. | Its beneficial effect in the physical development of the child is evident to the most superficial observer, and its agency in the development of the mind is even more marked, awakening as it does the creative faculties, giving clearness of thought, correctness of perception, and laying the foundations for after training. |
| 5 | 38 | Gifts 1st, 2d, 3d, 4th, 5th, 6th, 7th, sticks, rings, drawing, perforating, sewing, weaving, paper folding, interlacing slats, connected slats, twining paper, cutting and pasting paper, peas work, modelling, movement songs and games. | All of Fröbel's gifts and materials for the occupations, piano, Kindergarten furniture of the best kind, beautiful sunshiny rooms, and much that cultivates a love for the good, the true, the beautiful. | Superior preparation for the public school. |
| 5 | 36 | Fröbel's occupations and gifts. | Fröbel's gifts, &c ..... | Increases activity and ability in the child for systematic work and thought, and cultivates his powers of observation. |
| 5 | 40 | Building, weaving, working with tablets, the use of colors in various ways, designing and drawing with papers, rings, and sticks, pricking, embroidering, and modelling in clay. | All apparatus and appliances necessary for the mentioned occupations. | The child's body is developed by the games played, morals are taught, and the mental training lays the foundation for a systematic, scientific education, which will help him to become an expert and artistic workman in any occupation in which he may be engaged. |
| 5 | 36 | Drawing, sewing, weaving, folding, paper cutting, modelling, building, stick laying, &c. | Building blocks, balls, and materials for the occupations. | Beneficial to the health, mind, and character of the child. |
| 5 | 28 | Fröbel's occupations..... | Fröbel's gifts and materials for occupations. | Healthful. |
| .... | .... | | | |

a Under 10.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| .... | .... | | | |
| .... | .... | Those occupations which tend to awaken and exercise the powers of observation, comparison, combination, invention, memory, reflection, and action. | All means and appliances necessary to the carrying out of this method of instruction. | Most beneficent; no training of primary classes of blind children can attain a high degree of efficiency without its assistance. |
| 5 | 40 | Usual Kindergarten occupations. | All necessary material..... | It strengthens physically and makes the child observant and intelligent. |
| 5 | 36 | Fröbel's gifts in their proper sequence and the regular occupations, giving point, line, surface, and solid. | All necessary apparatus and appliances as given in Bradley's catalogue of Kindergarten materials. | The effect on the physical, mental, and moral nature is good. |
| 5 | 36 | Regular Kindergarten occupations, with elementary instruction for the more advanced. | | |
| 5 | 40 | Pricking, sewing, weaving, drawing, modelling, block building, object lessons, number lessons, paper folding, marching, singing, games, &c. | Squared tables, small chairs, boxes of wooden cubes, sticks, steel rings, slates, and drawing books, patchwork, cardboard, &c. | Promotes bodily and mental growth, teaches the child self control, and develops in him an ability to think and act for himself. |
| 5 | 37 | Weaving, sewing, drawing, modelling, bead stringing, paper folding, designing, pasting papers and straw, block building, calisthenics, and games. | Squared tables, chairs, squared slates, geometrical forms, rings, sticks, blackboard, materials for designing, paper folding, weaving, sewing, and drawing, straws, and beads. | Trains the different members of the body, quickens the perceptive faculties, strengthens the memory, and teaches the child patience, perseverance, and self government. |
| 5 | 41 | Weaving, sewing, modelling, block building, singing, straw and bead work. | Blocks, squared tables, and usual materials used in Kindergärten for the occupations. | Kindergarten children are better fitted for higher school work than those otherwise taught. |
| 5 | 42 | Lessons in color and numbers. | ..... | Teaches the child to think quickly and lays a good foundation for future school work. |
| 5 | 43 | Sewing, pricking, weaving, drawing, cutting, folding, building, staff laying, modelling, &c. | All Fröbel's gifts, plants, Kindergarten tables, chairs, blackboards, drawing books, clay, mats, &c. | Develops habits of observation and attention and quickens the perceptive faculties. |
| 5 | 40 | Sewing, weaving, drawing, stick laying, ring laying, painting, singing, paper folding, pricking, object lessons, modelling in clay, &c. | Kindergarten tables and chairs, squared blackboard, 1st, 2d, 3d, and 4th gifts, weaving mats, sewing cards, planes, colored paper, counters, &c. | Improves the physical condition, makes the child bright, happy, and intelligent and thoughtful and considerate for others. |
| 5 | 40 | Sewing, weaving, pricking, paper folding, drawing, painting, paper cutting, block building, parquetry, modelling, stick and ring laying. | Chairs, tables, squared blackboards, all materials for the occupations, wooden beads, 1st, 2d, 3d, 4th, 7th, 8th, and 9th gifts, sponges, towels, handkerchiefs, &c. | Develops healthy, happy natures, increases the vitality, makes the mind receptive, the hand skilful, and greatly facilitates the ease with which the child advances in school work. |
| 5 | 40 | The usual Kindergarten occupations, with reading, writing, arithmetic, and spelling for children over five and a half years of age. | Usual materials..... | Develops the child's physical nature and renders the mental faculties active and receptive. |
| 5 | 40 | The usual Kindergarten occupations. | Usual Kindergarten apparatus. | Satisfactory in its effect upon the physical and mental natures, and especially beneficial in its development of the moral being. |
| 5 | 38 | Regular Kindergarten occupations. | All necessary apparatus for the work. | |

*a* This return is for the year ending June, 1881, since which time Miss M. Florence Taft has removed to Newport, R. I.

| 5½ | 46 | Fröbel's occupations and gifts | All usual Kindergarten material. | Very beneficial. |
| 5 | 48 | Fröbel's occupations..... | Fröbel's gifts ..... | Beneficial in every respect. |
| 5 | 44 | Drawing, building, and all the occupations pertaining to the system. | All the appliances necessary for carrying on a true Kindergarten. | Very favorable. |
| 5 | 40 | Kindergarten occupations, lessons with the gifts, games, and walks. | Fröbel's Kindergarten gifts and materials for the occupations, Prang's chromos for object teaching, stuffed birds, piano, and wooden bricks. | Excellent in its effect on the health and satisfactory as a humanizing method of training. |
| 5 | 40 | Weaving, perforating, sewing, drawing, painting, paper cutting, folding, and intertwining, slat work, peas work, modelling, gymnastics, and lessons on the various gifts. | The various gifts, blackboard, and slates. | Promotes good health, and the mental development is very satisfactory. |
| 5 | 40 | Ball games, block building, drawing, stick laying, weaving, paper folding, cutting, and pasting, painting, peas work, modelling, and lessons with tablets. | Balls, blocks, slates, sticks, mats, slats, peas, rings, clay, seeds, paints, crayons, scissors, and paste. | Teaches the child to recognize and to respect the rights of others, to be courteous and kind to his elders, makes him thoughtful about the most common objects, thus increasing his own powers of happiness and usefulness to others. |
| 5 | 39 | Lessons and occupations of the Fröbel system. | Fröbel's gifts, gymnastic apparatus, piano, plants, &c. | Children trained in the Kindergarten advance more rapidly and show more power of observation and concentration than older children otherwise trained. |
| 5 | 40 | Pricking, weaving, sewing, modelling, stick and ring laying, and the other occupations of Fröbel's system. | All the gifts and materials for the occupations, tables, chairs, birds, flowers, &c. | Superior to any other system for educating young children, making them healthy and happy, anxious to do well, and eager in the acquisition of knowledge. |
| 5 | 40 | All the usual occupations, weaving, sewing, &c., with object lessons and lessons in reading. | Squared tables and chairs, blocks, material for folding, weaving, &c. | Marked improvement; it trains the hand and eye and leads the child to observe and think for himself. |
| 5 | 52 | Paper folding and weaving, peas and wire work, drawing, perforating, embroidering, modelling in clay and wax, movement plays, gymnastics, and dancing. | Six worsted balls, sphere, cubes, and cylinder, wire, peas, cork, paper, slats, clay, and wax. | Develops physically and mentally, and renders the child graceful and polite. |
| 5 | 40 | Perforating, weaving, sewing, paper folding, cutting, and pasting, modelling, drawing, &c. | Gifts required to carry on the Kindergarten according to Fröbel's method, and materials for the occupations. | |
| 5 | 42 | Fröbel's occupations, gymnastics, games, songs, stories, and object lessons. | Fröbel's gifts, appliances for calisthenics, &c. | Healthy, harmonious development; it teaches combination of knowing with doing. |
| 5 | 38 | Fröbel's occupations, gymnastic games, garden work, songs, stories, care of seeds, plants, and domestic animals, &c. | Fröbel's gifts, and material for the occupations, plants, a museum, cabinet, &c. | Harmonious development of all the powers; it teaches combination of knowing with doing, this idea being carried through all grades. |

* From Report of the Commissioner of Education for 1880.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 38 | Weaving, modelling, pasting, perforating, outlining, drawing, cutting, classifying, designing in paper and crayons, &c. | Reading charts, and charts to teach form and color, and to illustrate the three natural kingdoms, Kindergarten tables and chairs, books, papers, boxes of forms, &c. | Natural and harmonious development of the physical and mental powers. |
| 5 | 38 | Fröbel's occupations..... | Room built expressly for the purpose, squared tables, Kindergarten chairs, piano, diagrams of animals, colors, &c. | Develops the child in all directions, tending to make strong minds in strong bodies. |
| 5 | 40 | Perforating, drawing, painting, sewing, paper intertwining, free weaving, mat weaving, mounting, paper folding, peas work, modelling, and pasteboard work. | Balls, 2d, 3d, 4th, 5th, 6th, and 7th gifts, tablets, connected and disconnected slats, sticks, &c. | Acknowledged by parents and physicians to be of great value, as it strengthens the muscles, tends to counteract nervousness, trains the sense of sight and of hearing, concentrates thought, and develops the power of speech. |
| 5 | 46 | Fröbel's occupations..... | Fröbel's gifts, gardening tools, toys, &c. | Physical, mental, and moral development. |
| 6½ | 40 | The ordinary Kindergarten occupations and object lessons in botany, natural history, and mineralogy. | The usual Kindergarten materials, pictures, slates, globes, maps, pencils, thread, scissors, &c. | Awakens interest in surrounding objects and a desire for knowledge, which is unusual in deaf-mute children, thus proving it a superior method to the old, in which they resisted instruction. |
| 5 | 40 | All Fröbel's occupations .... | All the apparatus and appliances usually found in a genuine Fröbel Kindergarten. | Healthy, natural, and harmonious development of the threefold nature of the child. |
| 5 | 40 | 1st to 11th gifts inclusive, perforating, sewing, mat plaiting, drawing, paper interlacing, folding and cutting, peas work, and modelling. | Kindergarten material, tables, chairs, blackboards, &c. | Strengthens the body, imparts grace of motion, gives command of language, quickens powers of perception and comparison, and carefully nurtures the moral nature. |
| 5 | 48 | Usual occupations ..... | All material necessary for the occupations. | Beneficial in every respect. |
| 5 | 45 | Weaving, pricking, stick and ring laying, and calisthenics. | ..... | Very satisfactory. |
| 5 | 44 | Fröbel's occupations, gymnastics, games, songs, stories, garden work, &c. | Fröbel's gifts, plants, animals, &c. | |
| 5 | 36 | Paper folding, tissue paper work, sewing, tracing, weaving, &c. | Tables, chairs, blocks, &c .. | Teaches method and neatness, and develops thought and originality. |
| ---- | ---- | Usual occupations, with study of reading, spelling, arithmetic, &c., according to Kindergarten methods. | Desks, chairs, charts, &c. | |
| 5 | 40 | Exercises in color and form, collection of specimens of various kinds, reading, writing, arithmetic, singing, calisthenics, &c. | All American Kindergarten material, charts, &c. | Very good. |
| ---- | ---- | | | |
| 5 | 40 | Pricking, sewing, drawing, folding, cutting, weaving, peas work, and exercises with blocks, sticks, triangles, squares, &c. | Those recommended by Fröbel. | Most excellent. |

* From Report of the Commissioner of Education for 1880.
*a* Closed in the fall of 1881.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 44 | All of Fröbel's occupations... | Tables, chairs, piano, all of Fröbel's gifts, drums, &c. | Very encouraging. |
| 5 | 38 | The usual gifts and occupations of Fröbel. | The necessary material for occupations and gift lessons, plants, piano, blackboard, pictures, small chairs, and low tables. | Harmonious development of the physical, mental, and moral natures. |
| 5 | 46 | Pricking, sewing, paper folding, paper cutting, weaving, drawing, and modelling. | All of Fröbel's gifts, slates, pencils, and books for preserving the work. | Habits of order, neatness, diligence, perseverance, patience, and kindness are formed, and the child becomes more thoughtful, quiet, and gentle. |
| 5 | 40 | Lessons with Fröbel's third and fourth gifts, weaving, sewing, stick and ring laying, modelling, paper folding, singing, object lessons, &c. | Chairs, squared tables, blocks, rings, balls, a cabinet, pictures, flowers, &c. | Very beneficial to physical development, being highly recommended by physicians; also induces thought and general mental growth. |
| 5 | 36 | Weaving, pricking, sewing, folding, pasting, drawing, peas work, and modelling. | Soft balls, ball, cube, and cylinder, cubical blocks, and other gifts, squared tables, and chairs. | The physical training is of great value, all the muscles of the body being brought into action, and the mental powers are gradually awakened, without injury to the young mind. |
| 5 | 40 | Games, use of geometrical forms, clay modelling, &c. | Spheres, cubes, and other solid forms, clay, tools for modelling, &c. | Trains the hand, gives ease in movements of the body, makes the child quick to think, and on the alert for impressions; and imparts to him a knowledge of many common things which he could not otherwise gain. |
| 5 | 44 | Object lessons, embracing the three kingdoms of nature, lessons in color and form, physical exercise, and mechanical work illustrating knowledge acquired. | Charts, geometrical forms, clay materials for mixing color, drawing and weaving, dictation books and cards. | |
| 5 | 40 | Pricking, sewing, weaving, folding, cutting, pasting, stick laying, modelling, and the first four gifts. | Chairs, tables, and all necessary apparatus. | Strengthens the body, awakens the powers of the mind, cultivating especially habits of observation and attention, and promoting harmonious development of the senses. |
| 5 | 40 | Weaving, sewing, stick, tablet and ring laying, modelling, drawing, paper folding, first four gifts, conversational lessons, gardening, peas work, perforating, singing, physical exercises, games, &c. | All of Fröbel's Kindergarten material, squared tables, low chairs, blackboard, piano, stuffed birds, minerals, pictures, plants, musical triangle, aquarium, color chart, &c. | Most beneficial in every way, strengthening and developing without forcing. |
| 3 | 44 | Study of natural history and botany without books, lessons in form and color, drawing, weaving, sewing, block building, counting, staff laying, modelling, games, marching, and singing. | Tables, chairs, clay, balls, cubes, oblongs, squares, triangles, staves, slates, pencils, weaving mats, needles, cards, paper, and rings. | Children become strong and active, orderly and observing; they learn to love useful work, to be kind to one another, and to strive to do that which is right. |

| 261 | Sheboygan Kindergarten. | Sheboygan, Wis. (cor. Seventh street and New York avenue). | 1874 | Miss Annie Zaegel.... | .... | 20 | 3–7 | 5 |

*From Report of the Commissioner of Education for 1880.

*inquiries by the United States Bureau of Education* — Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| .... | .... | The usual occupations, with singing and calisthenic exercises. | All necessary articles for Kindergarten instruction. | Culture of the physical, mental, and moral natures. |
| 5 | 42 | Devotional exercises, singing, motion songs, calisthenics, object lessons, gardening, marching, playing, writing, drawing, and short lessons from books. | Blackboards, cards, letters, blocks, sticks, balls, pictures, maps, charts, numeral frames, museum, gymnasium, ropes, swings, large box of sand, and a garden with tools for each child. | Promotes physical health, imparts dexterity to the hand, cultivates thought and the reasoning faculties, makes the child kind, unselfish, and truthful, and develops a love for God and humanity. |
| 5 | 36 | Weaving, designing, and pasting, designing and painting, drawing, perforating, stick and ring laying, lessons with blocks, modelling, peas work, and embroidering. | Cabinet of curiosities, and specimens from the three kingdoms of nature. | Strengthens the body and the mind. The method is wonderful in its results, producing deep and lasting impressions without overstimulating the young mind. |
| 6 | 44 | All occupations of Fröbel's system, with instruction in German. | Fröbel's materials ..... | Results most favorable on both mind and body. |
| 6 | 52 | Weaving, block building, drawing, paper folding, singing, marching, gymnastics, and exercises in declamation. | ..... | Physical development. |
| 5 | 50 | The usual occupations with the different gifts, calisthenics, declaiming, and singing. | Colored balls, geometrical solids, tablets, sticks, slates, materials for perforating and embroidering, split wood, straw, clay, primers, blackboards, &c. | Imparts health and grace to the body, cultivates the reasoning and observing faculties, develops a sense of beauty in form, color, and sound, and trains the child to habits of order, punctuality, obedience, kindness, and self-control. |
| 6 | 42 | Fröbel's occupations ..... | The usual apparatus and appliances. | Satisfactory in every respect. |
| 5 | 40 | The usual occupations..... | Usual appliances. | |
| 5 | 38 | All taught in the Fröbel system. | All the gifts, blackboard, piano, and rubber balls. | |
| 5 | 40 | Work with gifts and occupations, games, singing, and lunch. | Fröbel's gifts and material for the occupations, table cloths, dishes, towels, tables, chairs, drums, triangle, and piano. | Excellent. Its superiority to other methods is very manifest. |
| 5 | 48 | Drawing, weaving, sewing, perforating, paper folding, cutting, and mounting, tablet, slat, and stick laying, block building, gymnastics, singing, marching, and plays accompanied with music. | Balls, blocks, slates, peas, wax, clay, charts, blackboard, plants, pictures, gymnastic apparatus, and piano. | Develops a love for order, freedom, and justice, and creates a desire for books and school. |
| 5 | 40 | Modelling and board work, peas work, paper folding, intertwining, cutting and pasting, weaving, sewing, and pricking. | 1st gift, worsted balls; 2d, ball, cube, and cylinder; 3d, 4th, 5th, and 6th, divided cubes; 7th, square and triangular tablets; 8th, connected slats; 9th, interlacing slats. 10th, sticks, squared blackboard, and slates. | Most visible improvement in the moral nature. It tends to counteract peevishness and restlessness and to make the child polite and kind. |
| 5 | 50 | The occupations belonging to Fröbel's system. | Balls, sphere, cube, and cylinder, building blocks, tablets, slats, sticks, rings, and materials for pricking, embroidering, drawing, weaving, interlacing, peas work, and paper folding. | Improves the health and develops the mind, especially the memory. |

| 273 | National Kindergarten and Primary School. | Washington, D. C. (929 Eighth street northwest). | 1874 | Mrs. Louise Pollock... | 2 | 30 | 3–10 | 3, 5 |

* From Report of the Commissioner of Education for 1880.

*inquiries by the United States Bureau of Education*—Continued.

| Number of school days in the week. | Number of weeks in the year. | Occupations of pupils. | Apparatus and appliances. | Effect of the system. |
|---|---|---|---|---|
| 9 | 10 | 11 | 12 | 13 |
| 5 | 40 | Singing, twisting, braiding, &c. | ..... | Very satisfactory. |
| 5 | 40 | Sewing, pricking, weaving, pasting, modelling, folding, cutting, and gardening. | All the gifts, papers, and books belonging to the system. | It makes the child graceful, easy, and polite in his manners, quickens the intellect, especially developing the powers of observation and expression, and its moral effect is incalculable. |
| 5 | 40 | Fröbel's occupations and lessons, with the gifts. physical exercises, games, singing, object lessons, and drawing. | Fröbel's gifts and materials and usual Kindergarten furniture and apparatus. | Promotes physical and mental development in a pleasant and effective manner, and forms a thorough preparation for primary classes. |
| 5 | 40 | Block building, stick laying, weaving, sewing, peas work, perforating, drawing, &c. | The different gifts and a blackboard. | Good. |
| 5 | 40 | Weaving, perforating, peas work, 3d and 4th gifts, tablet and ring laying, paper folding, sewing, &c. | ..... | Wonderful; changing in a short time those who have never known rule or guidance to orderly children. |
| 5 | 40 | The 20 Fröbel gifts and occupations. | Usual gifts and appliances of a true Kindergarten, airy rooms, play ground, piano for older pupils, dumb bells, maps, charts, blackboards, globes, &c. | Improves the physical condition, awakens and expands the mental faculties, teaches the child to be systematic, thoughtful of others, self-dependent, and polite, and lays a valuable foundation for later school work. |
| 5 | 40 | Usual Kindergarten occupations. | Everything necessary for thorough training in the system. | Decidedly advantageous. |
| 5 | 40 | Weaving, paper folding, sewing, paper cutting and twisting, perforating, drawing, modelling, and peas work. | 3d, 4th, 5th, and 6th gifts, tablets, slats, sticks, rings, materials for weaving and perforating, squared tables, slates, and blackboards. | Very beneficial to both body and mind. |
| 5 | 40 | | | |
| 5 | 38 | Object lessons, plays, games, songs, and elementary instruction. | Fröbel's gifts ..... | Develops the muscular system, improves the health, quickens the perception, and arouses the mind to activity. |
| ..... | 40 | All Kindergarten gifts and occupations. | Material for the different gifts and occupations, squared tables, blackboard, slates, dumb-bells, wands, globes, maps, pictures, &c. | It appeals at once to the mental and moral faculties of the child, making him familiar with the forms of usefulness and beauty around him, and cultivating in him a desire to investigate and create the same. |
| 5 | 40 | All the Fröbel occupations except pricking and pasting. | Squared tables, slates, and blackboards, all the gifts, including balls, blocks, tablets, staffs, sticks, rings, and materials for the occupations. | Improved physical and nervous condition, habits of attention, observation and thoughtfulness, of sociability, kindness, and cheerfulness; it is also a superior preparation for subsequent mathematical training. |

* From Report of the Commissioner of Education for 1880.
*a* Includes board.
*b* Value of buildings.
*c* Average charge.
*d* Includes value of the convent building.
*e* Tuition and incidental fees.
*f* In 1879.
*g* Income from all sources.
*h* Return is for the year ending July 1, 1881, at which time the school was closed.
*i* Value of apparatus.
*j* This institute is identical with the Georgetown Collegiate Institute reported in 1880, and the figures here given are for that year.
*k* Appropriated for the year.
*l* Income from "New West Education Commission."
*m* These statistics are from a return for the year 1880.
*n* Value of grounds and buildings.
*o* The figures here given are for the year ending June 24, 1881, up to which time the school was known as "St. Mark's School for Girls."
*p* The figures here given are for the year ending June 24, 1881, up to which time the school was known as "St. Mark's Grammar School."
*q* $1,500 income from other sources.

TABLE VI.—*Statistics of institutions for secondary instruction for* 1881, *&c.*—Continued.

NOTE.— × indicates an affirmative answer; 0 signifies no or none; .... indicates no answer.

| | Name. | Is drawing taught? | | Is music taught? | | Chemical laboratory. | Philosophical cabinet and apparatus. | Library. | | Annual charge to each student for tuition. | Property, income, &c. | | | | Number of weeks in scholastic year. | Scholastic year begins— |

* From Report of the Commissioner of Education for 1880.

*a* For scientific or liberal course.

*b* English and special students.

*c* See report of Colgate Academy (Table VII).

*d* As a free academy; in 1866 as a college.

*e* These are in commercial course.

*f* Catalogue 1881-'82 gives Rev. John Hall, D. D., chancellor ad interim.

*g* As an academy in 1858.

*h* Total for all departments.

*i* Includes students preparing for philosophical course.

*j* As Baldwin University; founded in 1845 as Baldwin Institute.

*k* Since succeeded by Rev. Walter Q. Scott, A. M.

*l* See Table X, Part I.

*m* Preparing for philosophical course.

*n* These statistics are for the year ending June, 1881; since that time steps have been taken towards the removal of Western Reserve College to Cleveland, Ohio, name to be changed to Adelbert College of Western Reserve University.

*o* Preparatory and normal.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

* From Report of Commissioner of Education for 1880.

*a* Preparing for literary course.

*b* Reported in 1880 as suspended; reorganized in the autumn of 1881.

*c* Suspended for a short time; figures are for 1880.

*d* Includes students preparing for other courses.

*e* These are in elementary studies.

*f* See report of University Academy (Table VII).

*g* Date of charter and organization of Jefferson College; Washington College was chartered and organized in 1806, and the two institutions were united in 1865.

*h* Since succeeded by Rev. James D Moffat, D. D.

*i* Suspended for several years; the South Carolina College of Agriculture and the Mechanic Arts was organized October, 1880, in the buildings of the university (see Table X, Part 1).

*j* Institution undergoing reorganization; figures are for 1880.

*k* The female department is at Sweetwater, seven miles from Hiwassee College.

* From Report of the Commissioner of Education for 1880.
*a* Total for all departments.
*b* Under classical are included students in scientific course.
*c* Whole number of students in college classes proper.
*d* See Table X, Part 1.
*e* For students in scientific department, see Table X, Part 1.
*f* In 1879.
*g* There were also 25 non-resident students pursuing the non-resident course of study.
*h* Includes some students in philosophical course.
*i* These statistics are for the year 1880.
*j* Includes students in other collegiate courses.
*k* Includes one only partially endowed.
*l* These are graduates of the year 1881.
*m* Preparatory department only in operation.

* From Report of the Commissioner of Education for 1880.
*a* These are normal students.
*b* Total for all departments.
*c* Also five partially endowed.
*d* Includes students in other collegiate courses.
*e* Under classical are included students in scientific course.
*f* These statistics are for the year 1880.
*g* Not prescribed.
*h* Three are only partially endowed.
*i* Total enrolment, including fellows.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

* From Report of the Commissioner of Education for 1880.

*a* Includes holders of fellowships.

*b* For students in scientific department, see Table X, Part 2.

*c* Includes unmatriculated students and candidates for higher degrees.

*d* Also several partially endowed.

*e* Includes students in other collegiate courses.

*f* Suspended for several years; Baldwin School, the preparatory department, was reopened September, 1880.

*g* Not prescribed.

*h* Total for all departments.

*i* Fund of $30,000 to aid needy youth of Boone County.

*j* These statistics are for the year 1880.

*k* Includes report of O'Fallon Polytechnic Institute.

*l* Preparatory department only organized.

*m* Also 6 partially endowed.

*n* Three are only partially endowed.

*o* For students in scientific department, see Table X, Part 1.

*p* Under classical are included students in scientific course.

*q* Of these 63 are in classical, 43 in scientific, 47 in liberal, 12 in commercial, and 5 in graduate course.

*r* Also an "aid fund" of $25,000.

*s* For students in School of Mines, see Table X, Part 2.

*t* Seven only endowed; there are 30 free students not on scholarships.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Collegiate department. | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Corps of instruction. | | | | Whole number of students. | Students in classical course. | | | | | | | | Students in scientific course. | | | | | | | | Special or optional students. | No. of graduate students. | No. of fellowships. | No. of scholarships. | No. of years in collegiate course. | No. of weeks in scholastic year. |
| | | No. of faculty. | No. of resident professors and instructors. | No. of non-resident professors and lecturers. | No. of endowed professorships. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | | | | | | |

* From Report of the Commissioner of Education for 1880.

*a* Students from 1878 to 1880.

*b* Under classical are included students in scientific course.

*c* Includes students in other collegiate courses.

*d* Total for all departments.

*e* Not prescribed.

*f* See Table X, Part 1.

*g* These statistics are for the year ending June, 1881; since that time steps have been taken towards the removal of Western Reserve College to Cleveland, Ohio, name to be changed to Adelbert College of Western Reserve University.

*h* These are in literary course.

*i* Reported in 1880 as suspended; reorganized in the autumn of 1881.

*j* There are about 1,000 scholarships owned by members of the Reformed Church, which can be had by students of Heidelberg at $40 for three years, or $50 for four years.

*k* Suspended for a short time; figures are for 1880.

*l* All students on scholarships.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Collegiate department. | | | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Corps of instruction. | | | | Whole number of students. | Students in classical course. | | | | | | | | Students in scientific course. | | | | | | | | Special or optional students. | No. of graduate students. | No. of fellowships. | No. of scholarships. | No. of years in collegiate course. | No. of weeks in scholastic year. |
| | | | | | | | Freshman. | | Sophomore. | | Junior. | | Senior. | | Freshman. | | Sophomore. | | Junior. | | Senior. | | | | | | | |
| | | No. of faculty. | No. of resident professors and instructors. | No. of non-resident professors and instructors. | No. of endowed professorships. | | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | Male. | Female. | | | | | | |

* From Report of the Commissioner of Education for 1880.

*a* For students in scientific department, see Table X, Part 2.

*b* Under classical are included students in scientific course.

*c* Includes students in other collegiate courses.

*d* School of Engineering and Chemistry opened this year with 42 students, of whom 19 are also in college classes.

*e* Partially endowed.

*f* Suspended for several years; the South Carolina College of Agriculture and the Mechanic Arts was organized October, 1880, in the buildings of the university (see Table X, Part 1).

*g* Institution undergoing reorganization; figures are for 1880.

*h* Total for all departments.

*i* Not prescribed.

*j* In ladies' course.

*k* These statistics are for the year 1880.

*l* For students in scientific department, see Table X, Part 1.

*m* Curriculum consists of elective schools or departments.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

NOTE.—For statistics of the professional schools or departments connected with any of these institutions, reference is made to the appropriate tables.

| | Name. | Collegiate department. | | | | | | | | | | | | | | | | | | | | | | | | |

* From Report of the Commissioner of Education for 1880.
*a* Curriculum consists of elective schools or departments.
*b* Under classical are included students in scientific course.
*c* Total for all departments.
*d* College is for the present virtually suspended; figures are for 1880.
*e* Includes students in other collegiate courses.
*f* 5 are partially endowed.
*g* These are permanently endowed; besides these there are 50 single scholarships.

* From Report of the Commissioner of Education for 1880.
*a* In 1879.
*b* Board and tuition.
*c* Tuition and contingent fees.
*d* Exclusive of preparatory.
*e* From students' fees.
*f* Value of grounds and buildings.
*g* Annual; depreciated in 1881 to $6,700.
*h* Average charge.
*i* To residents; $50 to non-residents.
*j* In 1876.
*k* Value of assets of the university independent of property held by trustees of the Rich estate and that received from New England Female Medical College.
*l* Estimated.
*m* Libraries of observatory, herbarium, Peabody Museum, and museum of comparative zoölogy.
*n* For all departments of the university, the college funds alone being $1,106,294.
*o* College receipts from all sources.
*p* Entrance fee $10 and annual tax $20 to residents of Michigan; to others, $20 and $25.
*q* Including all departments.
*r* Incidental fees.
*s* Unproductive at present, except $1,000.

* From Report of the Commissioner of Education for 1880.
*a* Suspended for several years; Baldwin School, the preparatory department, was reopened September, 1880.
*b* Incidental fees.
*c* Board and tuition.
*d* In 1879.
*e* Also 275,000 acres of agricultural college lands, valued at $1.25 to $10 per acre.
*f* These statistics are for the year 1880.
*g* In 1878.
*h* Preparatory department only organized.
*i* Average charge.
*j* Proceeds of fund from sale of land given many years ago.
*k* Includes receipts from farm and garden.
*l* Includes income from other sources.
*m* Includes room rent, &c.
*n* Value of grounds and buildings.
*o* Income from city.
*p* Value of productive estate.
*q* Includes amount from rents.
*r* From incidental and other fees.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

| | Name. | Annual charge to each student for tuition. | Cost of board a week. | Libraries. | | | | Property, income, &c. | | | | | | Date of next commencement. |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | | College library. | | | Number of volumes in society libraries. | Value of grounds, buildings, and apparatus. | Amount of productive funds. | Income from productive funds. | Receipts for the last year from tuition fees. | Receipts for the last year from State appropriation. | Aggregate amount of scholarship funds. | |
| | | | | Number of volumes. | Number of pamphlets. | Increase in the last collegiate year in books. | | | | | | | | |

* From Report of the Commissioner of Education for 1880.
*a* $3 incidental fee.
*b* In 1879.
*c* To residents.
*d* Report of public library, which is also the library of the university.
*e* Income from all sources.
*f* See Table X, Part 1.
*g* These statistics are for the year ending June, 1881; since that time steps have been taken towards the removal of Western Reserve College to Cleveland, Ohio, name to be changed to Adelbert College of Western Reserve University.
*h* Income from all sources other than tuition.
*i* Includes incidentals.
*j* Reported in 1880 as suspended; reorganized in the autumn of 1881.
*k* Income from all sources.
*l* Whole endowment.
*m* Suspended for a short time; figures are for 1880.
*n* Board and tuition.
*o* Library of college and private libraries of faculty.
*p* In 1878.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

| | Name. | Annual charge to each student for tuition. | Cost of board a week. | Libraries. | | | | Property, income, &c. | | | | | | Date of next commencement. |

* From Report of the Commissioner of Education for 1880.
*a* Board and tuition.
*b* Church contributions and rents of scholarships.
*c* In 1879.
*d* In 1878.
*e* From contingent fees.
*f* Suspended for several years; the South Carolina College of Agriculture and the Mechanic Arts was organized October, 1880, in the buildings of the university (see Table X, Part 1).
*g* Institution undergoing reorganization; figures are for 1880.
*h* From rents.
*i* Average charge.
*j* These statistics are for the year 1880.
*k* Exclusive of agricultural college funds.
*l* Income from agricultural college fund.
*m* Partly from tuition and room rent.
*n* Includes an annuity of $3,500.
*o* In lands.
*p* Also, $1,200 per annum pledged by individuals for five years to support a new professorship.
*q* College is, for the present, virtually suspended; figures are for 1880.

TABLE IX.—*Statistics of universities and colleges for* 1881, *&c.*—Continued.

* From Report of the Commissioner of Education for 1880.

*a* Reported with classical department (see Table IX).

*b* Since succeeded by William T. Reid, A. M.

*c* Location not fixed, and college not organized at last report, 1880.

*d* For all departments.

*e* As a department of Kentucky University; new charter in 1880.

*f* Includes 39 students in School of Mechanic Arts and 49 in Lowell School of Practical Design.

*g* Includes students in military science and tactics.

*h* Only department organized as yet; statistics reported in Table IX.

TABLE X.—PART 1.—*Statistics of schools of science (mining, engineering, agriculture, &c.) endowed with the national land grant, for* 1881, *&c.*—Continued.

* From Report of the Commissioner of Education for 1880.

*a* 350 beneficiaries, 237 normal students, 1 honorary appointment from each of the 74 counties and 60 from the State at large.

*b* Free in all departments of the university proper; students in preparatory department without normal or beneficiary appointment pay $30 per annum, and all students pay $5 matriculation fee.

*c* Reported with classical department (see Table IX).

*d* To residents of State.

*e* Endowment is the congressional grant to agricultural colleges, amounting, in Colorado, to 90,000 acres, but not yet sold.

*f* One-fifth of 1 mill tax, amounting to about $20,000 for the year 1881; there was also a special appropriation of $5,000 for building in that year.

*g* Income from all sources except tuition.

*h* Location not fixed, and college not organized at last report, 1880.

*i* Tuition in July, 1881, was made free; annual fees, $15.

*j* In 1879; exclusive of the value of apparatus.

*k* Entire proceeds of the sale of land scrip, the income of which, $17,914, is, by various acts of the legislature, divided between the State College at Athens and the branches at Cuthbert, Dahlonega, Milledgeville, and Thomasville.

*l* Amount received annually from the income of the public land scrip fund.

*m* Incidental fees.

*n* For expense other than instruction, $22½.

*o* Two students appointed by each of 92 counties under State law.

*p* Matriculation and incidental fees.

*q* Buildings not yet completed; $85,000 is the prospective value of grounds and buildings.

*r* Annual; depreciated in 1881 to $6,700.

*s* Also two years at sea.

*t* Students from Maryland and the District of Columbia were received free of tuition to the close of the year 1880–'81; from 1881–'82 all students pay $75.

*u* This appropriation for the years 1880 and 1881 was for building and equipment.

*v* Includes incidental fees.

*w* From rents and leases of lands.

*x* In 1879.

*y* See report of university (Table IX).

*z* To State students; $75 to others.

*aa* Income from land grant.

*bb* Value of equipment; for value of grounds and buildings, see Table IX.

*cc* Value of grounds and buildings as reported for 1879.

TABLE X.—PART 1.—*Statistics of schools of science (mining, engineering, agriculture, &c.) endowed with the national land grant, for* 1881, *&c.*—Continued.

* From Report of the Commissioner of Education for 1880.

*a* Number of scholarships in 1880 from the income of $50,000 which has accrued from the national grant and which is disbursed at the rate of $100 a scholarship annually.

*b* Reported with classical department (see Table IX).

*c* Agricultural funds only; for university funds, see Table IX.

*d* Principal of agricultural fund, the income of which is for this institution and the South Carolina Agricultural College at Orangeburg.

*e* To State students; $40 to others.

*f* Does not include amount arising from sale of congressional land grant.

*g* Income from land grant.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, agriculture, &c.) not endowed with the national land grant, for* 1881; *from replies to inquiries by the United States Bureau of Education.*

* From Report of the Commissioner of Education for 1880.

*a* Atlanta University, although not founded under the act of Congress establishing agricultural colleges, receives an annual appropriation of $8,000 from the legislature of Georgia under an act of 1874, entitled "An act equitably to adjust the claims of the colored people to a share of the agricultural land scrip."

*b* To be opened in March, 1883.

*c* The place of this college is supplied by the Massachusetts Agricultural College at Amherst. Each successful candidate is allowed, on entering the college, to matriculate also in Boston University, and at graduation may receive his degree at the hands of the university, with a diploma entitling him to the relation and privileges of its alumni.

*d* A department for elective graduate study only.

*e* There are also 33 students in the College of Music.

* From Report of the Commissioner of Education for 1880.

*a* Number of candidates for the degree of C. E. for the year ending June, 1881; after 1881 the degree of civil engineer will be conferred only as a second degree.

*b* In the elementary school of the Polytechnic Institute.

*c* Includes 101 students in Manual Training School; this school, organized in 1880, has a faculty of 10 and a course of study covering 3 years.

*d* See report of Stevens High School (Table VII).

*e* Catalogue 1881–'82 gives Rev. John Hall, D. D., chancellor ad interim.

*f* Reported with classical department (see Table IX).

*g* Graduating class June 16, 1880.

*h* A department of science and arts was created in 1881, part of its work being the maintenance of evening classes in geometry and mathematics and in elementary physics and mechanics. Instruction is given by lectures.

*i* Instruction was suspended in 1877 on account of unproductiveness of endowment funds, and has not yet been resumed.

*j* In the drawing schools and schools of mechanical handiwork.

*k* These statistics are from a return for 1878.

*l* Total number admitted during the year.

*m* Number attending the school of applied mathematics.

*n* Not fully organized.

TABLE X.—PART 2.—*Statistics of schools and of collegiate departments of science (mining, engineering, agriculture, &c.) not endowed, &c.*—Continued.

| | Name. | Number of State scholarships. | Number of other free scholarships. | Number of years in full course of study. | Number of weeks in scholastic year. | Annual charge to each student for tuition. | Libraries. | | | | Property, income, &c. | | | | | Date of next commencement. |

* From Report of the Commissioner of Education for 1880.

*a* ½ mill tax on all assessed property in the State.

*b* Atlanta University, although not founded under the act of Congress establishing agricultural colleges, receives an annual appropriation of $8,000 from the legislature of Georgia under an act of 1874, entitled "An act equitably to adjust the claims of the colored people to a share of the agricultural land scrip."

*c* The university is bound to receive, free of charge for tuition, one pupil for each member of the house of representatives.

*d* Reported with classical department (see Table IX).

*e* To be opened in March, 1883.

*f* Exclusive of a bequest of $105,000 not yet in possession of the institute authorities.

*g* The place of this college is supplied by the Massachusetts Agricultural College at Amherst. Each successful candidate is allowed on entering the college to matriculate also in Boston University, and at graduation may receive his degree at the hands of the university, with a diploma entitling him to the relation and privileges of its alumni.

*h* A department for elective graduate study only.

*i* There are also scholarships in the scientific school, not exceeding eight at any one time, of the annual value of $150 for graduates of the State normal schools.

*j* To residents of Worcester County; $150 to others.

*k* Entrance fee $10 and annual tax $20 to residents of Michigan; to others, fee and tax each $25.

*l* Includes valuation of Manual Training School.

*m* Value of apparatus.

*n* For all departments of the institution.

*o* Receipts from all sources.

*p* Number of free students.

*q* A Department of Science and Arts was created in 1881, part of its work being the maintenance of evening classes in geometry and mathematics and in elementary physics and mechanics. Instruction is given by lectures.

*r* Instruction was suspended in 1877 on account of unproductiveness of endowment funds, and has not yet been resumed.

*s* Includes endowment property.

*t* Including value of library, estimated at $40,000.

*u* These statistics are from a return for 1878.

*v* Includes value of museum and library.

*w* This number for all departments; all students from Virginia over eighteen years of age are admitted free of tuition.

*x* Tuition in each school.

*y* Not fully organized.

TABLE X.—*Memoranda.*

| Name. | Location. | Remarks. |
|---|---|---|
| Polytechnic College of the State of Pennsylvania | Philadelphia, Pa | Closed. |
| Norwich University | Northfield, Vt | Name changed to Lewis College. |
| New Market Polytechnic Institute | New Market, Va | No information received. |

* From Report of the Commissioner of Education for 1880.

*a* This institution does not confer degrees.

*b* This medical college is inaugurated under the auspices of a union with St. Paul Medical College; in April, 1880, the St. Paul Medical School became the department of medicine in Hamline University, but ceased to exist as such during the year 1881.

*c* Founded in 1845; reorganized in 1873.

*d* These are matriculates in the Nebraska School of Medicine, a preparatory medical school, which has since become Omaha Medical College.

*a* This library, organized in 1865, was closed in 1881; since the closing the books were damaged by fire and water and thereafter sold, producing the above reported fund of $5,000, the income from which is now used by the association for the rental of rooms of a branch of the Brooklyn Library.
*b* Circulating to members; free to visitors for use in the rooms.
*c* To inmates of the institution.
*d* To members.
*e* The income of $200.
*f* Hon. E. L. Pierce bought this library and sent it to St. Helena in the fall of 1881, but it was not shelved and catalogued until later.
*g* To students.

TABLE XVII.—*Statistics of training schools for nurses for* 1881; *from replies to inquiries by the United States Bureau of Education.*

| | Name. | Location. | Date of incorporation. | Date of organization. | Superintendent. | Number of instructors. | Present number of pupils. | Graduates in 1881. | Total number of pupils since organization. | Graduates since organization. | Number of years in full course of study. | Number of weeks in scholastic year. | Salary paid pupils. | Conditions of admission. |

* From Report of the Commissioner of Education for 1880.
*a* School for hearing youth, with classes for deaf-mutes.
*b* These statistics are for both departments of the institution.
*c* Drawing is also taught.
*d* Articulation and lip-reading are the basis of instruction in this institution.
*e* Higher branches also taught.
*f* Includes some income from other States.
*g* Includes $23,500 for improvements.
*h* $12,000 of this from the counties.
*i* This institution has three branches; one situated at Fordham, another at Brooklyn (510 Henry street), and another at Throg's Neck. The statistics given are for the three branches.
*j* A branch institution was opened at Tarrytown in October, 1879.
*k* In 1881.
*l* In 1879.
*m* From State and county appropriations.
*n* Up to the close of 1879.
*o* For two years.
*p* Temporarily closed.
*q* Includes $60,000 for new building.
*r* Drawing and painting are also taught.
*s* Includes $3,480 from last year.
*t* Congressional appropriation.
*u* An organization within the Columbia Institution; its statistics are there reported. See also Table IX.
*v* Value of grounds and buildings.

MEMORANDUM.—Free Evening Classes for Deaf-Mutes, New York, N. Y. (East Twenty-third street): removed; not found.

*p* Founded in 1854 as a department of the Michigan Institution for the Deaf and Dumb and the Blind.
*q* Brush making is also taught.
*r* Received from counties and individuals.
*s* Number of officers only.
*t* Includes income from all sources other than the State.
*u* Temporarily closed since 1879.
*v* Also brush and mat making and fine basket work.
*w* Includes personal property, funds, and investments.
*x* Including one quarter omitted in a former report. The regular annual appropriation from this State is $43,500, but owing to failures of the State treasurer to pay quarter bills the report of the past year shows six quarters with increased expenses. The net average expenses for each of the past three years were $56,064.

TABLE XIX.—*Statistics of institutions for the blind for* 1881; *from*

NOTE.—× indicates the employments taught;

| MECHANICS AND PHYSICS—Continued. | | | | | |
| Experimental Researches into the Properties and Motions of Fluids. By Wm. Ford Stanley. Illustrated. | E. & F. N. Spon | New York, N. Y. | 8vo | | $6 00 |
| Hand Book of Electrical Testing. By H. R. Kempe. New edition, revised and enlarged. Illustrated. | do | do | 8vo | 371 | 5 00 |
| Hydraulic, Steam, and Hand Power Lifting and Pressing Machinery. By Frederic Colyer. 73 plates. | do | do | 8vo | 120 | 7 25 |
| Quantity Surveying: for Use of Surveyors, Architects, Engineers, and Builders. By J. Leaning. | do | do | 8vo | 375 | 3 50 |
| Reference Book of Practical and Scientific Information for the use of Colliery Managers. By W. Wardle, M. E. C. E. Illustrated. To assist candidates in passing their examination. | do | do | 8vo | | 4 25 |
| Simple Hydraulic Formulæ. By T. W. Stone, C. E. Illustrated | do | do | 8vo | | 2 50 |
| Four Lectures on Static Electric Induction. By J. E. H. Gordon. Illustrated. | D. Van Nostrand | do | 12mo | | 80 |
| Induction Coils: How Made and How Used. Reprinted from eighth English edition. Illustrated. | do | do | 24mo | 2+123 | 50 |
| Kinematics of Machinery. By Alexander B. W. Kennedy. Two lectures relating to Reuleaux methods, delivered at South Kensington Museum. With an introduction by R. H. Thurston. Illustrated. | do | do | 16mo | 88 | 50 |
| Text Book of Elementary Mechanics. By Edward S. Dana. For the use of colleges and schools. Illustrated. | John Wiley & Sons | do | 12mo | 14+291 | 1 50 |
| A Catechism of the Marine Steam Engine. By Emory Edwards. For the use of engineers, firemen, and mechanics. Third edition revised, with additions. Illustrated with 63 engravings. | Henry Carey Baird & Co | Philadelphia, Pa. | 12mo | 414 | 2 00 |
| Modern American Marine Engines, Boilers, and Screw Propellers. By Emory Edwards. For the use of engineers, draughtsmen, and engineering students. Thirty plates. | do | do | 4to | 16+146 | 5 00 |
| Intermediate Lessons in Natural Philosophy. By E. J. Houston | Eldredge & Bros | do | 16mo | 20 | 90 |
| Elements of Natural Philosophy based on the Experimental Method. By Thos. R. Baker. | Porter & Coates | do | 12mo | 336 | 1 50 |
| Griffin's Natural Philosophy | Sower, Potts & Co | do | | | 1 10 |
| Working Drawings, and How to Make and Use Them. By Lewis M. Haupt. Designed for schools and artisans. | J. M. Stoddart & Co | do | 24mo | 70 | 60 |
| MEDICINE AND SURGERY. | | | | | |
| Lectures, Clinical and Didactic, on the Diseases of Women. By R. Ludlam, M. D. Fifth edition, revised and enlarged. Illustrated. | Duncan Bros | Chicago, Ill. | 8vo | 1,030 | 6 00 |
| Physiological Materia Medica. By W. H. Burt, M. D | Gross & Delbridge | do | 8vo | 980 | 7 00 |
| Naso-Pharyngeal Catarrh. By Martin F. Coomes, M. D | Bradley & Gilbert | Louisville, Ky | 12mo | 165 | 2 00 |

| | | | | | |
|---|---|---|---|---|---|
| Antiseptic Surgery. The Principles, Modes of Application, and Results of the Lister Dressing. By Just. Lucas-Championnière, M. D. Translated and edited by Frederic Henry Gerrish, M. D. | Loring, Short & Harmon | Portland, Me | 8vo | 232 | 2 25 |
| American Gynecological Society: Transactions for the year 1880. Vol. 5 | Houghton, Mifflin & Co. | Boston, Mass | 8vo | 8+470 | 5 00 |
| The Diagnosis and Treatment of Diseases of the Eye. By Henry W. Williams, M. D. Illustrated. | do | do | 8vo | 12+464 | 4 00 |
| The Bacteria. By Antoine Magnin. Translated by George M. Sternberg, M. D. | Little, Brown & Co | do | Sm. 8vo | | 2 50 |
| A Practical Treatise on Hernia. By Jos. H. Warren, M. D. New edition, revised and enlarged, with new illustrations. | James R. Osgood & Co | do | 8vo | | 5 00 |
| Indexes to Medical Literature. By Francis H. Brown, M. D | Riverside Press | Cambridge, Mass | 12mo | 8 | |
| Student's Manual of Histology. By Charles H. Stowell, M. D. For the use of students, practitioners, and microscopists. Illustrated. | George S. Davis | Detroit, Mich | 12mo | 290 | 2 00 |
| The Applied Anatomy of the Nervous System. By Ambrose L. Ranney, A. M., M. D. Illustrated. | D. Appleton & Co | New York, N. Y | 8vo | | 4 00 |
| General Physiology of Muscles and Nerves. By I. Rosenthal. Illustrated | do | do | 12mo | 16+324 | 1 50 |
| The Heart and its Function. Health Primers, No. 8. Illustrated | do | do | Sq. 24mo | 95 | 40 |
| Lectures upon the Diseases of the Rectum and the Lower Bowel. By W. H. Van Buren, M. D. New edition, enlarged. | do | do | 8vo | 412 | 3 00 |
| On the Antagonism between Medicines and between Remedies and Diseases. By Roberts Bartholow, M. D. | do | do | 8vo | 122 | 1 25 |
| The Science and Art of Midwifery. By William Thompson Lusk, M. D. Illustrated. | do | do | 8vo | 687 | 5 00 |
| Sight: Exposition of the Principles of Monocular and Binocular Vision. By Jos. Le Conte. Illustrated. | do | do | 12mo | 2+275 | 1 50 |
| Text Book of Human Physiology. By Austin Flint, jr., M. D. Third edition, revised and corrected. Illustrated. | do | do | 8vo | 977 | 6 00 |
| A Text Book of Practical Medicine. By Felix von Niemeyer. From the eighth German edition. By George H. Humphreys, M. D., and Charles E. Hackley, M. D. New revised edition, with additions. 2 volumes. | do | do | 8vo | 767; 861 | 9 00 |
| Treatise on the Diseases of the Nervous System. By William A. Hammond, M. D. Seventh edition, revised and enlarged. Illustrated. | do | do | 8vo. | 928 | 5 00 |
| A Medico-legal Treatise on Malpractice. By John J. Elwell, M. D. Fourth edition, revised and enlarged. | Baker, Voorhis & Co | do | 8vo | | 6 00 |
| Introduction: A Guide to Practical Work in Elementary Anatomy, Histology, and Experimental Physiology. By Burt G. Wilder, M. D., and Simon H. Gage. Illustrated. | A. S. Barnes & Co | do | 8vo | 56 | Paper, 50 |
| The Principles of Myodynamics. By J. S. Wight, M. D. Illustrated | Bermingham & Co | do | 12mo | 162 | 1 50 |
| Diseases of the Nervous System: Treatise on Spasmodic, Paralytic, Neuralgic, and Mental Affections. By Charles Porter Hart, M. D. Illustrated. For use of students and practitioners. | Boericke & Tafel | New York, N.Y., and Philadelphia, Pa. | 8vo | 16+9—409 | 3 00 |
| Guide to the Clinical Examination of Patients and the Diagnosis of Disease. By Richard Hagen, M. D. Translated from second revised and enlarged edition. By G. E. Gramm, M. D. | do | do | 12mo | 223 | 1 25 |
| Insanity and its Treatment. By Samuel Worcester, M. D. Lectures before the Boston University School of Medicine, 1879-1881. | do | do | 8vo | 462 | 3 50 |
| Ophthalmic Therapeutics. By George S. Horton, M. D. Second edition, rewritten and revised. | do | do | 8vo | 342 | 2 50 |
| Special Pathology and Diagnostics, with Therapeutic Hints. By C. G. Raue, M. D. Second edition, rewritten and enlarged. | do | do | 8vo | 1072 | 7 00 |
| Treatise on Diseases Peculiar to Infants and Children. By W. A. Edmonds, M. D. Text book for students and reference book for practitioners. | do | do | 8vo | 12+9—300 | 2 50 |
